Advances in Disease Vector Research, 2012-12-06
Volume 9 in this series consists of four chapters on vectors that affect human or animal health and six chapters on plant pathogens and their vectors In Chapter 1 Alex S Raikhel discusses vitellogenesis in mosquitoes the cornerstone of the reproductive cycle involving massive production of yolk precursors by the fat body and their accumulation in developing oocytes In anautogenous mosquitoes vitellogenesis is dependent on the availability of a blood meal and as a consequence is linked to transmission of pathogens Therefore elucidation of mechanisms governing the mosquito vitellogenesis is critical for

the successful development of novel strategies in vector and disease management Previous reviews on mosquito vitellogenesis have dealt predominantly with hormonal control The goal of this review however is to summarize significant progress which has been achieved in understanding mosquito vitellogenesis at the cellular biochemical and molecular levels It is with these disciplines that we expect to fully understand the mechanisms governing this key process in mosquito reproduction

The Handbook of Mites of Economic Plants Vincenzo Vacante, 2015-12-21 Mites pose a serious problem to plants worldwide attacking crops and spreading disease When mites damage crops of economic importance the impacts can be felt globally Mites are among the most diverse and successful of invertebrates with over 45 000 described species with many more thousands to be discovered They are responsible for a significant portion of the losses of crops for food fibre industry and other purposes and require expensive and often controversial pest control measures Understanding these mites is vital for entomologists pest researchers agronomists and food producers Knowledge of mite pests helps to inform control strategies and optimize the production of economic plants and the agrarian economy This encyclopedia provides a thorough coverage of the mites and the problems they cause to crops yet it is easily searchable organised by mite species and subdivided into helpful headings It takes a worldwide view of the issue of mites injurious to economic plants describing mites prevalent in different regions and discussing control methods appropriate in different environments This book provides an encyclopaedic reference to the major mites described by family in terms of their internal and external morphology bio ecology and family systematics Methods of mite collection and laboratory study is described as well as species diagnostic characteristics worldwide distribution host plants identification by the type of damage they cause and control strategies including chemical and biological intervention and integrated pest management measures Mites of the following families are included Eriophyoidea Tarsonemidae Tuckerellidae Tenuipalpidae Tetranychidae Acaridae Penthaleidae Mites of Economic Plants is an important resource for students of entomology and crop production and as a thorough reference guide for researchers and field workers involved with mites crop damage and food production

National Tick Surveillance Program, 1981 *The Handbook of Mites of Stored Products* Vincenzo Vacante, Carlos Holger Wenzel Flechtmann, 2024-12-23 Storage mites are common pests of stored food and other processed agricultural products and an infestation can occur at any point throughout the supply chain Their presence is associated with serious hygienic implications and economic loss and can be harmful to the health of humans and animals This book provides a comprehensive and up to date study of mites associated with these products covering core concerns including the mites of cheese ham and sausages mushrooms and vegetable fibres Written by an experienced author within the field this is an important resource for researchers laboratory scientists and students involved in acarology agricultural entomology pest management and food preservation science and safety

Soil Biology Guide Daniel L. Dindal, 1991-01-16 A comprehensive study of the biology taxonomy and ecology of each of the soil biotic groups The first chapter presents an ecological approach to soil studies The

remaining 42 chapters provide specific information on each of the taxonomic groupings. Contains illustrated identification keys to each group. Some keys go by functional morphological delineations, others lead the reader to classical identification at family, genus or species levels. Some incorporate descriptions of new genera and species. Especially useful for the study of mesic, xeric and hydric terrestrial sites. Includes an extensive bibliography. *Sperm Competition and the Evolution of Animal Mating Systems* Robert L. Smith, 2012-12-02. *Sperm Competition and the Evolution of Animal Mating Systems* describes the role of sperm competition in selection on a range of attributes from gamete morphology to species mating systems. This book is organized into 19 chapters and begins with the conceptualization of sperm competition as a subset of sexual selection and its implications for the insects. The following chapter describes the relationship between multiple mating and female fitness with an emphasis on determining the conditions under which selection on females is likely to counteract selection on males for avoiding sperm competition. Other chapters consider the female perspective on sperm competition, the evolutionary causation at the level of the individual male gamete and the correlation of high paternal investment and sperm precedence in the insects. The remaining chapters are arranged phylogenetically and explore sperm competition in diverse animal taxa such as the *Drosophila*, Lepidoptera, spiders, amphibians and reptiles. These chapters also cover the evolution of direct versus indirect sperm transfer among the arachnids or the problem for kinship theory presented by multiple mating and sperm competition in the Hymenoptera. This book further discusses the remarkable potential for sperm competition among certain temperate bat species whose females store sperm through winter hibernation and the mixed strategies and male caused female genital trauma as possible sperm competition adaptations in poeciliid fishes. The concluding chapter examines the predictions concerning testes size and mating systems in the primates and the possible role of sperm competition in human selection. This book is of great value to reproductive biologists and researchers.

Management of Insect Pests in Vegetable Crops Ramanuj Vishwakarma, Ranjeet Kumar, 2020-04-13. This new book on the sustainable management of insect pests in important vegetables offers valuable management strategies in detail. It focuses on eco friendly technology and approaches to mitigating the damage caused by insect pests with special reference to newer insecticides. Chapters in the volume provide an introduction to vegetable entomology and go on to present a plethora of research on sustainable eco friendly pest management strategies for root vegetables, spice crops, tuber crops and more. Vegetable crops that are infested by several insect pests from the nursery to the harvesting stage cause enormous crop losses. Given that it is estimated that up to 40 percent of global crops are lost to agricultural pests each year, new research on effective management strategies is vital. The valuable information provided in this book will be very helpful for faculty and advanced level students, scientists and researchers, policymakers and others involved in pest management for vegetable crops.
