longitudinal data derived from the NICHD Study of Early Child Care and Youth Development SECCYD Key Features Provides easy to follow didactic examples of several common growth modeling approaches Highlights recent advancements regarding the treatment of missing data parameter estimation and model fit Explains the commonalities and differences between latent growth model and multilevel modeling of repeated measures data Covers the basic linear latent growth model and builds from there to describe more complex functional forms such as polynomial latent curves multivariate latent growth curves time varying covariates predictors of aspects of change cohort sequential designs and multiple group models

Secondary Statistical Modeling with the National Assessment of Adult Literacy David Kaplan, 2000 This paper offers recommendations to the National Center for Education Statistics NCES on the development of the background questionnaire for the National Assessment of Adult Literacy NAAL The recommendations are from the viewpoint of a researcher interested in applying sophisticated statistical models to address important issues in adult literacy The paper focuses on five issues each of which is the subject of a section of the paper sampling selection bias measurement policy modeling and gauging cohort effects Each section considers the scope of the issue and then makes recommendations to NCES These recommendations include providing all appropriate sampling weights in NAAL data examining contextual effects on the distribution of literacy ability in the population considering relevant auxiliary variables that would constitute the selection equation considering the hypothesized number of factors and including at least four variables measuring each factor in the questionnaire obtaining retrospective data on general and job specific literacy related activities and exploring the possibility of linking NAAL with existing longitudinal surveys Contains 21 references YLB

Applied Multiway Data Analysis Pieter M. Kroonenberg, 2008-03-11 From a preeminent authority a modern and applied treatment of multiway data analysis This groundbreaking book is the first of its kind to present methods for analyzing multiway data by applying multiway component techniques Multiway analysis is a specialized branch of the larger field of multivariate statistics that extends the standard methods for two way data such as component analysis factor analysis cluster analysis correspondence analysis and multidimensional scaling to multiway data Applied Multiway Data Analysis presents a unique thorough and authoritative treatment of this relatively new and emerging approach to data analysis that is applicable across a range of fields from the social and behavioral sciences to agriculture environmental sciences and chemistry General introductions to multiway data types methods and estimation procedures are provided in addition to detailed explanations and advice for readers who would like to learn more about applying multiway methods Using carefully laid out examples and engaging applications the book begins with an introductory chapter that serves as a general overview of multiway analysis including the types of problems it can address Next the process of setting up carrying out and evaluating multiway analyses is discussed along with commonly encountered issues such as preprocessing missing data model and dimensionality selection postprocessing and transformation as well as robustness and stability issues Extensive examples are presented within a unified framework

consisting of a five step structure objectives data description and design model and dimensionality selection results and their interpretation and validation Procedures featured in the book are conducted using 3WayPack which is software developed by the author and analyses can also be carried out within the R and MATLAB systems Several data sets and 3WayPack can be downloaded via the book s related Web site The author presents the material in a clear accessible style without unnecessary or complex formalism assuring a smooth transition from well known standard two analysis to multiway analysis for readers from a wide range of backgrounds An understanding of linear algebra statistics and principal component analyses and related techniques is assumed though the author makes an effort to keep the presentation at a conceptual rather than mathematical level wherever possible Applied Multiway Data Analysis is an excellent supplement for component analysis and statistical multivariate analysis courses at the upper undergraduate and beginning graduate levels The book can also serve as a primary reference for statisticians data analysts methodologists applied mathematicians and social science researchers working in academia or industry Visit the Related Website <http://three-mode.leidenuniv.nl> to view data from the book
