## **New Developments In Lie Theory Their A:**

**New Developments in Lie Theory and Their Applications** Juan Tirao, Wallach, 2012-12-06 Representation theory and more generally Lie theory has played a very important role in many of the recent developments of mathematics and in the interaction of mathematics with physics In August September 1989 a workshop Third Workshop on Representation Theory of Lie Groups and its Applications was held in the environs of Córdoba Argentina to present expositions of important recent developments in the field that would be accessible to graduate students and researchers in related fields This volume contains articles that are edited versions of the lectures and short courses given at the workshop Within representation theory one of the main open problems is to determine the unitary dual of a real reductive group Although this problem is as yet unsolved the recent work of Barbasch Vogan Arthur as well as others has shed new light on the structure of the problem The article of D Vogan presents an exposition of some aspects of this problem emphasizing an extension of the orbit method of Kostant Kirillov Several examples are given that explain why the orbit method should be extended and how this extension should be implemented

**New Developments in Lie Theory and Its Applications** Carina Boyallian, Esther Galina, Linda Saal, 2011 This volume contains the proceedings of the Seventh Workshop in Lie Theory and Its Applications which was held November 27 December 1 2009 at the Universidad Nacional de Córdoba in Córdoba Argentina The workshop was preceded by a special event Encuentro de teoría de Lie held November 23 26 2009 in honour of the sixtieth birthday of Jorge A Vargas who greatly contributed to the development of Lie theory in Córdoba This volume focuses on representation theory harmonic analysis in Lie groups and mathematical physics related to Lie theory The papers give a broad overview of these subjects and also of the recent developments of the authors research

**New Developments in Lie Theory and Geometry** Carolyn Gordon, 2009 This volume is an outgrowth of the Sixth Workshop on Lie Theory and Geometry held in the province of Córdoba Argentina in November 2007 The representation theory and structure theory of Lie groups play a pervasive role throughout mathematics and physics Lie groups are tightly intertwined with geometry and each stimulates developments in the other The aim of this volume is to bring to a larger audience the mutually beneficial interaction between Lie theorists and geometers that animated the workshop Two prominent themes of the representation theoretic articles are Gelfand pairs and the representation theory of real reductive Lie groups Among the more geometric articles are an exposition of major recent developments on noncompact homogeneous Einstein manifolds and aspects of inverse spectral geometry presented in settings accessible to readers new to the area

*New Developments in Lie Theory and Their Applications* Juan Tirao, 1992-10-01 **Séminaire de Théorie Des Nombres** Sinnou David, 1993 Based on the lectures given at the Séminaire de Théorie des Nombres de Paris in 1990 1991 this collection of papers reflects work in many areas of number theory including cubic exponential sums Riemann's period relations and Galois representations attached to points on Shimura varieties

*Geometry and Spectra of Compact Riemann Surfaces* Peter Buser, 2010-10-29 This monograph is a self

contained introduction to the geometry of Riemann Surfaces of constant curvature 1 and their length and eigenvalue spectra It focuses on two subjects the geometric theory of compact Riemann surfaces of genus greater than one and the relationship of the Laplace operator with the geometry of such surfaces Research workers and graduate students interested in compact Riemann surfaces will find here a number of useful tools and insights to apply to their investigations Recent Advances in Harmonic Analysis and Partial Differential Equations Andrea R. Nahmod, 2012 This volume is based on the AMS Special Session on Harmonic Analysis and Partial Differential Equations and the AMS Special Session on Nonlinear Analysis of Partial Differential Equations both held March 12-13 2011 at Georgia Southern University Statesboro Georgia as well as the JAMI Conference on Analysis of PDEs held March 21-25 2011 at Johns Hopkins University Baltimore Maryland These conferences all concentrated on problems of current interest in harmonic analysis and PDE with emphasis on the interaction between them This volume consists of invited expositions as well as research papers that address prospects of the recent significant development in the field of analysis and PDE The central topics mainly focused on using Fourier spectral and geometrical methods to treat wellposedness scattering and stability problems in PDE including dispersive type evolution equations higher order systems and Sobolev spaces theory that arise in aspects of mathematical physics The study of all these problems involves state of the art techniques and approaches that have been used and developed in the last decade The interrelationship between the theory and the tools reflects the richness and deep connections between various subjects in both classical and modern analysis *Lectures on the Geometry of Poisson Manifolds* Izu Vaisman, 2012-12-06 This book is addressed to graduate students and researchers in the fields of mathematics and physics who are interested in mathematical and theoretical physics differential geometry mechanics quantization theories and quantum physics quantum groups etc and who are familiar with differentiable and symplectic manifolds The aim of the book is to provide the reader with a monograph that enables him to study systematically basic and advanced material on the recently developed theory of Poisson manifolds and that also offers ready access to bibliographical references for the continuation of his study Until now most of this material was dispersed in research papers published in many journals and languages The main subjects treated are the Schouten-Nijenhuis bracket the generalized Frobenius theorem the basics of Poisson manifolds Poisson calculus and cohomology quantization Poisson morphisms and reduction realizations of Poisson manifolds by symplectic manifolds and by symplectic groupoids and Poisson Lie groups The book unifies terminology and notation It also reports on some original developments stemming from the author's work including new results on Poisson cohomology and geometric quantization cofoliations and biinvariant Poisson structures on Lie groups **Algebraic Geometry and Singularities** Antonio Campillo Lopez, Luis Narvaez Macarro, 2012-12-06 The focus of this volume lies on singularity theory in algebraic geometry It includes papers documenting recent and original developments and methods in subjects such as resolution of singularities D-module theory singularities of maps and geometry of curves The papers originate from the Third International Conference on

Algebraic Geometry held in La Rbida Spain in December 1991 Since then the articles have undergone a meticulous process of refereeing and improvement and they have been organized into a comprehensive account of the state of the art in this field

**Symplectic Geometry** B. Aebischer, M. Borer, M. Kälin, C. Leuenberger, Hans Martin Bach, 2013-06-29 The seminar Symplectic Geometry at the University of Berne in summer 1992 showed that the topic of this book is a very active field where many different branches of mathematics come together differential geometry topology partial differential equations variational calculus and complex analysis As usual in such a situation it may be tedious to collect all the necessary ingredients The present book is intended to give the nonspecialist a solid introduction to the recent developments in symplectic and contact geometry Chapter 1 gives a review of the symplectic group  $Sp(n, \mathbb{R})$  symplectic manifolds and Hamiltonian systems last but not least to fix the notations The Maslov index for closed curves as well as arcs in  $Sp(n, \mathbb{R})$  is discussed This index will be used in chapters 5 and 8 Chapter 2 contains a more detailed account of symplectic manifolds starting with a proof of the Darboux theorem saying that there are no local invariants in symplectic geometry The most important examples of symplectic manifolds will be introduced cotangent spaces and Kähler manifolds Finally we discuss the theory of coadjoint orbits and the Kostant-Souriau theorem which are concerned with the question of which homogeneous spaces carry a symplectic structure
