Reforming Science Education Social Perspectives And Personal Reflections:

Reforming Science Education Rodger W. Bybee, 1993 *Researching and Teaching Social Issues* Samuel Totten, Jon Pedersen, 2012-05-01 originally published by Lexington Books A division of Rowman Littlefield Researching and Teaching Social Issues The Personal Stories and Pedagogical Efforts of Professors of Education is comprised of original personal essays in which notable teacher educators delineate the genesis and evolution of their thought and work vis a vis the teaching of social issues In relating their personal stories the authors were asked to discuss among other issues those individuals and or scholarly works that have most influenced them and how their own aspirations in the field the frustrations they have faced their perceptions of the field their major contributions and their current endeavors Our goal was that each and every story be as informative instructive and engaging as possible We believe that readers will be thoroughly engaged as they read the stories of these individuals stories that are inspiring filled with passion and reflective in nature We also believe that readers will gain unique pedagogical insights into the field and ample food for thought The individuals selected for inclusion in the book dedicated a great amount of time thought energy and commitment to creating powerful and pedagogically sound ways to teach about social and or controversial issues Many have done so for well over forty years and have been among the strongest advocates vis vis the place social issues have in the extant curriculum and beyond **Going Back for Our Future** Jon Pedersen, Kevin D. Finson, Barbara S. Spector, Paul Jablon, 2013-04-01 This book is the first volume of an attempt to capture and record some of the answers to these questions either from the pioneers themselves or from those persons who worked most closely with them We know there are many pioneers and early trailblazers who are not included in this volume but there are other volumes to follow As we have posed questions rummaged through files and oft neglected books and probed the memories of many individuals we have come to realize our list of true pioneers is ever growing There are names on the list that most of us readily recognize and there are names of whom few of us have heard yet who were significant in their roles as mentors or idea development and teaching We quickly discovered that the family tree showing connections between these people is not a neat clean simple branching tree but is more like spaghetti The connections are many are intertwined and all have their significance The stories in this volume demonstrate how vital this network was in supporting the individual pioneers during their journey in difficult times and continues to be for those of us today in our own enterprise **Inside Science Education Reform** J. Myron Atkin, Paul Black, 2003-01-01 Two international leaders offer important insights into the ways in which the discipline of science education has developed and how school curriculum has been shaped by both scientific discovery and social change J Myron Atkin U S and Paul Black U K share their vast and varied experiences in this historical account that chronicles the many developments in the field from the end of World War II to the present The chapters in this volume cover the aims and politics of science education curriculum development subject matter boundaries pedagogy and learning assessment and evaluation educational research and practice

and the teaching profession Each theme is introduced in its historical and philosophical context with current issues emphasized The authors then analyze these themes by drawing on relevant episodes from their transatlantic careers These episodes act as a springboard for developing insights into each theme including comparisons between educational practices in the United States and the United Kingdom Featuring compelling examples and a cohesive presentation this groundbreaking volume is essential reading for anyone making decisions about the future of science education *The Reality of Change*, 2000

Kirby, Thoron, Andrew C., 2024-05-06 Struggling to navigate the complex landscape of agricultural teacher education scholars face a daunting challenge the need for a comprehensive research synthesis tailored to their specific needs While valuable existing resources often need to provide the focused guidance required to address this discipline's myriad issues This gap leaves scholars needing a clear roadmap for advancing agricultural teacher education hindering progress and innovation in the field Emerging Research in Agricultural Teacher Education revolutionizes the field of education through agricultural research Offering a comprehensive synthesis of current research and proposing crucial areas for future investigation this book serves as the definitive solution to the challenges plaguing scholars in the field Consolidating decades of research and expertise into a single accessible volume it provides scholars with the tools they need to navigate the complexities of agricultural teacher education with confidence and clarity

Global Science Literacy V. J. Mayer, 2014-02-22 The authors propose the science curriculum concept of Global Science Literacy justifying its use internationally with reference to the nature of science the probable direction of science in the new millennium the capability for GSL to develop inter cultural understanding and its relevance to non Western cultures and traditions GSL curricula are organized conceptually rather than by science discipline include objectives from the social studies construct of global education and represent the broad spectrum of science methodologies not just those of the physical sciences typical of current curricula The book is recommended reading for all who are interested in the future of science curricula and interested in considering a non traditional viewpoint Curriculum developers and researchers future teachers and graduate students in general curriculum courses science education courses and social studies education courses and their professors should be particularly interested The book is divided into three sections In the first section the concept of Global Science Literacy and the justification of its use for science curricula internationally are developed The second section describes learning environments that are especially appropriate for GSL curricula The third and last section provides ideas and approaches for developing aspects of GSL curricula

Making it comparable David Waddington, Peter Nentwig, Sascha Schanze, 2007 One of the most significant developments in school education in recent years has been the development and introduction of standards a subject of considerable controversy This book is the result of a symposium held in Kiel a symposium that was arranged by two leading science education groups one at IPN Leibniz Institute for Science Education at the University of Kiel in Germany and the other at the University of York UK

The seminar brought together experts from 15 countries. These countries include those that have extensive experience with the effects of standards on the educational system on individual schools and teachers and on students. Other reports concern countries which are introducing them shortly and yet others on countries that are in the early stages of development of standards. 11 are from Europe and the others are from Australia, Israel, Taiwan, and the U.S. The book is divided into three parts. In Part A, two of the organizers set the scene describing the reasons for arranging the symposium and outlining the preparations and the work done at the meeting. Part B contains 17 reports from the 15 countries and in Part C there are two summaries analysing the conclusions taken from two different vantage points. The controversies surrounding standards remain. However, this book gives a succinct and authoritative overall account of the advantages and disadvantages of their introduction taken from the experiences of many countries.

Curriculum, Schooling and Applied Research Jennifer Donovan, Karen Trimmer, Nicholas Flegg, 2020-10-15. This book explores how teachers can navigate the complex process of managing change within the classroom. The chapters highlight the new challenges that have arisen with the emergence and introduction of educational technology as teachers find themselves having to be responsive to the needs and demands of multiple stakeholders. Traversing a range of conceptual disciplinary and methodological boundaries, the editors and contributors investigate the tensions that impinge on research-based change and how to integrate directed changes into their education system and classroom. Subsequently, this volume argues that posing these questions leads to increased understanding of the possible long-term effects of educational change and how teachers can know whether their solutions are effective.

Improving Instruction in Geometry and Measurement Margaret Schwan Smith, Edward A. Silver, Mary Kay Stein, 2005-01-01. Helping students develop an understanding of important mathematical ideas is a persistent challenge for teachers. In this book, one of a three-volume set, well-known mathematics educators Margaret Smith, Edward A. Silver, and Mary Kay Stein provide teachers of mathematics the support they need to improve their instruction. They focus on ways to engage upper elementary, middle school, and high school students in thinking, reasoning, and problem solving to build their mathematics understanding and proficiency. The content focus of Volume One is rational numbers and proportionality. Using materials that were developed under the NSF-funded COMET Cases of Mathematics to Enhance Teaching program, each volume in the set features cases from urban middle school classrooms with ethnically, racially, and linguistically diverse student populations. Each case illustrates an instructional episode in the classroom of a teacher who is implementing standards-based instruction, the teacher's perspective including their thoughts and actions as they interact with students and with key aspects of mathematical content, cognitively challenging mathematics activities that are built around samples of authentic classroom practice, and facilitation chapters to help professional developers teach the cases, including specific guidelines for facilitating discussions and suggestions for connecting the ideas presented in the cases to a teacher's own practice. As a complete set, this resource provides a basis on which to build a comprehensive professional development.
