Receptors Models For Binding Trafficking And Signaling:

Receptors: Models for Binding, Trafficking, and Signaling Douglas A. Lauffenburger, Jennifer J.

Linderman, 1996-05-02 This book offers a bridge at the interface between engineering and cell biology demonstrating how a mathematical modelling approach combined with quantitative experiments can provide enhanced understanding of cell phenomena involving receptor ligand interactions Model frameworks are described over the entire spectrum of receptor processes from fundamental cell surface binding intracellular trafficking and signal transduction events to the cell behavioural functions they govern including proliferation adhesion and migration **Receptors** Douglas A.

Lauffenburger, Jennifer J. Linderman, 2023 This is an analysis of receptor mediated cell phenomena and their relationship to cell function emphasizing mathematical models and quantitative experiments It seeks to explain biomedical engineering approaches to cell biologists and conversely to introduce biological problems to engineers Receptor - Based Drug Design

Paul Leff, 1998-04-10 Employing a wide range of examples from G protein coupled receptors and ligand gated ion channels this detailed single source reference illustrates the principles of pharmacological analysis and receptor classification that are the basis of rational drug design Explains the experimental and theoretical methods used to characterize interactions between ligands and receptors providing the pharmacological information needed to solve treatment problems and facilitate the drug design process Demonstrating the achievements of the receptor based approach in therapeutics and indicating future directions Receptor Based Drug Design introduces novel computer assisted strategies for the design of new agonists antagonists and inverse agonists for G protein coupled receptors shows how to assess agonist concentration effect curve data discusses radioligand binding assays presents new in vitro multiarray assays for G protein coupled receptors explains the use of individual second messenger signaling responses in analyzing drug receptor interactions examines the role of electrophysiology in finding new drugs and drug targets describes selectively acting b adrenoceptor agonists and glucocorticoid steroids for asthma treatment outlines the rationale for using angiotensin receptor antagonists and more Written by over 25 international authorities and containing nearly 1200 bibliographic citations Receptor Based Drug Design is a practical resource for pharmacologists pharmacists and pharmaceutical scientists organic and medicinal chemists and biochemists molecular biologists biomedical researchers and upper level undergraduate and graduate students in these disciplines

Computer Modeling in Bioengineering Miloš Kojić, Nenad Filipović, Boban Stojanović, Nikola Kojić, 2008-09-15 Bioengineering is a broad based engineering discipline that applies engineering principles and design to challenges in human health and medicine dealing with bio molecular and molecular processes product design sustainability and analysis of biological systems Applications that benefit from bioengineering include medical devices diagnostic equipment and biocompatible materials amongst others Computer Modeling in Bioengineering offers a comprehensive reference for a large number of bioengineering topics presenting important computer modeling problems and solutions for research and medical

practice Starting with basic theory and fundamentals the book progresses to more advanced methods and applications allowing the reader to become familiar with different topics to the desired extent It includes unique and original topics alongside classical computational modeling methods and each application is structured to explain the physiological background phenomena that are to be modeled the computational methods used in the model and solutions of typical cases The accompanying software contains over 80 examples enabling the reader to study a topic using the theory and examples then run the software to solve the same or similar examples varying the model parameters within a given range in order to investigate the problem at greater depth Tutorials also guide the user in further exploring the modeled problem these features promote easier learning and will help lecturers with presentations Computer Modeling in Bioengineering includes computational methods for modelling bones tissues muscles cardiovascular components cartilage cells and cancer nanotechnology as well as many other applications It bridges the gap between engineering biology and medicine and will appeal not only to bioengineering students lecturers and researchers but also medical students and clinical researchers

Models of Calcium Signalling Geneviève Dupont, Martin Falcke, Vivien Kirk, James Sneyd, 2016-06-07 This book discusses the ways in which mathematical computational and modelling methods can be used to help understand the dynamics of intracellular calcium The concentration of free intracellular calcium is vital for controlling a wide range of cellular processes and is thus of great physiological importance However because of the complex ways in which the calcium concentration varies it is also of great mathematical interest This book presents the general modelling theory as well as a large number of specific case examples to show how mathematical modelling can interact with experimental approaches in an interdisciplinary and multifaceted approach to the study of an important physiological control mechanism Geneviève Dupont is FNRS Research Director at the Unit of Theoretical Chronobiology of the Université Libre de Bruxelles Martin Falcke is head of the Mathematical Cell Physiology group at the Max Delbrück Center for Molecular Medicine Berlin Vivien Kirk is an Associate Professor in the Department of Mathematics at the University of Auckland New Zealand James Sneyd is a Professor in the Department of Mathematics at The University of Auckland New Zealand Function and Regulation of Cellular Systems Andreas Deutsch, Jonathan Howard, Martin Falcke, Walter Zimmermann, 2012-12-06 Current biological research demands the extensive use of sophisticated mathematical methods and computer aided analysis of experiments and data This highly interdisciplinary volume focuses on structural dynamical and functional aspects of cellular systems and presents corresponding experiments and mathematical models The book may serve as an introduction for biologists mathematicians and physicists to key questions in cellular systems which can be studied with mathematical models Recent model approaches are presented with applications in cellular metabolism intra and intercellular signaling cellular mechanics network dynamics and pattern formation In addition applied issues such as tumor cell growth dynamics of the immune system and biotechnology are included Biomedical Engineering Handbook 2 Joseph D.
