Longevity Senescence And The Genome:

Longevity, Senescence, and the Genome Caleb E. Finch, 1994 **Life-Span Extension** Christian Sell, Antonello Lorenzini, Holly M. Brown-Borg, 2009-07-27 In recent years remarkable discoveries have been made concerning the underlying mechanisms of aging In *Life Span Extension Single Cell Organisms to Man* the editors bring together a range of illuminating perspectives from researchers investigating the aging process in a variety of species This novel work addresses the aging process in species ranging from yeast to man and among other subjects features detailed discussions of the naked mole rat an exceptionally long lived rodent the relationship between dietary factors food restriction and aging and an evolutionary view of the human aging process Single mutations that extend life span have been identified in yeast worms flies and mice whereas studies in humans have identified potentially important markers for successful aging At the same time it has been discovered that the genes and pathways identified in these studies involve a surprisingly small set of conserved functions most of which have been the focus of aging research for some time For example the mTOR pathway a regulator of translation and protein synthesis has been identified as a common longevity pathway in yeast and *Caenorhabditis elegans* In mammals this pathway intersects with neuroendocrine pathways and with the insulin like growth factor pathways which have been identified as major modulators of life span and aging in both invertebrates and mice Novel emerging technologies and the increasingly wide variety of systems that are now used to study aging and the mechanisms of aging provide enormous opportunities for the identification of common pathways that modulate longevity It is these common pathways that are the focus of this important volume **Brocklehurst's Textbook of Geriatric Medicine and Gerontology E-Book** Howard M. Fillit, Kenneth Rockwood, John B Young, 2016-05-06 The leading reference in the field of geriatric care Brocklehurst's Textbook of Geriatric Medicine and Gerontology 8th Edition provides a contemporary global perspective on topics of importance to today's gerontologists internal medicine physicians and family doctors An increased focus on frailty along with coverage of key issues in gerontology disease specific geriatrics and complex syndromes specific to the elderly makes this 8th Edition the reference you'll turn to in order to meet the unique challenges posed by this growing patient population Consistent discussions of clinical manifestations diagnosis prevention treatment and more make reference quick and easy More than 250 figures including algorithms photographs and tables complement the text and help you find what you need on a given condition Clinical relevance of the latest scientific findings helps you easily apply the material to everyday practice A new chapter on frailty plus an emphasis on frailty throughout the book addresses the complex medical and social issues that affect care and the specific knowledge and skills essential for meeting your patients complex needs New content brings you up to date with information on gerontechnology emergency and pre hospital care HIV and aging intensive treatment of older adults telemedicine the built environment and transcultural geriatrics New editor Professor John Young brings a fresh perspective and unique expertise to this edition *Aging and the Heart* José

Marín-García,2007-12-07 In this book the genetic and molecular basis of cardiovascular aging is examined in detail and a comprehensive assessment given of the bioenergetics changes occurring in human and animal models of cardiac aging Both current diagnostic and future therapeutic modalities are presented giving this book a dual pronged approach Cardiac aging like aging in general is a complex process involving numerous cellular and molecular changes This book sheds new light on the phenomenon *Chromosomal Instability and Aging* Fuki Hisama,Sherman M. Weissman,George M. Martin,2003-01-29

This text examines the relationship between DNA damage and repair cellular senescence genomic instability and aging The authors provide in depth discussions of various types of DNA damage the DNA repair network and cellular responses to genetic damage to assess their impact on the modulation of aging processes and age related diseases including cancer development *Chromosomal Instability and Aging* describes cloning genes for human chromosomal instability disorders the causal factors and consequences of chromosomal injury the telomere hypothesis of aging and age dependant mitochondrial genetic instability It includes more than 2200 references to facilitate further research making it an informative and timely guide *Handbook of Models for Human Aging* P. Michael Conn,2011-04-28

The Handbook of Models for Human Aging is designed as the only comprehensive work available that covers the diversity of aging models currently available For each animal model it presents key aspects of biology nutrition factors affecting life span methods of age determination use in research and disadvantages advantages of use Chapters on comparative models take a broad sweep of age related diseases from Alzheimer s to joint disease cataracts cancer and obesity In addition there is an historical overview and discussion of model availability key methods and ethical issues Utilizes a multidisciplinary approach Shows tricks and approaches not available in primary publications First volume of its kind to combine both methods of study for human aging and animal models Over 200 illustrations **Crossing Frontiers** W. Andrew Achenbaum,1995-08-25

This is the first book length study of the history of gerontology It shows how old age became a problem worth investigating and how a multidisciplinary orientation took shape *Handbook of the Biology of Aging* Nicolas Musi,Peter Hornsby,2021-01-19 *Handbook of the Biology of Aging* Ninth Edition provides a comprehensive synthesis and review of the latest and most important advances and themes in modern biogerontology The book focuses on the trend of big data approaches in the biological sciences presenting new strategies to analyze interpret and understand the enormous amounts of information being generated through DNA sequencing transcriptomic proteomic and metabolomics methodologies applied to aging related problems Sections cover longevity pathways and interventions that modulate aging innovative tools that facilitate systems level approaches to aging research the mTOR pathway and its importance in age related phenotypes and much more Assists researchers in keeping abreast of research and clinical findings outside their subdiscipline Helps medical behavioral and social gerontologists understand what basic scientists and clinicians are discovering Includes new chapters on genetics evolutionary biology bone aging and epigenetic control Examines the diverse research being conducted in the study of the biology of aging Oxford

Textbook of Geriatric Medicine Jean-Pierre Michel, B. Lynn Beattie, Finbarr C. Martin, Jeremy D. Walston, 2018 The third edition of the definitive international reference book on all aspects of the medical care of older persons will provide every physician involved in the care of older patients with a comprehensive resource on all the clinical problems they are likely to encounter as well as on related psychological philosophical and social issues

The Molecular Genetics of Aging

Siegfried Hekimi, 2012-12-06 The molecular genetics of aging or life span determination is an expanding field One reason is because many people would consider it desirable if human life span could be extended Indeed it is difficult not to be fascinated by tales of the life and death of people who have succeeded in living a very long life Because of this we have placed at the head of this book the chapter by Perls et al on Centenarians and the Genetics of Longevity Perls and his coauthors convincingly argue that while the average life expectancy might be mostly determined by environmental factors because the average person has an average genotype extremely long life spans are genetically determined Of course studying humans to uncover the genetics of aging is not ideal not so much because one cannot easily perform experiments as because they live such a long time This is why most of this book describes the current state of research with model organisms such as yeast worms flies and mice Jaswinski focuses on yeast and how metabolic activity and stress resistance affect the longevity of *Saccharomyces cerevisiae* In the process he discusses the concept of aging as applied to a unicellular organism such as yeast and the importance of metabolism and stress resistance for aging in all organisms
