Recent Microwave Technologies Ahmed Kishk, Kim Ho Yeap, 2022-08-25 Microwave bands range from 300 MHz to 300 GHz of the electromagnetic spectrum These signals can be used in communication networking astronomy and biomedical engineering among other fields This book provides a comprehensive overview of the physics of microwave signals techniques for modeling these signals uses of these signals in various fields and the underlying principles of some of the latest microwave devices currently available

Advances in Microwave-assisted Heterogeneous Catalysis Jianli Hu, Benjaram M Reddy, 2023-11-03 Historically the field of heterogeneous catalysis has focused on the design and optimisation of the catalytic materials However as these optimisations start to reach diminishing returns attention has turned to non conventional means for improving reaction conditions such as the use of ultrasound plasma electromagnetic heating and microwave heating Microwave assisted catalysis has been demonstrated to be useful in a wide range of applications including ammonia synthesis desulfurization and production of chemicals from biomass Advances in Microwave assisted Heterogeneous

Catalysis begins with the basics of microwave heating and the role of microwaves in heterogeneous catalysis. It goes on to cover the mechanisms of microwave specific reaction rate enhancement, microwave assisted synthesis of porous nonporous and supported metal catalysts, microwave augmented reactor technology and microwave induced catalysis. The application of microwave assisted heterogeneous catalysis in various fields of energy conversion, environmental remediation and bulk and specialty chemicals synthesis are also discussed, making this a great reference for anyone involved in catalysis research.

Oncothermia: Principles and Practices Andras Szasz, Nora Szasz, Oliver Szasz, 2010-11-23. Oncothermia is the next generation medical innovation that delivers selective controlled and deep energy for cancer treatment. The basic principles for oncothermia stem from oncological hyperthermia, the oldest approach to treating cancer. Nevertheless, hyperthermia has been wrought with significant controversy, mostly stemming from shortcomings of controlled energy delivery. Oncothermia has been able to overcome these insufficiencies and prove to be a controlled, safe and efficacious treatment option. This book is the first attempt to elucidate the theory and practice of oncothermia based on rigorous mathematical and biophysical analysis, not centered on the temperature increase. It is supported by numerous in vitro and in vivo findings and twenty years of clinical experience. This book will help scientists, researchers and medical practitioners in understanding the scientific and conceptual underpinnings of oncothermia and will add another valuable tool in the fight against cancer. Professor Andras Szasz is the inventor of oncothermia and the Head of St Istvan University's Biotechnics Department in Hungary. He has published over 300 papers and lectured at various universities around the world. Dr. Oliver Szasz is the managing director of Oncotherm, the global manufacturer and distributor of medical devices for cancer treatment used in Europe and Asia since the late 1980s. Dr. Nora Szasz is currently a management consultant in healthcare for McKinsey Co. [Tunable Materials with](#)

[Applications in Antennas and Microwaves](#) John N. Sahalos, George A. Kyriacou, 2022-06-01. Tunable Materials with Applications in Antennas and Microwaves is a stimulating topic in these modern times. With the explosion of the new generation of the wireless world, greater emphasis than ever before is being placed on the analysis and applications of modern materials. This book describes the characteristics of Ferrites and Ferroelectrics and introduces the reader to Multiferroics. Represents in a simple manner the solid state physics and explains the permittivity and permeability tensor characteristics for the tunable materials of infinite and finite dimensions. Gives the applications of tunable materials in resonators, filters, microstrips, striplines, antennas, phase shifters, capacitors, varactors and frequency selective surfaces. Describes in detail the mathematical analysis for spin and magnetostatic waves for infinite medium thin slab films and finite circular discs. The analysis contains original work which the reader may extend in the future. Provides multiferroics which are ferrite and ferroelectric composites. Multiferroics are very promising tunable materials which are believed will offer many applications in the near future. Contains the planar transmission lines with analytic formulas for multilayer microstrips, transmission lines and waveguides with isotropic as well as anisotropic dielectric and magnetic materials. Also gives the

formulas to analyze the layered category of transmission lines with multiferroics This book is intended for antenna and microwave engineers as well as for graduate students of Materials Science and Engineering Electrical Computer Engineering and Physics Departments
