River Variability And Complexity:

River Variability and Complexity Stanley A. Schumm, 2007-08-27 Rivers differ among themselves and through time An individual river can vary significantly downstream changing its dimensions and pattern dramatically over a short distance If hydrology and hydraulics were the primary controls on the morphology and behaviour of large rivers we would expect long reaches of rivers to maintain characteristic and relatively uniform morphologies In fact this is not the case the variability of large rivers indicates that other important factors are involved River Variability and Complexity presents an interesting approach to the understanding of river variability It provides examples of river variability and explains the reasons for them including fluvial response to human activities Understanding the mechanisms of variability is important for geomorphologists geologists river engineers and sedimentologists as they attempt to interpret ancient fluvial deposits or anticipate river behaviour at different locations and through time This book provides an excellent background for graduates researchers and professionals

Rivers and Society Malcolm Cooper, Abhik Chakraborty, Shamik Chakraborty, 2017-11-22 Rivers and their watersheds constitute some of the most dynamic and complex landscapes Rivers have sustained human communities and human societies have utilized and altered river flows in a number of ways for millennia However the level of human impact on rivers and on watershed environments has become acute during the last hundred years or so This book brings together empirical research and theoretical perspectives on the changing conditions of a range of river basin environments in the contemporary world including the history and culture of local societies living in these river basins It provides theoretical insights on the patterns and nature of the interaction between rivers and their use by human communities The chapters are written from a variety of positions including environmental science hydrology human ecology urban studies water management historical geography cultural anthropology and tourism studies The case studies span different geographical regions providing valuable insight on the multifaceted interactions between rivers and our societies and on the changing riverscapes in different parts of the world Specific detailed examples are included from Australia Brazil France India Iran Japan the Netherlands New Zealand South Africa UK and USA Chapter 11 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

River Flow 2020 Wim Uijttewaalt, Mário J. Franca, Daniel Valero, Victor Chavarrias, Clàudia Ylla Arbós, Ralph Schielen, Alessandra Crosato, 2020-08-27 Rivers form one of the lifelines in our society by providing essential services such as availability of fresh water navigation energy ecosystem services and flood conveyance Because of this essential role mankind has interfered continuously in order to benefit most and at the same time avoid adverse consequences such as flood risk and droughts This has resulted in often highly engineered rivers with a narrow set of functions In the last decades rivers are increasingly considered in a more holistic manner as a system with a multitude of interdependent processes River research and engineering has therefore added to the river fundamentals also themes like ecohydraulics

consequences of climate change and urbanisation River Flow 2020 contains the contributions presented at the 10th conference on Fluvial Hydraulics River Flow 2020 organised under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro Environment Engineering and Research IAHR What should have been a lively physical gathering of researchers students and practitioners was converted into an online event as the COVID 19 pandemic hindered international travelling and large gatherings of people Nevertheless the fluvial hydraulics community showed their interest and to be very much alive with a high number of participations for such event Since its first edition in 2002 in Louvain la Neuve this series of conferences has found a large and loyal audience in the river research and engineering community while being also attractive to the new researchers and young professionals This is highlighted by the large number of contributions applying for the Coleman award for young researchers and also by the number of applications and attendants to the Master Classes which are aimed at young researchers and students River Flow 2020 aims to provide an updated overview of the ongoing research in this wide range of topics and contains five major themes which are focus of research in the fluvial environment river fundamentals the digital river the healthy river extreme events and rivers under pressure Other highlights of River Flow 2020 include the substantial number of interdisciplinary subthemes and sessions of special interest The contributions will therefore be of interest to academics in hydraulics hydrology and environmental engineering as well as practitioners that would like to be updated about the newest findings and hot themes in river research and engineering

River Science David J. Gilvear, Malcolm T. Greenwood, Martin C. Thoms, Paul J. Wood, 2016-05-02 River Science is a rapidly developing interdisciplinary field at the interface of the natural sciences engineering and socio political sciences It recognises that the sustainable management of contemporary rivers will increasingly require new ways of characterising them to enable engagement with the diverse range of stakeholders This volume represents the outcome of research by many of the authors and their colleagues over the last 40 years and demonstrates the integral role that River Science now plays in underpinning our understanding of the functioning of natural ecosystems and how societal demands and historic changes have affected these systems The book will inform academics policy makers and society in general of the benefits of healthy functioning riverine systems and will increase awareness of the wide range of ecosystem goods and services they provide

Riverbank Erosion Hazards and Channel Morphodynamics Sourav Dey, Sujit Mandal, 2022-06-30 This book explores fluvial processes and their consequences on river dynamics in India It discusses the integration of geomorphic hydrologic and socio economic data with various policies and decisions regarding sustainable river basin management The volume looks at the origin and development of streams chronology of fluvial geomorphology fluvial system concept process form interaction river dynamics channel migration flow regime channel types and hydraulic and morphometric parameters and explains how changing hydro geomorphological dynamics have influenced land use patterns nature of fluids behaviour of floods etc It examines channel migration vulnerability and bank erosion hazard vulnerability of

Principles of Alluvial Fan Morphology Dan Bowman, 2018-11-09 This book offers a comprehensive overview of the alluvial fan phenomena including all terminology morphology sedimentology controlling factors processes and the human impact It combines the knowledge dispersed widely in existing literature with regional case studies color figures and photographs The chapters provide a useful basis to understand alluvial fans and a selection of papers attached to each chapter offers additional more focused reading This volume is aimed at engineers planners and especially students in earth sciences

Geomorphology Mateo Gutierrez, 2012-12-07 This book provides a detailed coverage of the landforms of Planet Earth and the processes that shaped them The study of these morphologies some of which formed during past geological periods under environmental conditions very different from those of today makes it possible to reconstruct the evolution of relief and to infer environmental changes

that have involved geological media the climate or human activity A major advance of Geomorphology in recent decades is the development of techniques that make it possible to quantify morphogenetic processes and rates at which forms change under different environmental conditions The development of Geochronology or absolute dating methods is helping us correct the limitations of relative dating that have prevailed in Geomorphology for many years The ability to assign numerical ages to both landforms and deposits opens up multiple possibilities for reconstructing the evolution of relief making correlations calculating rates and estimating recurrence periods A theme of major concern facing people today is the possible warming of the planet due to the release of greenhouse gases into the environment Investigations conducted by the scientific community show that this temperature increase is at least partially anthropogenic Given this more than probable cause and effect relationship the most sensible and prudent path is to design and apply mitigation measures to alleviate this heating that can negatively affect both the natural environment and human society The information that Geomorphology can provide on the recent past Historical Geomorphology may be very useful in making predictions on the activity of these potentially dangerous processes in the future and on the possible effects of environmental changes The aim of this book is to provide a general vision of the multiple aspects of Geomorphology and to provide a methodological foundation to approach the study of various branches of geomorphology To this end the book contains a basic bibliography that can be used for future research In addition applied aspects of Geomorphology are covered at the end of each chapter to provide knowledge of the activities of geomorphologists in the professional world

Gravel Bed Rivers Michael Church,Pascale Biron,Andre Roy,2012-01-30 Gravel Bed Rivers Processes Tools Environments presents a definitive review of current knowledge of gravel bed rivers derived from the 7th International Gravel bed Rivers Workshop the 5 yearly meeting of the world s leading authorities in the field Each chapter in the book has been specifically commissioned to represent areas in which recent progress has been made in the field The topics covered also represent a coherent progression through the principal areas of the subject hydraulics sediment transport river morphology tools and methods applications of science Definitive review of the current knowledge of gravel bed rivers Coverage of both fundamental and applied topics Edited by leading academics with contributions from key researchers Thoroughly edited for quality and consistency to provide coherent and logical progression through the principal areas of the subject

J. Davies, 2007 We are poised to embark on a new era of discovery in the study of geomorphology The discipline has a long and illustrious history but in recent years an entirely new way of studying landscapes and seascapes has been developed It involves the use of 3D seismic data Just as CAT scans allow medical staff to view our anatomy in 3D seismic data now allows Earth scientists to do what the early geomorphologists could only dream of view tens and hundreds of square kilometres of the Earth's subsurface in 3D and therefore see for the first time how landscapes have evolved through time This volume demonstrates how Earth scientists are starting to use this relatively new tool to study the dynamic evolution of a range of sedimentary environments CALFED Bay-Delta Program Programmatic EIS, Long-Term Comprehensive Plan to Restore Ecosystem Health and Improve Water Management, San Francisco Bay - Sacramento/San Joaquin River Bay-Delta D.Dsum; Program Goals and Objectives, Dapp1; No Action Alternative, ,2000 *Ecology of Desert Rivers* Richard Kingsford, 2006-06 Summarises current understanding of desert river ecology and its dependence on unpredictable river flows *River Futures* Gary J. Brierley, Kirstie A. Fryirs, 2012-09-26 Across much of the industrialized world rivers that were physically transformed and ecologically ruined to facilitate industrial and agricultural development are now the focus of restoration and rehabilitation efforts River Futures discusses the emergence of this new era of river repair and documents a comprehensive biophysical framework for river science and management The book considers what can be done to maximize prospects for improving river health while maintaining or enhancing the provision of ecosystem services over the next fifty to one hundred years It provides a holistic overview of considerations that underpin the use of science in river management emphasizing cross disciplinary understanding that builds on a landscape template The book frames the development of integrative river science and its application to river rehabilitation programs develops a coherent set of guiding principles with which to approach integrative river science considers the application of cross disciplinary thinking in river rehabilitation experiences from around the world examines the crossover between science and management outlining issues that must be addressed to promote healthier river futures Case studies explore practical applications in different parts of the world highlighting approaches to the use of integrative river science measures of success and steps that could be taken to improve performance in future efforts River Futures offers a positive practical and constructive focus that directly addresses the major challenge of a new era of river conservation and rehabilitation that of bringing together the diverse and typically discipline bound sets of knowledge and practices that are involved in repairing rivers It is a valuable resource for anyone involved in river restoration and management including restorationists scientists managers and policymakers as well as undergraduate and graduate students Fluvial Megafans on Earth and Mars Justin Wilkinson, Yanni Gunnell, 2023-05-18 An inventory of nearly 300
