Kanazawa Japan during December 12-14, 2009. The conference was jointly co-organized by the National Institute of Advanced Industrial Science and Technology (AIST) Japan and the Japan Advanced Institute of Science and Technology (JAIST). In addition, the event was supported by the Special Interest Group on Computer Security (CSEC) of the IPSJ, Japan, the Japan Technical Group on Information Security (ISEC) of the IEICE, the Japan Technical Committee on Information and Communication System Security (ICSS) of the IEICE, and the Society of Information Theory and its Applications (SITA) Japan, and co-sponsored by the National Institute of Information and Communications Technology (NICT) Japan, ComWorth Co., Ltd. Japan, Hitachi Ltd. Hokuriku Telecommunication Network Co., Inc., and Internet Initiative Japan, Inc. The conference received 109 submissions from 24 countries, out of which 32 were accepted for publication in these proceedings. At least three Program Committee (PC) members reviewed each submitted paper, while submissions co-authored by a PC member were submitted to the more stringent evaluation of *five* PC members. In addition to the PC members, many external reviewers joined the review process in their particular areas of expertise. We were fortunate to have this energetic team of experts and are deeply grateful to all of them for their hard work, which included a very active discussion phase almost as long as the initial individual reviewing period. The paper submission review and discussion processes were effectively and efficiently made possible by the Web-based system iChair.

Personal Networks Martin Jacobsson, Ignas Niemegeers, Sonia Heemstra de Groot, 2011-06-09. Written by experts in the field, this book describes the Personal Network architecture and its various components. This book focuses on networking and security aspects of Personal Networks (PNs). Given a single user, the authors propose an architecture for PNs in which devices are divided into one of two types of nodes: personal nodes and foreign nodes. Furthermore, the authors demonstrate the ways in which PNs can be formed in a self-organized and secure way, how they can be interconnected using infrastructure networks, how multiple PNs can be connected, and how their services and resources can be shared. In addition, the book shows how security and ease of use can be achieved through automatic configuration and how mobility can be supported through adaptability and self-organization. The motivations for the PN concept, the PN architecture, its functionalities and features, as well as future challenges, are covered in depth. Finally, the authors consider the potential applications for PNs and briefly discuss additional support systems for PN applications. The latter includes service discovery and context information management, among others.

Key Features Describes the PN network architecture and its various components in depth. Written by experts who developed this concept. Discusses the newer topic of federations of PNs.

Considers potential PN applications and demonstrates how applications support systems such as service discovery and context management can assist the applications Provides an insight into the challenges of future personal networking architectures for PNs potential and important solutions and their implications This book will serve as an invaluable reference for researchers developers and standardization experts in mobile and wireless communication systems and services It will also be of interest to postgraduate students in the field of telecommunications
