

Rationality and Intelligence

- “Productive research in AI, both practical and theoretical, benefits from a notion of intelligence that is precise enough to allow the cumulative development of robust systems and general results. The concept of *rational agency* has long been considered a leading candidate to fulfill this role”.

Rationality And Intelligence:

Rationality and Intelligence Jonathan Baron, 2005-07-07 Rationality and Intelligence develops and justifies a prescriptive theory of rational thinking in terms of utility theory and the theory of rational life plans The prescriptive theory buttressed by other assumptions suggests that people generally think too little and in a way that is insufficiently critical of the initial possibilities that occur to them

Ecological Rationality Peter M. Todd, Gerd Gigerenzer, 2012-04-10 More information is always better and full information is best More computation is always better and optimization is best More is better ideals such as these have long shaped our vision of rationality Yet humans and other animals typically rely on simple heuristics to solve adaptive problems focusing on one or a few important cues and ignoring the rest and shortcutting computation rather than striving for as much as possible In this book we argue that in an uncertain world more information and computation are not always better and we ask when and why less can be more The answers to these questions constitute the idea of ecological rationality how we are able to achieve intelligence in the world by using simple heuristics matched to the environments we face exploiting the structures inherent in our physical biological social and cultural surroundings

Rationality and the Reflective Mind Keith Stanovich, 2010-11-01 In Rationality and the Reflective Mind Keith Stanovich attempts to resolve the Great Rationality Debate in cognitive science the debate about how much irrationality to ascribe to human cognition He shows how the insights of dual process theory and evolutionary psychology can be combined to explain why humans are sometimes irrational even though they possess remarkably adaptive cognitive machinery Stanovich argues that to fully characterize differences in rational thinking we need to replace dual process theories with tripartite models of cognition Using a unique individual differences approach he shows that the traditional second system System 2 of dual process theory must be further divided into the reflective mind and the algorithmic mind Distinguishing them will allow us to better appreciate the significant differences in their key functions The key function of the reflective mind is to detect the need to interrupt autonomous processing and to begin simulation activities whereas that of the algorithmic mind is to sustain the processing of decoupled secondary representations in cognitive simulation Stanovich then uses this algorithmic reflective distinction to develop a taxonomy of cognitive errors made on tasks in the heuristics and biases literature He presents the empirical data to show that the tendency to make these thinking errors is not highly related to intelligence Using his tripartite model of cognition Stanovich shows how when both are properly defined rationality is a more encompassing construct than intelligence and that IQ tests fail to assess individual differences in rational thought He then goes on to discuss the types of thinking processes that would be measured if rational thinking were to be assessed as IQ has been

The Rationality Quotient Keith E. Stanovich, Richard F. West, Maggie E. Toplak, 2018-02-09 How to assess critical aspects of cognitive functioning that are not measured by IQ tests rational thinking skills Why are we surprised when smart people act foolishly Smart people do foolish things all the time Misjudgments and bad decisions by highly educated bankers and

money managers for example brought us the financial crisis of 2008 Smart people do foolish things because intelligence is not the same as the capacity for rational thinking The Rationality Quotient explains that these two traits often and incorrectly thought of as one refer to different cognitive functions The standard IQ test the authors argue doesn't measure any of the broad components of rationality adaptive responding good judgment and good decision making The authors show that rational thinking like intelligence is a measurable cognitive competence Drawing on theoretical work and empirical research from the last two decades they present the first prototype for an assessment of rational thinking analogous to the IQ test the CART Comprehensive Assessment of Rational Thinking The authors describe the theoretical underpinnings of the CART distinguishing the algorithmic mind from the reflective mind They discuss the logic of the tasks used to measure cognitive biases and they develop a unique typology of thinking errors The Rationality Quotient explains the components of rational thought assessed by the CART including probabilistic and scientific reasoning the avoidance of miserly information processing and the knowledge structures needed for rational thinking Finally the authors discuss studies of the CART and the social and practical implications of such a test An appendix offers sample items from the test

On Rationality, Artificial Intelligence And Economics Daniel Muller, Fernando Buarque, Tshilidzi Marwala, 2022-03-09 The world we live in presents plenty of tricky impactful and hard to make decisions to be taken Sometimes the available options are ample at other times they are apparently binary either way they often confront us with dilemmas paradoxes and even denial of values In the dawn of the age of intelligence when robots are gradually taking over most decision making from humans this book sheds a bit of light on decision rationale It delves into the limits of these decision processes for both humans and machines and it does so by providing a new perspective that is somehow opposed to orthodox economics All Economics reflections in this book are underlined and linked to Artificial Intelligence The authors hope that this comprehensive and modern analysis firmly grounded in the opinions of various groundbreaking Nobel laureate economists may be helpful to a broad audience interested in how decisions may lead us all to flourishing societies That is societies in which economic blunders caused by over simplification of problems and super estimation of tools are reduced substantially

Rationality and the Reflective Mind Keith Stanovich, 2011-02-03 In this book Keith Stanovich attempts to resolve the Great Rationality Debate in cognitive science the debate about how much irrationality to ascribe to human cognition Stanovich shows how the insights of dual process theory and evolutionary psychology can be combined to explain why humans are sometimes irrational even though they possess cognitive machinery of remarkable adaptiveness Using a unique individual differences approach Stanovich shows that to fully characterize differences in rational thinking the traditional System 2 of dual process theory must be partitioned into the reflective mind and the algorithmic mind Using a new tripartite model of mind Stanovich shows how rationality is a more encompassing construct than intelligence when both are properly defined and that IQ tests fail to assess individual differences in rational thought Stanovich discusses the types of thinking processes that would be measured in an
