Real Time Computing Alexander D. Stoyenko, 2013-12-14 NATO's Division of Scientific and Environmental Affairs sponsored this Advanced Study Institute because it was felt to be timely to cover this important and challenging subject for the first time in the framework of NATO's ASI programme The significance of real time systems in everyone's life is rapidly growing The vast spectrum of these systems can be characterised by just a few examples of increasing complexity controllers in washing machines air traffic control systems control and safety systems of nuclear power plants and finally future military systems like the Strategic Defense Initiative SDI The importance of such systems for the well being of people requires considerable efforts in research and development of highly reliable real time systems Furthermore the competitiveness and prosperity of entire nations now depend on the early application and efficient utilisation of computer integrated manufacturing systems CIM of which real time systems are an essential and decisive part Owing to its key significance in computerised defence systems real time computing has also a special importance for the Alliance The early research and development activities in this field in the 1960s and 1970s aimed towards improving the then unsatisfactory software situation Thus the first high level real time languages were defined and developed RTL 2 Coral 66 Procol LTR and PEARL In close connection with these language developments and with the utilisation of special purpose process control peripherals the research on real time operating systems advanced considerably

VHDL for Simulation, Synthesis and Formal Proofs of Hardware Jean Mermet, 2012-12-06 The success of VHDL since it has been balloted in 1987 as an IEEE standard may look incomprehensible to the large population of hardware designers who had never heard of Hardware Description Languages before for at least 90% of them as well as to the few hundreds of specialists who had been working on these languages for a long time 25 years for some of them Until 1988 only a very small subset of designers in a few large companies were used to describe their designs using a proprietary HDL or sometimes a HDL inherited from a University when some software environment happened to be developed around it allowing usability by third parties A number of benefits were definitely recognized to this practice such as functional verification of a specification through simulation first performance evaluation of a tentative design and sometimes automatic microprogram generation or even automatic high level synthesis As there was apparently no market for HDL s the ECAD vendors did not care about them start up companies were seldom able to survive in this area and large users of proprietary tools were spending more and more people and money just to maintain their internal system
