New Directions In The Philosophy Of Technology:

New Directions in the Philosophy of Technology Joseph C. Pitt, 2013-03-09 In this collection we finally find the philosophy of technology a young and rapidly developing area of scholarly interest making contact with history of science and technology and mainstream epistemological and metaphysical issues The sophistication of these papers indicates the maturity of the field as it moves away from the advocacy of anti technology ideological posturing toward a deeper understanding of the options and restraints technological developments provide The papers presented here take us over a threshold into the real world of complicated social and technological interactions where science and art are shown to be integral to our understanding of technological change and technological innovations are seen as configuring our knowledge of the world and opening up new possibilities for human development With its rich historical base this volume will be of interest to all students concerned about the interactions among technology society and philosophy **Plato the Myth**

Maker Luc Brisson, 1998 We think of myth as a fictional story and Plato was the first to use the term muthos in that sense But Plato also used muthos to describe the practice of making and telling stories the oral transmission of all that a community keeps in its collective memory In the first part of Plato the Myth Maker Luc Brisson reconstructs Plato's multifaceted and not uncritical description of muthos in light of the latter's famous Atlantis story The second part of the book contrasts this sense of myth as Plato does with another form of speech that he believed was far superior the logos of philosophy Appearing for the first time in English Plato the Myth Maker is a solid and important contribution to the history of myth based on the privileged testimony of one of its most influential critics and supporters **New Directions in**

Educational Technology Eileen Scanlon, Tim O'Shea, 2012-12-06 This book is based on the workshop that kickstarted the NATO Science Committee Special Programme on Advanced Educational Technology We invited the leaders in the field to attend this inaugural meeting and were delighted by the quality of the attendance the papers delivered at the workshop and this book Many of the authors have subsequently run other meetings funded by the Special Programme and have or are in the process of editing books which focus on particular topics This book covers all the major themes in the area ranging from fundamental theoretical work to empirical studies of state of the art technological innovations Tim O Shea chaired the NATO Survey Group which planned the Programme and the subsequent Panel which disbursed funds in the first two years of the Programme He would like to thank the other group and panel members namely Professor N Balacheff Professor D Bjomer Professor H Bouma Professor P C Duchastel Professor A Dias de Figueiredo Dr D Jonassen and Professor T Liao He would like to offer his special thanks to Dr L V da Cunha the NATO Programme Director for his unfailing support and patience Eileen Scanlon was the Director of the Workshop which is the basis of this book She offers heartfelt thanks to the contributors and to the following who provided practical help with the meeting or the production of this book Mrs Pauline Adams Dr Mike Baker Mrs Kathy Evans Mrs Patricia Roe Mr Dave Perry and Ms Fiona Spensley Science, Technology and

Society Wenceslao J. González, 2005 The emphasis on the realm of Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past It is a social turn which affects philosophy of science as well as philosophy of technology It includes a new vision of the aims processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant This turn highlights science and technology as social undertakings rather than intellectual contents According to this new vision there are several important changes as to what should be studied the objects of research how it should be studied the method and what the consequences for those studies are The new focus of attention can be seen in many changes and among them are several of special interest a from what science and technology are in themselves mainly epistemic contents to how science and technology are made largely social constructions b from the language and structure of basic science to the characteristics of applied science and the applications of science c from technology as a feature through which human beings control their natural surroundings a step beyond technics due to the contribution of science to technology as a social practice and an instrument of power and d from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values cultural political economic of science and technology Wenceslao J Gonzalez is professor of logic and philosophy of science at the University of A Coru a Spain He has been vicedean of the School of Humanities and president of the Committee of Doctoral Programs at the University He has been a visting researcher at the Universities of St Andrews M nster and London London School of Economics as well as Visiting fellow at the Center for Philosophy of Science University of Pittsburgh He has given lectures at the Universities of Pittsburgh Stanford Quebec and Helsinki The conferences in which he has participated include those organized by the Universities of Uppsala New South Wales Bologne and Canterbury New Zealand He has edited 20 volumes and published 70 papers He is the editor of the monographic issues on Philosophy and Methodology of Economics 1998 and Lakatos s Philosophy Today 2001 His writings include Economic Prediction and Human Activity An Analysis of Prediction in Economics from Action Theory 1994 On the Theoretical Basis of Prediction in Economics 1996 Rationality in Economics and Scientific Predictions A Critical Reconstruction of Bounded Rationality and its Role in Economic Predictions 1997 Lakatos s Approach on Prediction and Novel Facts 2001 Rationality in Experimental Economics An Analysis of R Selten s Approach 2003 From Erkl renVerstehen to PredictionUnderstanding The Methodological Framework in Economics 2003 and The Many Faces of Popper s Methodological Approach to Prediction 2004 The Ethics of Ordinary Technology Michel Puech, 2016-04-28 Technology is even more than our world our form of life our civilization Technology interacts with the world to change it Philosophers need to seriously address the fluidity of a smartphone interface the efficiency of a Dyson vacuum cleaner or the familiar noise of an antique vacuum cleaner Beyond their phenomenological description the emotional experience acquires moral significance and in some cases even supplies ethical resources for the

self If we leave this dimension of modern experience unaddressed we may miss something of value in contemporary life Combining European humanism Anglophone pragmatism and Asian traditions Michel Puech pleads for an ethical turn in the way we understand and address technological issues in modern day society Puech argues that the question of power is what needs to be reconsidered today In doing so he provides a three tier distinction of power power to modify the outer world our first intention method in any case technology power over other humans our enduring obsession politics and domination power over oneself ethics and wisdom New Directions in Educational Technology and Administration Fred Paas,Srikanta Patnaik,Taosheng Wang,2025-07-14 New Directions in Educational Technology and Administration emphasize the integration of cutting edge tools like artificial intelligence big data and augmented reality to enhance teaching and learning experiences This volume focus on creating more personalized accessible and equitable education systems that cater to diverse learners At the same time administrative innovations prioritize data driven decision making and streamlined operations to foster efficient institutional management This volume also explores the most recent innovations and significant developments in the domain of Educational Technology and Administration offering a thorough overview of the current landscape It encompasses various dimensions including Learning Analytics and Curriculum Design Online and Distance Learning Leadership in Modern Education By merging theoretical knowledge with practical applications this book empowers educators researchers practitioners and students to navigate and excel with the New Directions in Educational Technology and Administration with a focus on responsible technology for assessment and feedback the book address challenges like digital equity and ethical implementation By embracing these new directions the education sector is poised to redefine learning environments and empower future generations *Heraclitus Redux: Technological Infrastructures and Scientific Change* Joseph C. Pitt,2019-10-25 Scientific change is often a function of technological innovation new instruments show us new things we could not see before and we then need new theories to explain them One of the results of this process is that what counts as scientific evidence changes and how we do our science changes Hitherto the technologies which make contemporary science possible have been ignored This book aims to correct that omission and to spell out the consequences of taking the technologies behind the doing of science seriously *Inside the Politics of Technology* Hans Harbers,2005 Though the old saying claims that man is the measure of all things the authors of Inside the Politics of Technology argue that the distinction implied between autonomous humans and neutral instruments of technology is an illusion On the contrary the technologies humans create simultaneously shape humans themselves By means of case studies of technologies as diverse as video cameras electric cars pregnancy tests and genetic screenings this volume considers the implications of this co production of technology and society for our philosophical and political ideas Are only humans endowed with social political and moral agency or does our technology share those qualities And if so how should we understand or practice a politics of technology Epistemology and the Social ,2015-06-29 Epistemology had to come to terms with the social on two different occasions

The first was represented by the dispute about the epistemological status of the social sciences and in this case the already well established epistemology of the natural sciences seemed to have the right to dictate the conditions for a discipline to be a science. But the social sciences could successfully vindicate the legitimacy of their specific criteria for scientificity. More recently the impact of social factors on the construction of our knowledge including scientific knowledge has reversed in a certain sense the old position and promoted social inquiry to the role of a criterion for evaluating the purport of cognitive including scientific statements. But this has undermined the traditional characteristics of objectivity and rigor that seem constitutive of science. Moreover in order to establish the real extent to which social conditionings have an impact on scientific knowledge one must credit sociology with a sound ground of reliability and this is not possible without a preliminary epistemological assessment. These are some of the topics discussed in this book both theoretically and with reference to concrete cases.

Beyond Cutting Edge? Paul C. Heidebrecht, 2014-03-10. A quick scan of any newsstand is enough to confirm the widespread preoccupation with technological change. As a myriad of articles and advertisements demonstrate not only are we preoccupied with technology but we are bombarded with numerous reminders that the cutting edge is in constant motion. Most often the underlying assumption of Christians is that we have no choice but to find ways to cope with the latest and greatest. Indeed it is often assumed that the church has no choice but to find ways to cope with its new technological context. This book does not make the same assumptions. Building on the work of Mennonite theologian John Howard Yoder it argues that the practices of the church make it possible for Christians to conscientiously engage technology. This happens when we recognize that marks of the church such as patience, vulnerability, and servanthood can put technological ideals such as speed, control, and efficiency in their proper place. In the course of grappling with three examples of morally formative technologies: automobiles, genetically modified food, and the Internet, this book goes beyond Yoder's thought by emphasizing that the church also plays a crucial role in our moral formation.
