[Computer Architectures for Spatially Distributed Data](#) Herbert Freeman, G.G. Pieroni, 2013-11-09 These are the proceedings of a NATO Advanced Study Institute ASI held in Cetraro Italy during 6-17 June 1983 The title of the ASI was Computer Architectures for Spatially Distributed Data and it brought together some 60 participants from Europe and America Presented here are 21 of the lectures that were delivered The articles cover a wide spectrum of topics related to computer architecture's specially oriented toward the fast processing of spatial data and represent an excellent review of the state of the art of this topic For more than 20 years now researchers in pattern recognition image processing meteorology remote sensing and computer engineering have been looking toward new forms of computer architectures to speed the processing of data from two and three dimensional processes The work can be said to have commenced with the landmark article by Steve Unger in 1958 and it received a strong forward push with the development of the ILIAC III and IV computers at the University of Illinois during the 1960's One clear obstacle faced by the computer designers in those days was the limitation of the state of the art of hardware when the only switching devices available to them were discrete transistors As a result parallel processing was generally considered to be impractical and relatively little progress was made
