New Light On Dark Stars Red Dwarfs Lowmass Stars Brown Dwarfs:

New Light on Dark Stars Neill I. Reid, Suzanne L. Hawley, 2013-11-27 Perhaps the most common question that a child asks when he or she sees the night sky from a dark site for the first time is How many stars are there This happens to be a question which has exercised the intellectual skills of many astronomers over the course of most of the last century including for the last two decades one of the authors of this text Until recently the most accurate answer was We are not certain but there is a good chance that almost all of them are M dwarfs Within the last three years results from new sky surveys particularly the first deep surveys at near infrared wavelengths have provided a breakthrough in this subject solidifying our census of the lowest mass stars and identifying large numbers of the hitherto almost mythical substellar mass brown dwarfs These extremely low luminosity objects are the central subjects of this book and the subtitle should be interpreted accordingly The expression low mass stars carries a wide range of meanings in the astronomical literature but is most frequently taken to refer to objects with masses comparable with that of the Sun F and G dwarfs and their red giant descendants While this definition is eminently reasonable for the average extragalactic astronomer our discussion centres on M dwarfs with masses of no more than 60% that of the Sun and extends to failed stars objects with insufficient mass to ignite central hydrogen fusion

New Light on Dark Stars Neil Reid, Suzanne Hawley, 2009-09-02 There has been very considerable progress in research into low mass stars brown dwarfs and extrasolar planets during the past few years particularly since the first edition of this book was published in 2000 In this new edition the authors present a comprehensive review of both the astrophysical nature of individual red dwarf and brown dwarf stars and their collective statistical properties as an important Galactic stellar population Chapters dealing with the observational properties of low mass dwarfs the stellar mass function and extrasolar planets have been completely revised Other chapters have been significantly revised and updated as appropriate including important new material on observational techniques stellar activity the Galactic halo and field star surveys The authors detail the many discoveries of new brown dwarfs and extrasolar planets made since publication of the first edition of the book and provide a state of the art review of our current knowledge of very low mass stars brown dwarfs and extrasolar planets including both the latest observational results and theoretical work

New Light on Dark Stars I. Neill Reid, Suzanne L. Hawley, 2000 Perhaps the most common question that a child asks when he or she sees the night sky from a dark site for the first time is How many stars are there This happens to be a question which has exercised the intellectual skills of many astronomers over the course of most of the last century including for the last two decades one of the authors of this text Until recently the most accurate answer was We are not certain but there is a good chance that almost all of them are M dwarfs Within the last three years results from new sky surveys particularly the first deep surveys at near infrared wavelengths have provided a breakthrough in this subject solidifying our census of the lowest mass stars and identifying large numbers of the hitherto almost mythical substellar mass brown dwarfs These extremely low

luminosity objects are the central subjects of this book and the subtitle should be interpreted accordingly The expression low mass stars carries a wide range of meanings in the astronomical literature but is most frequently taken to refer to objects with masses comparable with that of the Sun F and G dwarfs and their red giant descendants While this definition is eminently reasonable for the average extragalactic astronomer our discussion centres on M dwarfs with masses of no more than 60% that of the Sun and extends to failed stars objects with insufficient mass to ignite central hydrogen fusion **Very Low-Mass Stars and Brown Dwarfs** Rafael Rebolo, Maria Rosa Zapatero-Osorio, 2000-11-27 This volume provides a state of the art review of our current knowledge of brown dwarfs and very low mass stars The hunt for and study of these elusive objects is currently one of the most dynamic areas of research in astronomy for two reasons Brown dwarfs bridge the gap between stars and planets and they may constitute an important part of the dark matter of the Universe This volume presents review articles from a team of international authorities who gathered at a conference in La Palma to assess the spectacular progress that has been made in this field in the last few years **New Light on Dark Stars** Neill I. Reid, Suzanne L. Hawley, 2014-09-01 *Pure-bred Dogs, American Kennel Gazette*, 1972 **New Light on Dark Stars** Reid, 2000-01-01

50 Years of Brown Dwarfs Viki Joergens, 2013-11-27 The years 2012 2013 mark the 50th anniversary of the theoretical prediction that Brown Dwarfs i e degenerate objects which are just not massive enough to sustain stable hydrogen fusion exist Some 20 years after their discovery how Brown Dwarfs form is still one of the main open questions in the theory of star formation In this volume the pioneers of Brown Dwarf research review the history of the theoretical prediction and the subsequent discovery of Brown Dwarfs After an introduction written by Viki Joergens reviewing Shiv Kumar s theoretical prediction of the existence of brown dwarfs Takenori Nakano reviews his and Hayashi s calculation of the Hydrogen Burning Minimum Mass Both predictions happened in the early 1960s Jill Tarter then writes on the introduction of the term Brown Dwarf before Ben Oppenheimer Rafael Rebolo and Gibor Basri describe their first discovery of Brown Dwarfs in the 1990s Lastly Michael Cushing and Isabelle Baraffe describe the development of the field to the current state of the art While the book is mainly aimed at the Brown Dwarf research community the description of the pioneering period in a scientific field will attract general readers interested in astronomy as well **Ultracool Dwarfs** Hugh R.A. Jones, Iain A. Steele, 2001-09-11 Once you have looked at the night sky on a moonless night it is not hard to realise why so much of our science and religion has its roots in the stars Yet it took until 1850 to realise that fainter stars were not necessarily further away nor the brighter ones closer In fact within the magnitude range observable to the naked eye it is probable that the brighter star is in fact further away Even today the measurement of stellar distances is relatively difficult and is gener ally only done using dedicated telescopes In the early years of the 20th century Hertzsprung and Russell developed a powerful classification diagram which al lows stars to be distinguished using a plot of their colour versus magnitude The construction of this diagram involved the use of spectroscopy which has become the cornerstone of modern astronomy As telescopes become

more powerful detectors more sensitive and more physics is added to astrophysics astronomical spectroscopy becomes a more powerful tool The concern of this book is the spectral classification of stars With a single spectrum of a star it is possible to uniquely classify an object and find its place on the Hertzsprung Russell diagram This spectrum is thus equivalent to having the colour and the magnitude of the object which can in turn be related to mass and other quantities **An**
