Tan, 2004 New Developments in Sensing Technology for Structural Health Monitoring Subhas Chandra Mukhopadhyay, 2011-07-14 The book has focussed on the different aspects of sensing technology i.e. high reliability adaptability recalibration information processing data fusion validation and integration of novel and high performance sensors specifically aims to use to inspect mechanical health of structure and similar applications This book is dedicated to Sensing systems for Structural Health Monitoring offers to variety of users namely Master and PhD degree students researchers practitioners especially Civil and Construction engineers The book will provide an opportunity of a dedicated and a deep approach in order to improve their knowledge in this specific field The Orland Project Robert Autobee, 1993 **Advanced Dam Engineering for Design, Construction, and Rehabilitation** R.B. dam during first filling In this extensive book a new numerical simulate method is suggested The method is based on the conventional two dimensional finite element technique and the theoretical formulations to calculate energy release rate using virtual crack extension method The influence factors on convergence of calculated J integral are investigated The accuracy of the calculated J integral is verified by analysing the three typical problems in Fracture Mechanics in which propagation of crack may follow mode I mode II and mixed mode I II respectively Using the new numerical method the factors affecting the occurrence of hydraulic fracturing in the earth rock fill dam are investigated The investigating results indicate that increasing any of the Young s modulus the Poisson s ratio and the density of the core soil is helpful to reduce the likelihood of the occurrence of hydraulic fracturing The likelihood of the occurrence of hydraulic fracturing increases with increasing the water level or the crack depth The lower part of the dam core is the zone in which the phenomenon of hydraulic fracturing may be induced easily As an example to analyse the ability of earth rock fill dam to resist hydraulic fracturing the Nuozhadu Dam located in Western China is analysed Presents a systematic and comprehensive study of hydraulic fracturing original in its concentration of core soil problems Focuses on the problem of hydraulic fracturing in earth rock fill dams from three aspects conditions and mechanisms of hydraulic fracturing criterion of hydraulic fracturing and numerical method on hydraulic fracturing Examines advanced laboratory soil testing application of numerical methods and field testing monitoring all needed for a better understanding of hydraulic fracturing in earth rock fill dams Provides an essential reference in an area of scarce research in this field and the need in high earth dam construction in developing countries is pressing Ideal for researchers in Hydraulic and Geotechnical Engineering Fields Students on Masters or PhD courses as well as Designers and Constructors in Hydraulic and Geotechnical Engineering Fields *Non-conventional Construction of Concrete Dams and Rock Foundations* Yu A.
