Reefs Evaporites Concepts Deposition:

Reefs and Evaporites--concepts and Depositional Models James Harold Fisher, American Association of Petroleum Geologists, 1977 Deposition, Diagenesis and Practical Applications of Limestones, Dolostones and Associated Deposits Colin J.R. Braithwaite, 2024-09-24 This literary Swiss army knife on limestones provides descriptions and illustrations to explain the origins and uses of these important deposits The book discusses their compositions and largely organically driven origins as well as the environments in which they form including both marine and land based systems Microscopic examination reveals the secrets of their subsequent development to form rocks A brief explanation considers new views on their unique stratigraphy Limestones are the fundamental ingredient for cement manufacturing and provide both building stones and aggregates Landscapes that include limestones form iconic and locally protected karst scenery with the distinction of generating some of the most intractable hydrogeological and foundation problems illustrated by case studies They provide reservoirs for 50% of the world's oil and gas reserves and locally host mineral ores examples include lead zinc barite fluorite and copper The closing chapter discusses the conservation of geological and geomorphological assets in Sites of Special Scientific Interest with some lithologies designated as Heritage Stones *Evaporites Through Space and Time* B. Charlotte Schreiber, S. Lugli, M. Babel, 2007 This book is an exploration of varying approaches to the study of the deposition diagenesis and stratigraphy of evaporites The volume includes papers from chemical modellers who work on the basis of geochemical representations of the formative water bodies and from basin wide depositional stratigraphical modellers who propose depositional scenarios that are fitted to individual basinal pictures Until now there have been only a few studies of evaporite formation that explain the characteristic features we observe in the real rock record This volume is a collection of relevant papers in which these features are integrated in a realistic manner based on our new understanding of saline water bodies to the diverse tectonic chemical and depositional constraints of their individual basins In addition there are several review articles that offer oversight and extensive referencing of basins worthy of further study This book is a valuable resource for sedimentologists and stratigraphers looking for an up to date reference on evaporite deposits *Hypersaline Brines and Evaporitic Environments*, 2011-09-22 *Hypersaline Brines and Evaporitic Environments* **Early sedimentary evolution of the Michigan Basin** Paul A. Catacosinos, Paul A. Daniels, 1991 Carbonate Petroleum Reservoirs P.O. Roehl, P.W. Choquette, 2012-12-06 The case history approach has an impressive record of success in a variety of disciplines Collections of case histories casebooks are now widely used in all sorts of specialties other than in their familiar application to law and medicine The case method had its formal beginning at Harvard in 1871 when Christopher Lagdell developed it as a means of teaching It was so successful in teaching law that it was soon adopted in medical education and the collection of cases provided the raw material for research on various diseases Subsequently the case history approach spread to such varied fields as business psychology management and economics and there are over 100 books in print that use this

approach The idea for a series of Casebooks in Earth Sciences grew from my experience in organizing and editing a collection of examples of one variety of sedimentary deposits The project began as an effort to bring some order to a large number of descriptions of these deposits that were so varied in presentation and terminology that even specialists found them difficult to compare and analyze Thus from the beginning it was evident that something more than a simple collection of papers was needed Accordingly the nearly fifty contributors worked together with George de Vries Klein and me to establish a standard format for presenting the case histories *Palaeoclimatology and Palaeoceanography from Laminated Sediments* Alan E. S. Kemp, 1996 The magnitude and causes of decadal to century scale changes in climate are major issues of global concern The separation of anthropogenically driven change from natural baseline variability within the atmosphere ocean system is a prerequisite to identifying human impact on global climate An understanding of past climate variability is therefore a key to predicting future climate change The sedimentary record of the oceans seas and lakes is produced by a series of depositional events that occur on seasonal timescales but can rarely be resolved due to mixing of the sediment by bottomdwelling organisms Where they are preserved laminated sediments act like tree rings to record these seasonal scale processes such as plankton blooms and floods and provide a uniquely high resolution record of environmental change In addition annually laminated or varved sediment sequences act as geochronometers against which other timescales can be tested Laminated sediments may therefore be used to develop records of interannual and decadal scale variability which serve to test models of climate change The authors cover a range of topics that include strategies for study and techniques of analysis A series of case studies dealing with a variety of lacustrine and marine records illustrates the wide potential of laminated sediments as palaeoclimatic and palaeoceanographic indicators **Sedimentary Environments** Harold G. Reading, 2009-07-15 Sedimentary Environments is one of the most distinguished and influential textbooks in the earth sciences published in the last 20 years The first and second editions both won universal praise and became classic works in sedimentology Since the publication of the last edition the study of sedimentary environments and facies has made great strides with major advances in facies modelling sequence stratigraphy and basin modelling The 3rd edition of this classic text will likely set the benchmark even higher and needless to say will continue being the textbook of choice for sedimentology students The latest edition of a classic text Incorporates all the latest advances in dynamic stratigraphy Will remain the textbook of choice for upper level undergraduate and graduate students in sedimentology *Quaternary Carbonate and Evaporite Sedimentary Facies and Their Ancient Analogues* Christopher G. St. C. Kendall, Abdulrahman S. Alsharhan, 2011-02-18 This book is part of the International Association of Sedimentologists IAS Special Publications The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists Papers are reviewed and printed to the same high standards as those published in the journal Sedimentology and several of these volumes have become standard works of reference This volume commemorates the

eclectic research of Douglas James Shearman into evaporites which was initiated by his studies of the prograding UAE coastal sabkhas or salt flats that incorporate evaporite minerals which displace and replace earlier carbonate sediments His subsequent proselytization of the study of ancient evaporites in sedimentary sections all over the world led to fundamental advances in our understanding of arid zone carbonate sedimentology The papers presented here are based on presentations made in Abu Dhabi UAE 12-14th October 2004 and 7th-8th November 2006 They provide a retrospective from the 1960s and 70s of Holocene evaporites and carbonates recapturing Shearman's contribution by revisiting the Holocene coastal evaporite and carbonate sediments of the Arabian Persian Gulf from Abu Dhabi Qatar and Oman The first set of papers considers these sediments from the perspective of their coastal geomorphology sedimentary character and their geochemistry Later papers examine the significance of these settings in the ancient geological section world wide including examples from the Mesozoic Cenozoic of the Moroccan Atlantic margin and the Upper Jurassic Arab Formation of the Arabian Gulf

Sedimentology and Stratigraphy Gary Nichols, 2013-04-30 This fully revised and updated edition introduces the reader to sedimentology and stratigraphic principles and provides tools for the interpretation of sediments and sedimentary rocks The processes of formation transport and deposition of sediment are considered and then applied to develop conceptual models for the full range of sedimentary environments from deserts to deep seas and reefs to rivers Different approaches to using stratigraphic principles to date and correlate strata are also considered in order to provide a comprehensive introduction to all aspects of sedimentology and stratigraphy The text and figures are designed to be accessible to anyone completely new to the subject and all of the illustrative material is provided in an accompanying CD ROM High resolution versions of these images can also be downloaded from the companion website for this book at www.wiley.com/go/nicholssedimentology
