A. Paul, 2014-11-06 As we live our lives we repeatedly make decisions that shape our future circumstances and affect the sort of person we will be When choosing whether to start a family or deciding on a career we often think we can assess the options by imagining what different experiences would be like for us L A Paul argues that for choices involving dramatically new experiences we are confronted by the brute fact that we can know very little about our subjective futures This has serious implications for our decisions If we make life choices in the way we naturally and intuitively want to by considering what we care about and what our future selves will be like if we choose to have the experience we only learn what we really need to know after we have already committed ourselves If we try to escape the dilemma by avoiding an experience we have still made a choice Choosing rationally then may require us to regard big life decisions as choices to make discoveries small and large about the intrinsic nature of experience and to recognize that part of the value of living authentically is to experience one s life and preferences

in whatever way they may evolve in the wake of the choices you make Using classic philosophical examples about the nature of consciousness and drawing on recent work in normative decision theory cognitive science epistemology and the philosophy of mind Paul develops a rigorous account of transformative experience that sheds light on how we should understand real world experience and our capacity to rationally map our subjective futures Socio-Cultural Insights of Childbirth in South Asia Sabitra Kaphle,2021-07-29 This book analyses the significant socio cultural factors impacting childbirth experiences of women living in remote and complex social settings This book challenges the notion that childbirth is a universal biological event which women experience in their reproductive lives and provides an in depth social perspective of understanding childbirth Drawing on evocative stories of women living in the Himalayas the author discusses how childbirth should be supported to enable women to take control and ownership of their experiences Based on extensive research undertaken in remote mountain regions of Nepal the book provides evidence for and discussion of childbirth in the context of other countries cultures and communities Utilising a feminist perspective this book critiques medical control of childbirth and argues in favour of giving power to women so that they can make decisions which are right for them In doing so the author unpacks complexities associated with women s lives in remote communities and highlights the significance of addressing broader determinants impacting birth outcomes and valuing childbirth traditions to ensure cultural safety for women families and societies Through exploring the wide range of factors influencing women and their childbirth experiences this book offers a new model for childbirth that policy makers practitioners communities educators researchers and other professionals can use to make childbirth an empowering experience for women It will be of interest to academics and professionals in the fields of public health midwifery health promotion sociology and South Asian Studies *Childbirth in a Technocratic Age , Birth (Revised Edition)* Catherine Price,Sandra Robinson,2010-02-01 Fully revised with up to the minute information the bestselling and comprehensive Australian bible for expectant parents Birth provides practical up to date accurate and research based information on everything relating to preconception pregnancy childbirth and early parenting Co written by a midwife and a childbirth educator with over 35 years collective experience in working closely with women and their families this invaluable resource is an essential for every prospective parent Birth The essential guide to conceiving nurturing and giving birth to your baby is reader friendly reassuring unbiased and accessible to a wide readership It presents medical treatments and natural therapies the many physical changes of pregnancy labour and birth and possible variations from the norm
