Real-time Systems Scheduling 2 Maryline Chetto, 2014-09-10 Real time systems are used in a wide range of applications including control sensing multimedia etc Scheduling is a central problem for these computing communication systems since it is responsible for software execution in a timely manner This book the second of two volumes on the subject brings together knowledge on specific topics and discusses the recent advances for some of them It addresses foundations as well as the latest advances and findings in real time scheduling giving comprehensive references to important papers but the chapters are short and not overloaded with confusing details Coverage includes scheduling approaches for networks and for energy autonomous systems Other sophisticated issues such as feedback control scheduling and probabilistic scheduling are also addressed This book can serve as a textbook for courses on the topic in bachelor s degrees and in more advanced master s degree programs It also provides a reference for computer scientists and engineers involved in the design or the development of Cyber Physical Systems which require up to date real time scheduling solutions
