Silicon Carbide and Related Materials 2003 Roland Madar, Jean Camassel, Elisabeth Blanquet, 2002 **Silicon Carbide and Related Materials ...**, 2006 **Silicon Carbide and Related Materials 2004** Roberta Nipoti, Antonella Poggi, Andrea Scorzoni, 2005 Silicon Carbide SiC Gallium Nitride GaN and Diamond are examples of wide bandgap semiconductors having chemical electrical and optical properties which make them very attractive for the fabrication of high power and high frequency electronic devices as well as of light emitters and sensors which have to operate under harsh conditions The book comprises the proceedings of the 5th edition of the European Conference on Silicon Carbide and Related Materials held from the 31st August to the 4th September 2004 in Bologna Italy This conference series here continued its tradition of being the main European forum for exchanging results and discussing progress between those university and industry researchers who are most active in the fields of SiC and related materials Attendees at the conference highlighted the progress made in material growth technology characterization of material properties and technological processing for electronic applications Many electronics devices were presented including high voltage high power density and high temperature components as well as microwave components Radiation hard sensors were also presented These proceedings fully document the latest experimental and theoretical understanding of the growth of bulk and epitaxial layers the properties of the resultant materials the development of suitable processes and of electronic devices that can best exploit and benefit from the outstanding physical properties that are offered by wide bandgap materials **Defects in Microelectronic Materials and Devices** Daniel M. Fleetwood, Ronald D. Schrimpf, 2008-11-19 Uncover the Defects that Compromise Performance and Reliability As microelectronics features and devices become smaller and more complex it is critical that engineers and technologists completely understand how components can be damaged during the increasingly complicated fabrication processes required to produce them A comprehensive survey of defects *Silicon Carbide and Related Materials - 2005* Robert P. Devaty, David J. Larkin, Stephen E. Saddow, 2006 Silicon Carbide SiC Gallium Nitride GaN and Diamond are examples of wide bandgap semiconductors having chemical electrical and optical properties which make them very attractive for the fabrication of high power and high frequency electronic devices as well as light emitters and sensors which have to operate under harsh conditions **Silicon Carbide and Related Materials 2003** R. Neudeck, Stephen E. Saddow, 2004-08-24 Silicon carbide SiC is a wide bandgap semiconductor that can operate at temperatures well above 300 C where silicon cannot perform In addition due to a high thermal conductivity equal to copper at room temperature SiC is an ideal candidate for operation in harsh

environments and at high power levels Rapid advances in SiC materials and devices have recently resulted in implementation of SiC based electronic systems and the impact of these devices is expected to significantly increase in the next several years This book documents the most recent results on growth of bulk and epitaxial layers physical and structural properties process technology and device development obtained since the 10th International Conference on Silicon Carbide and Related Materials 2003 ICSCRM2003 held in Lyon France Extended defects in silicon carbide are highlighted The nature of defects induced by forward biasing of bipolar devices as well as methods to suppress the degradation are addressed **Silicon**
