"Pub. No 249" Dominique F. Prinet, 2014-07-17 This manual has grown out of all the courses given by Dominique Prinet a
 certified Instructor Evaluator for Sail Canada who has been teaching celestial navigation since 2000 It has benefitted from
 the thoughtful contributions of over 100 students The aim of Celestial Navigation is to give a sufficient grounding in the
 subject to determine position at sea using a sextant for fixes on the sun moon stars and planets Furthermore the material
 presented will prepare a reader who wishes to pursue a Celestial Navigation Certificate through self study The subject
 requires some comfort with the basic concepts of navigation but the prospective navigator only needs to know how to add
 and subtract either times or angles Lucid and well paced Celestial Navigation starts with fundamentals and definitions which
 ensure that a motivated student need not bring anything more to the table than his or her willingness to master the subject
 Richly illustrated it includes a chapter with more than forty pages of review exercises covering all topics The cleverness of
 many of the concepts explained here will bring about great intellectual joy and satisfaction Whether you are a recreational
 sailor or an individual pursuing professional certification as a navigator Celestial Navigation will teach you what you need to
 know The Practical Guide to Celestial Navigation Phil Somerville, 2022-01-04 The jargon free guide to celestial navigation
 know what to do step by step understand why you re doing it and be confident that you can put it into practice when on
 board Did you know that a person standing on the equator is effectively travelling at 900mph And did you know that you can
 use this information to work out where you are in the world to an accuracy of about 3 4 miles No GPS no computers Just a
 sextant some tables from an Almanac and the knowledge in this book It s the only back up if the GPS goes down so it s a
 matter of safety So if you want to qualify as a commercial skipper superyacht captain you need to know how to carry out
 celestial navigation And if you want to pass the RYA Ocean Yachtmaster exam you need to know it too It s a major stumbling
 block for many sailors wanting or needing to take their next qualifications and the other books on the market are complex
 and often assume some prior understanding This book fulfils the need for a jargon free explanation of celestial navigation
 illustrated with colour diagrams and including unique checklist sheets to enable you to repeat all those calculations you
 learned back at home when you re on deck Without overwhelming the reader with a load of theory from the off the author
 breaks down what you need to do step by step explaining why at every point giving the information context and making it

more interesting and memorable He has trained students in this subject for years and here he s able to use his experiences of what works and what are the common pitfalls he even includes a What went wrong chapter near the end going through errors commonly made and how to spot them The objective is that readers will finish the book not only knowing what to do but really understanding why and being able to make sense of it all again later rather than just getting through and exam and finding themselves at a loss when on deck The author also includes time tested proformas quick reference sheets that sailors can refer to when they come to putting the theory into practice on board avoiding the terrifying cold start that most sailors experience when they suddenly need to put theory into practice
