New Kids On The Net:

Japanese Influence on American Children's Television Gina O'Melia, 2019-07-11 Japanese Influence on American Children's Television examines the gradual yet dramatic transformation of Saturday morning children's programming from being rooted in American traditions and popular culture to reflecting Japanese popular culture In this modern era of globalization and global media cultural convergence the book brings to light an often overlooked phenomenon of the gradual integration of narrative and character conventions borrowed from Japanese storytelling into American children's media The book begins with a brief history of Saturday morning in the United States from its earliest years and the interaction between American and Japanese popular media during this time period It then moves onto reviewing the dramatic shift that occurred within the Saturday morning block through both an overview of the transitional decades as well as an in depth analysis of the transformative ascent of the shows Mighty Morphin Power Rangers Pok mon and Yu Gi Oh

Issues in Web-Based Pedagogy Robert A. Cole, 2000-06-30 There has been an explosion of Web based courses in higher education Aiming at an interdisciplinary audience the contributors draw upon diverse philosophical and empirical backgrounds to make claims about Web based pedagogy Among the points they raise is the concern that education is more easily commodified through Internet technologies implying that traditional faculty roles in teaching and research are at risk Moreover current understandings of what it means to be a teacher or a student are undergoing redefinition as a result of these new distance learning technologies The contributors note that Web based pedagogy is associated with sound instruction when particular strategies are adopted As a corollary this form of teaching is least effective when attempts are made to directly translate traditional styles of teaching Political social and economic interests are competing to shape the direction that online education will take The authors argue that opportunities exist for administrators and faculty to define the terms under which Web based learning will occur in their institutions

Steinert, 2000 The art of creating a Web site is one that has emerged and been refined since the explosion of the Internet as a communications medium But unlike authors filmmakers musicians and visual artists the faces behind even the most popular Web sites remain hidden This book goes behind the Web curtain to reveal the personalities behind 35 of the most interesting Web sites on the Internet today Interviews with the creators of sites for everything from wedding resources and action figure collecting to misheard song lyrics and movie reviews reveal the motivations for and experiences in starting and growing Web sites This book provides insights for people watchers who are curious about the faces behind the sites and for anyone interested in building an original Web site

Network Science, A Decade Later Alan Feldman, Cliff Konold, Bob Coulter, Brian Conroy, 2000-01-12 Network Science A Decade Later the result of NSF funded research that looked at the experiences of a set of science projects which use the Internet offers an understanding of how the Internet can be used effectively by science teachers and students to support inquiry based teaching and learning The book emphasizes theoretical and critical perspectives and is intended to

raise questions about the goals of education and the ways that technology helps reach those goals and ways that it cannot. The theoretical perspective of inquiry based teaching and learning in which the book is grounded is consistent with the current discipline based curriculum standards and frameworks. The chapters in Part I State of the Art describe the history and current practice of network science. Those in Part II Looking Deeply extend the inquiry into network science by examining discourse and data in depth using both empirical data and theoretical perspectives. In Part III Looking Forward the authors step back from the issues of network science to take a broader view focusing on the question How should the Internet be used and not used to support student learning. The book concludes with a reminder that technology will not replace teachers. Rather the power of new technologies to give students both an overwhelming access to resources experts peers teachers texts images and data and the opportunity to pursue questions of their own design increases the need for highly skilled teachers and forward looking administrators. This is a book for them and for all educators policymakers students involved in science and technology education.
