Moss' Radiation Oncology William Thomas Moss, 1994 A Brandon Hill Title *Moss' Radiation Oncology* James D. Cox, 1992-05-01 *Radiation Oncology for Cure and Palliation* R.G. Parker, N.A. Janjan, M.T. Selch, 2013-06-29 Given that treatment with curative intent is possible in only one half of cancer victims and that such treatment frequently fails the majority of patients with cancer will require relief of symptoms and signs caused by their disease In this book the specific contribution of radiation therapy to palliation is considered within the context of multidisciplinary management Individual chapters are devoted to palliative radiation therapy for primary tumours and metastases at different sites The management of pain is discussed and chapters are also devoted to end of life care the management of complications of radiation therapy and useful medications This book will prove useful to radiation oncologists and medical students *Radiation Oncology* Carlos A. Perez, Luther W. Brady, 2011 Ideal for on the spot consultation this pocket manual Radiation Oncology Management Decisions provides easily accessible information for residents and practitioners in radiation oncology It presents the most essential information that is immediately required in the clinical setting The first eight chapters of the book focus on key basic concepts the remaining 46 chapters describe treatment regimens for all cancer sites and tumor types Includes coverage of pain and palliation and covers all latest therapeutic techniques This edition includes expanded information on image guided therapy 3D techniques and 4D protocols The updated cancer staging guidelines have been used throughout the manual In addition there is a brand new chapter devoted to QUANTEC dosage recommendations *Radiation Damage in Biomolecular Systems* Gustavo García Gómez-Tejedor, Martina Christina Fuss, 2012-01-04 Since the discovery of X rays and radioactivity ionizing radiations have been widely applied in medicine both for diagnostic and therapeutic purposes The risks associated with radiation exposure and handling led to the parallel development of the field of radiation protection Pioneering experiments done by Sanche and co workers in 2000 showed that low energy secondary electrons which are abundantly generated along radiation tracks are primarily responsible for radiation damage through successive interactions with the molecular constituents of the medium Apart from ionizing processes which are usually related to radiation damage below the ionization level low energy electrons can induce molecular fragmentation via dissociative processes such as internal excitation and electron attachment This prompted collaborative projects between different research groups from European countries together with other specialists from Canada the USA and Australia This book summarizes the advances achieved by these research groups after more than ten years of studies on radiation damage in biomolecular systems An extensive Part I deals with recent experimental and theoretical findings on radiation induced damage at the molecular level It includes many contributions on electron and positron collisions with biologically relevant molecules X ray and ion interactions are also covered Part II addresses different approaches to radiation damage modelling In Part III biomedical aspects of radiation effects are treated on different scales After the physics oriented focus of the previous parts there is a

gradual transition to biology and medicine with the increasing size of the object studied Finally Part IV is dedicated to current trends and novel techniques in radiation research and the applications hence arising It includes new developments in radiotherapy and related cancer therapies as well as technical optimizations of accelerators and totally new equipment designs giving a glimpse of the near future of radiation based medical treatments
