Computational Neuroscience: Theoretical Insights into Brain Function Paul Cisek, Trevor Drew, John Kalaska, 2007-11-14 Computational neuroscience is a relatively new but rapidly expanding area of research which is becoming increasingly influential in shaping the way scientists think about the brain Computational approaches have been applied at all levels of analysis from detailed models of single channel function transmembrane currents single cell electrical activity and neural signaling to broad theories of sensory perception memory and cognition This book provides a snapshot of this exciting new field by bringing together chapters on a diversity of topics from some of its most important contributors This includes chapters on neural coding in single cells in small networks and across the entire cerebral cortex visual processing from the retina to object recognition neural processing of auditory vestibular and electromagnetic stimuli pattern generation voluntary movement and posture motor learning decision making and cognition and algorithms for pattern recognition Each chapter provides a bridge between a body of data on neural function and a mathematical approach used to interpret and explain that data These contributions demonstrate how computational approaches have become an essential tool which is integral in many aspects of brain science from the interpretation of data

to the design of new experiments and to the growth of our understanding of neural function Includes contributions by some of the most influential people in the field of computational neuroscience Demonstrates how computational approaches are being used today to interpret experimental data Covers a wide range of topics from single neurons to neural systems to abstract models of learning

Computational Intelligence Amit Konar, 2006-01-16 Computational Intelligence Principles Techniques and Applications presents both theories and applications of computational intelligence in a clear precise and highly comprehensive style The textbook addresses the fundamental aspects of fuzzy sets and logic neural networks evolutionary computing and belief networks The application areas include fuzzy databases fuzzy control image understanding expert systems object recognition criminal investigation telecommunication networks and intelligent robots The book contains many numerical examples and homework problems with sufficient hints so that the students can solve them on their own

Constructionism in Practice Yasmin B. Kafai, Mitchel Resnick, 2012-11-12 The digital revolution necessitates but also makes possible radical changes in how and what we learn This book describes a set of innovative educational research projects at the MIT Media Laboratory illustrating how new computational technologies can transform our conceptions of learning education and knowledge The book draws on real world education experiments conducted in formal and informal contexts from inner city schools and university labs to neighborhoods and after school clubhouses The papers in this book are divided in four interrelated sections as follows Perspectives in Constructionism further develops the intellectual underpinnings of constructionist theory This section looks closely at the role of perspective taking in learning and discusses how both cognitive and affective processes play a central role in building connections between old and new knowledge Learning through Design analyzes the relationship between designing and learning and discusses ways that design activities can provide personally meaningful contexts for learning This section investigates how and why children can learn through the processes of constructing artifacts such as games textile patterns robots and interactive devices Learning in Communities focuses on the social aspects of constructionist learning recognizing that how people learn is deeply influenced by the communities and cultures with which they interact It examines the nature of learning in classroom inner city and virtual communities Learning about Systems examines how students make sense of biological technological and mathematical systems This section explores the conceptual and epistemological barriers to learning about feedback self organization and probability and it discusses new technological tools and activities that can help people develop new ways of thinking about these phenomena

Natural Language Processing and Computational Linguistics 2 Mohamed Zakaria Kurdi, 2018-02-28 Natural Language Processing NLP is a scientific discipline which is found at the intersection of fields such as Artificial Intelligence Linguistics and Cognitive Psychology This book presents in four chapters the state of the art and fundamental concepts of key NLP areas Are presented in the first chapter the fundamental concepts in lexical semantics lexical databases knowledge representation paradigms and ontologies The second chapter is about combinatorial and formal

semantics Discourse and text representation as well as automatic discourse segmentation and interpretation and anaphora resolution are the subject of the third chapter Finally in the fourth chapter I will cover some aspects of large scale applications of NLP such as software architecture and their relations to cognitive models of NLP as well as the evaluation paradigms of NLP software Furthermore I will present in this chapter the main NLP applications such as Machine Translation MT Information Retrieval IR as well as Big Data and Information Extraction such as event extraction sentiment analysis and opinion mining
