Seed Fate Predation Dispersal And Seedling Establishment:

Seed Fate J. E. Lambert, P. E. Hulme, S. B. Vander Wall, 2005 This book presents current knowledge of seed fate in both natural and human disturbed landscapes from various regions of the world Habitats considered range from mountain and arid deserts in the temperate zone to savanna and lowland rainforests in tropical regions of the world Particular attention is paid to plant diversity conservation when seed removal is affected by factors such as hunting habitat fragmentation or intensive logging Contributors include leading scientists involved in research on seed ecology and on animal plant relationships from the perspective of both primary and secondary seed dispersal and predation *Seed Fate: Predation, Dispersal and Seedling Establishment* Pierre-Michel Forget, 2005 This book presents current knowledge of seed fate in both natural and human disturbed landscapes from various regions of the world Habitats considered range from mountains and arid deserts in the temperate zone to savannas and lowland rain forests in tropical regions Particular attention is paid to plant diversity conservation when seed removal is affected by factors such as hunting habitat fragmentation or intensive logging Seed Dispersal Andrew J. Dennis, R.J. Green, E.W. Schupp, 2007 Fresh concepts in the study of seed dispersal are spurring a host of exciting new questions new answers to old questions new methods and approaches and a reinvigoration of the field *Seed Dispersal Theory and its Application in a Changing World* presents both recent advances and reviews of current knowledge demonstrating the vigour and vibrancy of the field It provides new perspectives and directions at a time when efforts to meet growing environmental challenges threatening natural systems are of utmost importance

Hardwood Reforestation and Restoration Daniel Gagnon, Benoit Truax, 2019-04-25 Hardwood dominated temperate forests mostly in Eastern North America Europe North East Asia provide valuable renewable timber and numerous ecosystem services Many of these forests have been subjected to harvesting or conversion to agriculture sometimes over centuries that have greatly reduced their former extent and diversity Natural regeneration following harvesting or during post agricultural succession has often failed to restore these forests adequately Past harvesting practices and the valuable timber of some species have led to a reduction in their abundance The loss of apex predators has caused herbivore populations to increase and exert intense browsing pressure on hardwood regeneration often preventing it Particularly important are fruit nut and acorn bearing species because of their vital role in forest food webs and biodiversity Restoring hardwood species to natural forests in which they were formerly more abundant will require a number of forest management actions e g resistant hybrids deer exclosures protectors enrichment planting underplanting etc Similarly reforesting areas that were once natural forests will also require new silvicultural knowledge Global warming trends will intensify the need for interventions to maintain the diversity and function of temperate hardwood forests as well as for increase hardwood reforestation *Field and Laboratory Methods in Primatology* Joanna M. Setchell, Deborah J. Curtis, 2011-02-03 Building on the success of the first edition and bringing together contributions from a range of experts in the field the second edition of this guide to research on wild

primates covers the latest advances in the field including new information on field experiments and measuring behaviour It provides essential information and advice on the technical and practical aspects of both field and laboratory methods covering topics such as ethnoprimateology remote sensing GPS and radio tracking trapping and handling dietary ecology and non invasive genetics and endocrinology This integrated approach opens up new opportunities to study the behavioural ecology of some of the most endangered primates and to collect information on previously studied populations Chapters include methodological techniques instructions on collecting processing and preserving samples data for later analysis ethical considerations comparative costs and further reading making this an invaluable tool for postgraduate students and researchers in primatology behavioural ecology and zoology

Oak Seed Dispersal Michael A. Steele, 2021-01-05 The definitive examination of oak forest evolutionary ecology Seed dispersal is a critical stage in the life cycle of most flowering plants The process can have far reaching effects on a species biology especially numerous aspects of its ecology and evolution This is particularly the case for the oaks in which the dispersal of the acorn is tied to numerous tree characteristics as well as the behavior and ecology of the animals that feed on and move these seeds to their final destination Forest structure composition and genetics often follow directly from the dispersal process while also influencing it in turn In *Oak Seed Dispersal* Michael A Steele draws on three decades of field research across the globe e g the United States Mexico Central America Europe and China to describe the interactions between oaks and their seed consumers Rodents birds and insects he writes collectively influence the survival movement and germination of acorns as well as the establishment of seedlings often indicating a coevolutionary bond between oaks and their seed consumers This bond can only be understood by unraveling the complex interactions that occur in the context of factors such as partial seed consumption due to acorn chemistry scatterhoarding predation of the seed consumers by other organisms and the limiting effects of masting on insect rodent and jay damage Offering new insights on how animal mediated dispersal drives ecological and evolutionary processes in forest ecosystems *Oak Seed Dispersal* also includes an overview of threatened oak forests across the globe and explains how a lack of acorn dispersal contributes to many important conservation challenges Highly illustrated the book includes photographs of key dispersal organisms and tactics as well as a foreword by Stephen B Vander Wall a leading authority on food hoarding and animal mediated seed dispersal and beautiful artwork by Tad C Theimer also an accomplished ecologist

Seedling Ecology and Evolution Mary Allesio Leck, V. Thomas Parker, Robert L. Simpson, 2008-09-18 Seedlings are highly sensitive to their environment After seeds they typically suffer the highest mortality of any life history stage This book provides a comprehensive exploration of the seedling stage of the plant life cycle It considers the importance of seedlings in plant communities environmental factors with special impact on seedlings the morphological and physiological diversity of seedlings including mycorrhizae the relationship of the seedling with other life stages seedling evolution and seedlings in human altered ecosystems including deserts tropical rainforests and habitat restoration projects The diversity of seedlings is

portrayed by including specialised groups like orchids bromeliads and parasitic and carnivorous plants Discussions of physiology morphology evolution and ecology are brought together to focus on how and why seedlings are successful This important text sets the stage for future research and is valuable to graduate students and researchers in plant ecology botany agriculture and conservation *Restoration of Boreal and Temperate Forests* John A. Stanturf,2015-08-14 This substantially updated new edition reflects the growing recognition that large areas of forests are degraded globally This edition describes forest restoration in the context of rapid social economic environmental and climate change Covering the last decade s significant advances in forest restoration concepts and practice this edition has 16 new chapters and 19 thoroughly revised chapters This book is an excellent source of information for researchers managers policymakers and graduate students in forestry and ecology Amazon Fruits: An Ethnobotanical Journey Nigel Smith,2023-09-26 This is the first comprehensive listing of Amazon fruits from an ethnobotanical perspective This detailed book covers 50 botanical families 207 species in the Amazon including how the people of each region use them It is lavishly illustrated with high quality photographs taken by the author an extensive list of references and Dr Smith s latest meticulous research This book should be a foundational work for scholars working in the plant sciences researchers in ethnobotanical studies and general interest scholars seeking more detailed information on the latest research by a leading scientist in the Amazon Forest Ecology and Conservation Adrian Newton,2007-05-17 Forest conservation has become one of the most important environmental issues currently facing humanity as a result of widespread deforestation and forest degradation Pressures on remaining natural forests continue to intensify leading to high rates of biodiversity loss Understanding how human activities influence ecological processes within forests is essential for developing effective conservation action This book describes research methods and techniques relevant to understanding forest ecology with a particular focus on those that are relevant to practical conservation and sustainable forest management This information is currently disparate and difficult to locate and as with other books in this series the intention is to provide a comprehensive synthesis for use by graduate students researchers and practising conservationists Methods are presented for assessing forest extent and condition structure and composition and forest dynamics at a variety of scales Techniques for assessing genetic variation and reproductive ecology and for evaluating the habitat value of forests are also described Particular emphasis is given to state of the art techniques such as remote sensing GIS computer modelling and molecular markers However traditional methods of forest mensuration and ecological survey are also presented The methods and techniques described are generally applicable to all forest types including both temperate and tropical forest ecosystems
