Receptor Molecular Biology Methods In Neurosciences:

Receptor Molecular Biology, 1995-03-22 The volumes in this series include contemporary techniques significant to a particular branch of neuroscience. They are an invaluable aid to the student as well as the experienced researcher not only in developing protocols in neuroscience but in disciplines where research is becoming closely related to neuroscience. Each volume of *Methods in Neurosciences* contains an index and each chapter includes references. Dr Conn became Editor in Chief of the series beginning with Volume 15 so each subsequent volume could be guest edited by an expert in that specific field. This further strengthens the depth of coverage in *Methods in Neurosciences* for students and researchers alike. Cloning, Expression systems, Signal transduction, Structure function techniques, Antireceptor antibodies, Regulation, 3 D receptor modeling and computational probing. *Methods in Neurosciences: Receptor molecular biology* P. Michael Conn, 1989

Methods in Neurosciences: Receptors: Molecular biology, receptor subclasses, localization, and ligand design P. Michael Conn, 1989 *Methods in Neurosciences* P. Michael Conn, 1989 *Neurobiology of Cytokines* Errol B. De Souza, 2013-10-22 *Neurobiology of Cytokines* Part A provides an overview of the effects of cytokines in the brain and in the endocrine system. The book discusses the general aspects of cytokines including the endogenous agonists and antagonists, their receptors, their second messengers and transport mechanisms for cytokines across the blood brain barrier. The text also describes the anatomical localization of cytokines, cytokine receptors and their respective mRNA in brain and in endocrine tissues. The methods for evaluating the in vivo as well as in vitro actions of cytokines on hormone secretion are also considered. The book further tackles the synthesis and release of cytokines and their central nervous system actions and the methodology for studying the role of cytokines in human neuropathological conditions. **Serotonin Receptors in Neurobiology** Amitabha Chattopadhyay, 2007-05-17 A number of developments spanning a multitude of techniques makes this an exciting time for research in serotonin receptors. A comprehensive review of the subject from a multidisciplinary perspective. *Serotonin Receptors in Neurobiology* is among the first books to include information on serotonin receptor knockout studies. With contributions from 1 *Receptors* P. Michael Conn, 1993 Receptors initiate the means by which cellular regulators exert their actions on targets. Because of the central role of cell cell communication and signal transduction, receptors are of intrinsic interest to neuroscientists. Receptor studies utilize both traditional methods of analysis and modern molecular techniques. Key Features: Methods presented for easy adaptation to new systems. Comprehensive protocols included for molecular techniques: PCR, cloning, transfection, coupling techniques for the determination of receptor subclasses, techniques for localization in situ, hybridization, immunocytochemistry, ligand design, radioactive techniques, biotinylated techniques, receptor associated kinase. Methodology described for the following receptors: acetylcholine, angiotensin II, bombesin, GRP, dopamine, GABA, G protein coupled receptors, neurotensin, NGF, NPY, serotonin, somatostatin, tachykinin. *G Proteins* Patrick C. Roche, 1996-03-27 *G Proteins* **The Neurobiological Basis of Suicide** Yogesh Dwivedi, 2012-06-25 With recent studies

using genetic epigenetic and other molecular and neurochemical approaches a new era has begun in understanding pathophysiology of suicide Emerging evidence suggests that neurobiological factors are not only critical in providing potential risk factors but also provide a promising approach to develop more effective treatment and prevention strategies The Neurobiological Basis of Suicide discusses the most recent findings in suicide neurobiology Psychological psychosocial and cultural factors are important in determining the risk factors for suicide however they offer weak prediction and can be of little clinical use Interestingly cognitive characteristics are different among depressed suicidal and depressed nonsuicidal subjects and could be involved in the development of suicidal behavior The characterization of the neurobiological basis of suicide is in delineating the risk factors associated with suicide The Neurobiological Basis of Suicide focuses on how and why these neurobiological factors are crucial in the pathogenic mechanisms of suicidal behavior and how these findings can be transformed into potential therapeutic applications **Encyclopedia of Neuroscience, Volume 1** Larry R.

Squire, 2009-06-12 The Encyclopedia of the Neuroscience explores all areas of the discipline in its focused entries on a wide variety of topics in neurology neurosurgery psychiatry and other related areas of neuroscience Each article is written by an expert in that specific domain and peer reviewed by the advisory board before acceptance into the encyclopedia Each article contains a glossary introduction a reference section and cross references to other related encyclopedia articles Written at a level suitable for university undergraduates the breadth and depth of coverage will appeal beyond undergraduates to professionals and academics in related fields
