Halonen,Louis M. Weiss,2013-07-03 Toxoplasma gondii an Apicomplexan is a pathogenic protozoan that can infect the central nervous system Infection during pregnancy can result in a congenital infection with severe neurological sequelae In immunocompromised individuals reactivation of latent neurological foci can result in encephalitis

Immunocompetent individuals infected with *T. gondii* are typically asymptomatic and maintain this infection for life. However, recent studies suggest that these asymptomatic infections may have effects on behavior and other physiological processes. *Toxoplasma gondii* infects approximately one third of the world population, making it one of the most successful parasitic organisms. Cats and other felidae serve as the definite host, producing oocysts, an environmentally resistant life cycle stage found in cat feces, which can transmit the infection when ingested orally. A wide variety of warm-blooded animals, including humans, can serve as the intermediate host, in which tissue cysts containing bradyzoites develop. Transmission also occurs due to ingestion of the tissue cysts. There are three predominant clonal lineages termed Types I, II, and III, and an association with higher pathogenicity with the Type I strains in humans has emerged. This chapter presents a review of the biology of this infection, including the life cycle, transmission, epidemiology, parasite strains, and the host immune response. The major clinical outcomes of congenital infection, chorioretinitis and encephalitis, and the possible association of infection with toxoplasmosis and neuropsychiatric disorders such as schizophrenia are reviewed.

Neurological Practice: An Indian Perspective - E-Book Noshir H. Wadia, Satish V. Khadilkar, 2014-10-30
Headache, Tumours of Central Nervous System.

Advances in Neurology J. S. Chopra, K. Jagannathan, I. M. S. Sawhney, 1990
This volume is based on the proceedings of four full-day Main Theme Symposia held during the XIV World Congress on Neurology, 22-27 October 1989, in New Delhi, India. The contributions submitted by internationally renowned scientists review the current state of the art on specific compelling problems encountered daily in neurology. The book is divided into five sections, each of which assumes a different topic as its focal point. The first section deals with Cerebrovascular Disease (CVD) and is devoted to both acute and chronic CVD. CVD was the main theme eight years ago during the XII World Congress of Neurology in Kyoto, and since then many new developments have taken place relating to the diagnosis and management thereof. Among topics discussed are epidemiology, mechanism of cerebral ischaemia, and medical management of acute stroke and areas pertaining to stroke in young, including acute cerebral venous occlusions and arterial strokes. AIDS, the twentieth-century plague, is spreading uninhibited throughout the world and continues to attract the attention of neuroscientists because of its numerous neurological complications.
