New Directions In Ophthalmic Research:

New Directions in Ophthalmic Research Marvin L. Sears, 1981-01-01 **Current Catalog** National Library of Medicine (U.S.), 1982 First multi year cumulation covers six years 1965 70 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), *Ophthalmology* Myron Yanoff, Jay S. Duker, 2009-01-01 Based on feedback the authors have streamlined their bestselling reference to zero in on just the clinical answers ophthalmologists need in day to day practice This new edition presents unparalleled guidance on nearly every ophthalmic condition and procedure

Published Scientific Papers of the National Institutes of Health National Institutes of Health (U.S.), 1982 Each issue lists papers published during the preceding year **Spectroscopy of Biological Molecules: New Directions** Jan Greve, Gerwin Jan Puppels, Cees Otto, 2012-12-06 Investigation of the structure and function of biological molecules through spectroscopic methods is a field rich in revealing clever techniques and demanding experiments It is most gratifying to see that the basic concepts are applied to more and more complex systems making feasible the study of the behaviour of whole systems in relation to molecular disturbances The analytical potential of spectroscopy and spectroscopic imaging enables species identification of bacteria and tissue recognition Clear opportunities for in vivo applications become apparent in the medical field The methods developed in biophysics start to generate spin off in the direction of biotechnology where in previous years we have seen this happen for biochemical techniques New directions are manifest Tools are being developed to investigate the behaviour of single molecules in interaction with their environment Individual interactions can now be investigated and individual molecules in complexes can be visualized Processes that were previously unobservable as a result of ensemble averaging can now be investigated on a single molecule level Completely new information with regard to molecular behaviour is obtained in this way The insights amaze us and the prospect that this development will continue is exciting The 8th European Conference on the Spectroscopy of Biological Molecules is proud to have contributed to the dissemination of these new directions This proceedings book is an appropriate reflection of the progress obtained so far in the spectroscopy of biological molecules Neurochemical Systems Abel Lajtha, 2013-03-14 **Pathological Neurochemistry** Abel Lajtha, 2013-03-14 More than for any other volume of the Handbook of Neurochemistry the chapters in this volume on Pathological Neurochemistry deal with the interface of the laboratory bench with the patient's bedside Most of the chapters reflect the confluence of basic scientists clinical investigators and physicians Considered here are many of the more important disorders that afflict the nerves muscles spinal cord and or brain of mankind throughout the world There are well over 500 such disorders And our understanding of their nature and of measures for effective prevention or treatment depends significantly on application of the biochemical disciplines that characterize neurochemistry Before World War II any attempt to compile a volume on pathological neurochemistry would have been largely descriptive and very rudimentary as such handbooks by Hans Winterstein 1929 Irvine Page 1937 and others demonstrate But thanks to the many

major advances in research and technology in the postwar decades we now stand at the threshold of understanding how to manage many of the major neurological disorders and we may expect more such delineations in the immediate decades ahead. Neurochemistry defined broadly has played a central role in this extraordinary turn of events progressing from what J. L. W. Thudichum in 1884 called objects of anxious empiricism to his anticipation of the proud exercise of chemical precision.

Pharmacology of the Eye M.L. Sears, 2012-12-06. Roots of the theory and practice of ocular pharmacology may be traced to the ancient Mesopotamian code of Hammurabi and then to several papyri reflecting the clinical interests of the Egyptians. The evolution of its art and science was irregularly paced until the nineteenth century when Kohler in 1884 proved the anesthetic effect of cocaine on the cornea and when Fraser, Laquer, Schmiedeberg, Meyer and others studied the pharmacology of the autonomic nervous system by way of observations of the pupil. Advances in the past few decades have been nothing short of explosive. How can the student physician or basic research scientist stay in touch with these electrifying studies? To help with the answer to this question the authors set as their goal the development of increased understanding so that the student research scientist and ophthalmologist can cope with the latest discoveries. The authors want to narrow what appears to be an ever increasing gap between basic science and ophthalmology. The basic aspects of pharmacology have been presented in light of the natural physiology. In this regard while distinctions among endogenous mechanisms, drug effects and the pathogenesis of disease are to be separately recognized, appreciation must be given to the concept that both the desirable and unwanted manifestations or functions caused by either disease or drugs must very often represent a quantitative change in normal metabolic pathways.

Update on Polymers for Ocular Drug Delivery Atish S. Mundada, 2011-12-20. The eye is the most easily accessible site for topical administration of a medication. Drugs are commonly applied to the eye for localized action on the surface or in the interior of the eye. A major problem in ocular therapeutics is the attainment of an optimal drug concentration at the site of action. Poor bioavailability of drugs from ocular dosage forms is mainly due to the precorneal loss factors which include tear dynamics, non-productive absorption, transient residence time in the cul de sac and the relative impermeability of the corneal epithelial membrane. Due to these physiological and anatomical constraints only a small fraction of the drug effectively 1% or even less of the instilled dose is ocularly absorbed. The effective dose of medication administered ophthalmically may be altered by increasing the retention time of medication in contact with the surface of the eye. To date Pharmaceutical Technologists have tried to develop different novel formulations like gel, ocular inserts, collagen shields, implants, liposomes, nanoparticles, penetration enhancers and in situ gelling systems in order to increase the bioavailability and duration of the therapeutic action of ocular drugs and polymers play an important role in all these approaches. This book provides detailed information regarding all such polymers which have been used and shown to be excellent in improving the bioavailability of ocular drugs.
