Rehabilitation Of Cognitive Disabilities:

The Rehabilitation of Cognitive Disabilities Charles J. Long, J.M. Williams, 2012-12-06 The rehabilitation of intellectual impairment resulting from brain injury has become a major professional activity of clinical neuropsychologists. In recent years neuropsychology has developed from a professional role stressing assessment and diagnosis to one that now includes treatment and rehabilitation activities. Such trends are also manifested in two new research interests of neuropsychologists: the study of the generalizability of neuropsychological test findings to everyday abilities often referred to as the ecological validity of tests and outcome studies of cognitive retraining treatments. Discovering the relationships between traditional neuropsychological tests and everyday behavior is important because the referral questions posed to neuropsychologists have changed. Now the neuropsychologist is asked to comment on the patient's functional intellectual abilities as they relate to the everyday demands of home work and educational settings. Of course the development of cognitive retraining theory and procedures allows neuropsychologists to intervene in the treatment of the cognitive problems that the neuropsychological evaluation has documented. Since these approaches are still in their formative stages they have been the subject of clinical lore, great controversy and little systematic research. This situation prompted one of our presenters to lament: Either you believe Cognitive Retraining is divinely inspired or the work of the devil. There is apparently little middle ground. Given this state of affairs the program committee of the Mid South Conference on Human Neuropsychology decided to focus on the role of neuropsychologists in rehabilitation. **Handbook of Clinical Trials** P. Brouwers, E.

Mohr, 1991-01-01 Behavior is an aspect of clinical trials that has been somewhat neglected and the problems associated with behavioral assessment and control in clinical trials are complex. These contributions deal with the selection and application of assessment techniques in different patient populations. The Effectiveness of Rehabilitation for Cognitive Deficits Peter W. Halligan, Derick T. Wade, 2005 In this book some of the leading clinicians and cognitive neuroscientists consider the effectiveness of cognitive rehabilitation. They situate the issues within an overall context that considers the different types and levels of diagnosis and assessment, the adequacy of underlying cognitive theory for rehabilitation and more importantly the clinical effectiveness of current treatments to improve functional recovery. By employing an evidence based approach that critically evaluates the published literature the book provides for a better understanding of the strengths and limitations of the cognitive approach and hopefully a more realistic expectation of its outcome for patients with neurological deficits. The book will serve as a valuable source for a wide spectrum of professionals who deal with the neuropsychological and neurological effects of brain damage. **BOOK JACKET** Neurorehabilitation Technology David J.
