The Heavens Might Crack Jason Sokol, 2018-03-20 A vivid portrait of how Americans grappled with King's death and legacy in the days, weeks, and months after his assassination. On April 4, 1968, Martin Luther King Jr. was fatally shot as he stood on the balcony of the Lorraine Motel in Memphis. At the time of his murder, King was a polarizing figure: scorned by many white Americans, worshipped by some African Americans and liberal whites, and deemed irrelevant by many black youth. In *The Heavens Might Crack*, historian Jason Sokol traces the diverse responses both in America and throughout the world to King's death. Whether celebrating or mourning, most agreed that the final flicker of hope for a multiracial America had been extinguished. A deeply moving account of a country coming to terms with an act of shocking violence, *The Heavens Might Crack* is essential reading for anyone seeking to understand America's fraught racial past and present.

Build Your Own Blockchain Daniel Hellwig, Goran Karlic, Arnd Huchzermeier, 2020-05-02 This book provides a comprehensive introduction to blockchain and distributed ledger technology. Intended as an applied guide for hands-on practitioners, the book includes detailed examples and in-depth explanations of how to build and run a blockchain from scratch. Through its conceptual background and hands-on exercises, this book allows students, teachers, and crypto enthusiasts to launch their first blockchain while assuming prior knowledge of the underlying technology. How do I build a blockchain? How do I mint a cryptocurrency? How do I write a smart contract? How do I launch an initial coin offering (ICO)? These are some of the questions this book answers. Starting by outlining the beginnings and development of early cryptocurrencies, it provides the conceptual foundations required to engineer secure software that interacts with both public and private ledgers. The topics covered include consensus algorithms, mining, and decentralization, among many more. This is a one-of-a-kind book on blockchain technology. The authors achieved the perfect balance between the breadth of topics and the depth of technical discussion. But the real gem is the set of carefully curated hands-on exercises that guide the reader through the process of building a blockchain right from Chapter 1. Volodymyr Babich, Professor of Operations and Information Management, McDonough School of Business, Georgetown University. An excellent introduction of DLT technology for a non-technical audience. The book is replete with examples and exercises which greatly facilitate the learning of the underlying processes of blockchain technology for all, from students to entrepreneurs. Serguei Netessine, Dhirubhai Ambani Professor of Innovation and Entrepreneurship, The Wharton School, University of Pennsylvania. Whether you want to start from scratch or deepen your blockchain knowledge about the latest developments, this book is an essential reference. Through clear explanations and practical code examples, the authors take you on a progressive journey to discover the technology foundations and build your own blockchain. From an operations perspective, you can learn the principles behind the distributed ledger technology relevant for transitioning towards blockchain-enabled supply chains. Reading this book, you'll get inspired, be able to assess the applicability of blockchain to supply chain operations, and learn from best practices recognized in real-world examples. Ralf W. Seifert, Professor of

Technology and Operations Management at EPFL and Professor of Operations Management at IMD *Neural Systems: Analysis and Modeling* Frank H. Eeckman, 2012-12-06 In recent years there has been tremendous activity in computational neuroscience resulting from two parallel developments On the one hand our knowledge of real nervous systems has increased dramatically over the years on the other there is now enough computing power available to perform realistic simulations of actual neural circuits This is leading to a revolution in quantitative neuroscience which is attracting a growing number of scientists from non biological disciplines These scientists bring with them expertise in signal processing information theory and dynamical systems theory that has helped transform our ways of approaching neural systems New developments in experimental techniques have enabled biologists to gather the data necessary to test these new theories While we do not yet understand how the brain sees hears or smells we do have testable models of specific components of visual auditory and olfactory processing Some of these models have been applied to help construct artificial vision and hearing systems Similarly our understanding of motor control has grown to the point where it has become a useful guide in the development of artificial robots Many neuroscientists believe that we have only scratched the surface and that a more complete understanding of biological information processing is likely to lead to technologies whose impact will propel another industrial revolution *Neural Systems Analysis and Modeling* contains the collected papers of the 1991 Conference on Analysis and Modeling of Neural Systems AMNS and the papers presented at the satellite symposium on compartmental modeling held July 23 26 1992 in San Francisco California The papers included present an update of the most recent developments in quantitative analysis and modeling techniques for the study of neural systems **Publication** , 1993
