Multiple Sclerosis Michael Olek, 2007-10-27 A synthesis of current concepts about the evaluation treatment and future directions in MS On the evaluation side the authors review the use of MRI magnetic resonance spectroscopy functional MRI and three dimensional MRI and consider the rapidly developing body of pathologic information they have yielded On the treatment side the focus is on recently approved medications Novantrone new indications for medications CHAMPS Trial medications in development Oral Interferon Tau Oral Copaxone and Oral Cellcept immunosuppressive therapy for both progressive disease and symptomatic therapy the current medications for treating relapsing remitting MS Avonex Betaseron and Copaxone are also discussed For future directions the authors present the current best thinking as well as the latest discoveries in immunology relating to MS including groundbreaking B cell research and its applications to specific immunotherapies and the use of immune markers for tracking the disease

**Normal-appearing White and Grey Matter Damage in Multiple Sclerosis** M. Filippi, G. Comi, M. Rovaris, 2012-12-06 In the last few years increasing effort has been devoted to better define the characteristics of tissue damage occurring outside MRI visible lesions in patients with multiple sclerosis MS and as a consequence to improve our understanding of the disease pathobiology and of the mechanisms leading to the accumulation of irreversible disability This book provides an updated review of the results obtained by leading research groups in this field The potential clinical applications of what has been shown so far as well as the areas for future research in the study of normal appearing white and gray matter damage in MS are extensively discussed making this book a valuable tool for clinical neurologists who are involved in the daily life care of MS patients and for neuroscientists involved in MS research

The diverse available MR techniques such as magnetization transfer MRI diffusion weighted MRI MR spectroscopy functional MRI cell specific MRI perfusion MRI and microscopic imaging with ultra high field MRI offer an extraordinarily powerful means of gaining fundamental in vivo insights into disease processes The strengths and weaknesses of all these techniques in the study of multiple sclerosis and other relevant diseases are extensively considered After an introductory section on neuroimaging technology subsequent sections address disorders of myelination demyelinating diseases immune mediated disorders and white matter disorders related to aging and other conditions This book provides a valuable summary of the state of the art in the field and defines important areas for future research
