Export Product Quality, Renewable Energy, and Sustainable Production Umer Shahzad, Gagan Deep Sharma, Lianbiao Cui, John Mendy, 2023-09-12 Economic development has long been acknowledged for its beneficial effects on human well being In the context of economic globalization and vertical specialization increasing the quality of export products is more critical and necessary to export success and sustainable development The product s quality is inextricably linked to its manufacture and production which need various types of energy and raw materials Meanwhile the adoption of more environmentally friendly and cleaner energy sources contributes to the achievement of sustainable production Therefore product quality may provide a new perspective from which to investigate the systematic relationship between greener and renewable energy sources sustainable production and environmental regulations as well as the nature of export competitiveness Generally export product quality has referred to the quality of manufactured products within the product lines Quality refers to the relative price of a country s varieties within their respective product lines Product sophistication assesses the composition of the aggregate exports Different varieties of same product as per quality level are being produced by several developing and emerging economies Within any given product line quality converges both conditionally and unconditionally to the world s benchmark increases in institutional quality and human capital are associated with faster quality upgrading In turn faster growth in quality is associated with more rapid output growth Energy Research Abstracts ,1986 **Economic Growth and Environmental Quality in a Post-Pandemic World** Muhammad

Shahbaz, Daniel Balsalobre Lorente, Rajesh Sharma, 2023-07-28 In response to the damage caused by a growth led global economy researchers across the world started investigating the association between environmental pollution and its possible determinants using different models and techniques Most famously the environmental Kuznets curve hypothesizes an inverted U shaped association between environmental quality and gross domestic product GDP This book explores the latest literature on the environmental Kuznets curve including developments in the methodology the impacts of the pandemic and other recent findings Researchers have recently broadened the range of the list of drivers of environmental pollution under consideration which now includes variables such as foreign direct investment trade expansion financial development human activities population growth and renewable and nonrenewable energy resources all of which vary across different countries and times And in addition to CO2 emissions other proxies for environmental quality such as water land and ecological footprints have been used in recent studies This book also incorporates analysis of the relationship between economic growth

and the environment during the COVID 19 crisis presenting new empirical work on the impact of the pandemic on energy use the financial sector trade and tourism Collectively these developments have improved the direction and extent of the environmental Kuznets curve hypothesis and broadened the basket of dependent and independent variables which may be incorporated This book will be invaluable reading for researchers in environmental economics and econometrics *Recent Advances and Future Directions in Causality, Prediction, and Specification Analysis* Xiaohong Chen, Norman R.

Swanson, 2012-08-01 This book is a collection of articles that present the most recent cutting edge results on specification and estimation of economic models written by a number of the world's foremost leaders in the fields of theoretical and methodological econometrics Recent advances in asymptotic approximation theory including the use of higher order asymptotics for things like estimator bias correction and the use of various expansion and other theoretical tools for the development of bootstrap techniques designed for implementation when carrying out inference are at the forefront of theoretical development in the field of econometrics One important feature of these advances in the theory of econometrics is that they are being seamlessly and almost immediately incorporated into the empirical toolbox that applied practitioners use when actually constructing models using data for the purposes of both prediction and policy analysis and the more theoretically targeted chapters in the book will discuss these developments Turning now to empirical methodology chapters on prediction methodology will focus on macroeconomic and financial applications such as the construction of diffusion index models for forecasting with very large numbers of variables and the construction of data samples that result in optimal predictive accuracy tests when comparing alternative prediction models Chapters carefully outline how applied practitioners can correctly implement the latest theoretical refinements in model specification in order to build the best models using large scale and traditional datasets making the book of interest to a broad readership of economists from theoretical econometricians to applied economic practitioners *Routledge Handbook of Smart Built Environment* Weisheng
