Space Telescopes Neil English, 2016-11-08 Space telescopes are among humankind's greatest scientific achievements of the last fifty years This book describes the instruments themselves and what they were designed to discover about the Solar System and distant stars Exactly how these telescopes were built and launched and the data they provided is explored Only certain kinds of radiation can penetrate our planet's atmosphere which limits what we can observe But with space telescopes all this changed We now have the means to see beyond Earth using ultraviolet microwave and infrared rays X rays and gamma rays In this book we meet the pioneers and the telescopes that were built around their ideas This book looks at space telescopes not simply chronologically but also in order of the electromagnetic spectrum making it possible to understand better why they were made

Rieke, 2021-11-09 The Spitzer Space Observatory originally known as the Space Infrared Telescope Facility SIRTf is the last of the four Great Observatories which also include the Hubble Space Telescope the Chandra X-ray Observatory and the Compton Gamma Ray Observatory Developed over twenty years and dubbed the Infrared Hubble Spitzer was launched in the summer of 2003 and has since contributed significantly to our understanding of the universe George Rieke played a key role in Spitzer and now relates the story of how that observatory was built and launched into space Telling the story of this single mission within the context of NASA space science over two turbulent decades he describes how after a tortuous political trail to approval Spitzer was started at the peak of NASA's experiment with streamlining and downsizing its mission development process termed faster better cheaper Up to its official start and even afterward Spitzer was significant not merely in terms of its scientific value but because it stood at the center of major changes in space science policy and politics Through interviews with many of the project participants Rieke reconstructs the political and managerial process by which space missions are conceived approved and developed He reveals that by the time Spitzer had been completed a number of mission failures had undermined faith in faster better cheaper and a more conservative approach was imposed Rieke examines in detail the premises behind faster better cheaper their strengths and weaknesses and their ultimate impact within the context of NASA's continuing search for the best way to build future missions Rieke's participant's perspective takes readers inside Congress and NASA to trace the progress of missions prior to the excitement of the launch revealing the enormously complex and often disheartening political process that needs to be negotiated He also shares some of the new observations and discoveries made by Spitzer in just its first year of operation As the only book devoted to the Spitzer mission The Last of the Great Observatories is a story at the nexus of politics and science shedding new light on both spheres as it contemplates the future of mankind's exploration of the universe
