## **Reception Of Unconventional Science By The Scientific Community:**

**The Reception Of Unconventional Science** Seymore H Mauskopf, 2019-06-26 The issue of perhaps greatest concern to historians of science today is the internalist externalist dichotomy This volume directly addresses that issue at the same time providing a context for the serious study of heterodox science and scientific theories The book consists of four studies each of which considers the response of a scientific community to an unconventional theory or claim the acausal physics of Heisenberg Wegener s geological theory of continental drift acupuncture and the statistical argument for extrasensory perception As they reveal a wide range of reactions to orthodoxy the studies themselves exemplify the range of approaches the historian may use in examining scientific unconventionality

**The Politics and Morality of Deviance** Nachman Ben-Yehuda, 1990-01-01 The Politics and Morality of Deviance develops a theoretical framework and then applies it to four different and specific case studies in an explicit attempt to put the sociology of deviance back into mainstream sociology It argues that deviance should be analyzed as a relative phenomenon in different and changing cultures vis a vis change and stability in the boundaries of different symbolic moral universes It also argues that the legitimization of power should be thought of in terms of a moral order that in turn defines the societal boundaries of different symbolic moral universes Mills concept of motivational accounting systems is utilized throughout the text in order to illustrate how the micro and macro levels of analysis can be integrated

**Encyclopedia of Pseudoscience** William F. Williams, 2013-12-02 The Encyclopedia of Pseudoscience is the first one volume A to Z reference that identifies defines and explains all of the terms and ideas dealing with the somewhat murky world of the almost sciences Truly interdisciplinary and multicultural in scope the Encyclopedia examines how fringe or marginal sciences have affected people throughout history as well as how they continue to exert an influence on our lives today This comprehensive reference brings together superstitions and fads that are part of popular culture such as fortune telling healing practices once thought marginal that are now become increasingly accepted such as homeopathy and acupuncture frauds and hoaxes that have occurred throughout history such as UFOs mistaken theories first put forward as serious science but later discarded as false such as phrenology and racial typing etc More than 2000 extensively cross referenced and illustrated entries cover prominent phenomena major figures events topics places and associations

**Physics, Philosophy, and the Scientific Community** K. Gavroglu, John Stachel, Marx W. Wartofsky, 2013-06-29 In three volumes a distinguished group of scholars from a variety of disciplines in the natural and social sciences the humanities and the arts contribute essays in honor of Robert S Cohen on the occasion of his 70th birthday The range of the essays as well as their originality and their critical and historical depth pay tribute to the extraordinary scope of Professor Cohen s intellectual interests as a scientist philosopher and a humanist and also to his engagement in the world of social and political practice The essays presented in Physics Philosophy and the Scientific Community Volume I of Essays in Honor of Robert S Cohen focus on philosophical and historical issues in contemporary physics on the origins and conceptual

foundations of quantum mechanics on the reception and understanding of Bohr's and Einstein's work on the emergence of quantum electrodynamics and on some of the sharp philosophical and scientific issues that arise in current scientific practice e.g. in superconductivity research. In addition, several essays deal with critical issues within the philosophy of science, both historical and contemporary e.g. with Cartesian notions of mechanism in the philosophy of biology with the language and logic of science e.g. with new insights concerning the issue of a physicalistic language in the arguments of Neurath, Carnap and Wittgenstein with the notion of elementary logic and with rational and non-rational elements in the history of science. Two original contributions to the history of mathematics and some studies in the comparative sociology of science round off this outstanding collection.

*Reader's Guide to the History of Science* Arne Hessenbruch, 2013-12-16. **Dear Martin / Dear Marcello: Gardner And Truzzi On Skepticism** Dana Richards, 2017-04-27. In 1952, Martin Gardner wrote the book *Fads and Fallacies in the Name of Science*, which has become a modern classic of the skeptical movement. He is best known as the Father of Recreational Mathematics but was also a frank critic of pseudoscientists and a contributor to the *Skeptical Inquirer* magazine. Marcello Truzzi was one of the founders of the Committee for the Scientific Investigation of Claims of the Paranormal in 1976. He left that and founded the Center for Scientific Anomalies Research, which was more aligned with his views. Dana Richards presents the unedited, colorful correspondence between these two well-known figures within the skeptical movement as they probed and wrestled with fundamental questions such as

**The Price of Altruism** Oren Harman, 2011-06-20. Enthralling. Frans de Waal. New York Times Book Review. Survival of the fittest or survival of the nicest? Since the dawn of time, man has contemplated the mystery of altruism, but it was Darwin who posed the question most starkly: From the selfless ant to the stinging bee to the man laying down his life for a stranger, evolution has yielded a goodness that in theory should never be set against the sweeping tale of 150 years of scientific attempts to explain kindness. *The Price of Altruism* tells for the first time the moving story of the eccentric American genius George Price (1922-1975) as he strives to answer evolution's greatest riddle. An original and penetrating picture of twentieth-century thought, it is also a deeply personal journey. From the heights of the Manhattan Project to the inspired equation that explains altruism to the depths of homelessness and despair, Price's life embodies the paradoxes of Darwin's enigma. His tragic suicide in a squatter's flat among the vagabonds to whom he gave all his possessions provides the ultimate contemplation on the possibility of genuine benevolence.

**The Elusive Science**

Seymour H. Mauskopf, Michael Rogers McVaugh, 1980 Publisher description In the tradition of Margaret MacMillan's Paris 1919 comes a new consideration of Canada's most famous war and the Treaty of Ghent that unsatisfactorily concluded it from one of this country's premier military historians In the Canadian imagination the War of 1812 looms large It was a war in which British and Indian troops prevailed in almost all of the battles in which the Americans were unable to hold any of the land they fought for in which a young woman named Laura Secord raced over the Niagara peninsula to warn of American plans for attack though how she knew has never been discovered and in which Canadian troops burned down the White House Competing American claims insist to this day that in fact it was they who were triumphant But where does the truth lie Somewhere in the middle as is revealed in this major new reconsideration from one of Canada's master historians Drawing on never before seen archival material Zuehlke paints a vibrant picture of the war's major battles vividly re-creating life in the trenches the horrifying day to day manoeuvring on land and sea and the dramatic negotiations in the Flemish city of Ghent that brought the war to an unsatisfactory end for both sides By focusing on the fraught dispute in which British and American diplomats quarrelled as much amongst themselves as with their adversaries Zuehlke conjures the compromises and backroom deals that yielded conventions resonating in relations between the United States and Canada to this very day
