ancient sedimentary basins The science of stratigraphy and sedimentology is central to such endeavors but although several excellent textbooks on sedimentology have appeared in recent years little has been written about modern stratigraphic methods Sedimentology textbooks tend to take a theoretical approach building from physical and chemical theory and studies of modern environments It is commonly difficult to apply this information to practical problems in ancient rocks and very little guidance is given on methods of observation mapping and interpretation In this book theory is downplayed and the emphasis is on what a geologist can actually see in outcrops well records and cores and what can be obtained using geophysical techniques A new approach is taken to stratigraphy which attempts to explain the genesis of lithostratigraphic units and to de-emphasize the importance of formal description and naming There are also sections explaining principles of facies analysis basin mapping methods depositional systems and the study of basin thermal history so important to the genesis of fuels and minerals Lastly an attempt is made to tie everything together by considering basins in the context of plate tectonics and eustatic sea level changes

*A Fresh Look at Genesis 1-2* Gary W Schneider, 2021-03-15 One of this book's main themes is how God's Book of Nature is concordant with His Book of Scripture In their writings many of the pioneers of the Scientific Revolution often referred to God's two Books These brilliant naturalists were also devout Christians But that was back then Is modern science actually compatible with Scripture More to the point are the findings of 21st century science concordant with the Genesis creation story What else does the text of Genesis 1-2 have to say While making an honest effort to answer those questions some vitally important theological concepts which were introduced by Moses in the first two chapters of Genesis are also examined and discussed in this volume This comprehensive study on how modern science is concordant with the intended meaning of the text of Genesis 1-2 has many useful features including the following

Much of the first two parts of the book consists of background material on 1 logic 2 history and philosophy of science and 3 scientific method as well as 4 basic geological principles 5 descriptions of Plate Tectonic theory and 6 the principles and methods of radiometric dating This background material is designed to help the reader to understand the implications of the empirical evidence presented in Part Two God's Book of Nature Similarly there is also extensive material on 1 Biblical interpretation and hermeneutics 2 textual criticism 3 the history of ancient Israel 4 development of the Hebrew language and 5 some of the basic elements of Biblical Hebrew This material is given prior to looking at the literary structure and genre of the Genesis 1-2 text and then conducting thorough and complete exegetical analyses of the various textual units of Genesis 1-2 in Part Four God's Book of Scripture Prior to the exegetical analyses for each of the textual units of Genesis 1-2 1 the Biblical Hebrew text 2 a standard English translation and 3 an Interlinear version of the text of that unit are provided The Interlinear version consists of a the Hebrew text with b SBL transliterations and c English glosses below each one of the Hebrew words Color coding and other types of annotations highlighting are used throughout Part Four God's Book of Scripture in order to help the reader identify important Biblical Hebrew elements including recurring phrases important BH
