A Nutcracker in a Tree Riana Duncan, 1981-03 **Twelve Trees** Daniel Lewis, 2025-03-11 A compelling global exploration of nature and survival as seen via a dozen species of trees that represent the challenges facing our planet and the ways that scientists are working urgently to save our forests and our future The world today is undergoing the most rapid environmental transformation in human history from climate change to deforestation Scientists ethnobotanists indigenous peoples and collectives of all kinds are closely studying trees and their biology to understand how and why trees function individually and collectively in the ways they do In *Twelve Trees* Daniel Lewis curator and historian at one of the world's most renowned research libraries travels the world to learn about these trees in their habitats Lewis takes us on a sweeping journey to plant breeding labs botanical gardens research facilities deep inside museum collections to the tops of tall trees underwater and around the Earth journeying into the deserts of the American west and the deep jungles of Peru to offer a globe spanning perspective on the crucial impact trees have on our entire planet When a once common tree goes extinct in the wild but survives in a botanical garden what happens next How can scientists reconstruct lost genomes and habitats How does a tree store thousands of gallons of water or offer up perfectly preserved insects from millions of years ago or root itself in muddy swamps and remain standing How does a 5 000 year old tree manage to live and what can we learn from it And how can science account for the survival of one species at the expense of others To study the science of trees is to study not just the present but the story of the world its past and its future Note species include The Lost Tree of Easter Island *Sophora toromiro* The coast redwood *Sequoia sempervirens* *Hymenaea protera* a fossil tree The Longleaf pine *Pinus palustris* East Indian sandalwood *Santalum album* The Bristlecone pine *Pinus longaeva* West African ebony *Diospyros crassiflora* The Tasmanian blue gum eucalyptus *Eucalyptus globulus* Olive tree *Olea europaea* Baobab *Adansonia digitata* the kapok tree *Ceiba pentandra* The bald cypress *Taxodium distichum*

Tarbert, 1983-05 *Trees in Trouble* Daniel Mathews, 2021-04-27 A troubling story of the devastating and compounding effects of climate change in the Western and Rocky Mountain states told through in depth reportage and conversations with ecologists professional forest managers park service scientists burn boss activists and more Climate

change manifests in many ways across North America but few as dramatic as the attacks on our western pine forests In *Trees in Trouble* Daniel Mathews tells the urgent story of this loss accompanying burn crews and forest ecologists as they study the myriad risk factors and refine techniques for saving this important limited resource Mathews transports the reader from the exquisitely aromatic haze of ponderosa and Jeffrey pine groves to the fantastic gnarls and whorls of five thousand year old bristlecone pines from genetic test nurseries where white pine seedlings are deliberately infected with their mortal enemy to the hottest megafire sites and neighborhoods leveled by fire tornadoes or ember blizzards Scrupulously researched *Trees in Trouble* not only explores the devastating ripple effects of climate change but also introduces us to the people devoting their lives to saving our forests Mathews also offers hope a new approach to managing western pine forests is underway *Trees in Trouble* explores how we might succeed in sustaining our forests through the challenging transition to a new environment

Tomback, Stephen F. Arno, Robert E. Keane, 2001 Whitebark pine is a dominant feature of western high mountain regions offering an important source of food and high quality habitat for species ranging from Clark's nutcracker to the grizzly bear But in the northwestern United States and southwestern Canada much of the whitebark pine is disappearing Why is a high mountain species found in places rarely disturbed by humans in trouble And what can be done about it *Whitebark Pine Communities* addresses those questions explaining how a combination of altered fire regimes and fungal infestation is leading to a rapid decline of this once abundant and ecologically vital species Leading experts in the field explain what is known about whitebark pine communities and their ecological value examine its precarious situation and present the state of knowledge concerning restoration alternatives The book presents an overview of the ecology and status of whitebark pine communities offers a basic understanding of whitebark pine taxonomy distribution and ecology including environmental tolerances community disturbance processes regeneration processes species interactions and genetic population structure identifies the threats to whitebark pine communities explains the need for management intervention surveys the extent of impact and losses to date More importantly the book clearly shows that the knowledge and management tools are available to restore whitebark pine communities both locally and on a significant scale regionally and it provides specific information about what actions can and must be taken *Whitebark Pine Communities* offers a detailed portrait of the ecology of whitebark pine communities and the current threats to them It brings together leading experts to provide in depth information on research needs management approaches and restoration activities and will be essential reading for ecologists land managers and anyone concerned with the health of forest ecosystems in the western United States **Empire of the Beetle** Andrew Nikiforuk, 2011 Beginning in the late 1980s a series of improbable bark beetle outbreaks unsettled iconic

forests and communities across western North America An insect the size of a rice kernel eventually killed more than 30 billion pine and spruce trees from Alaska to New Mexico Often appearing in masses larger than schools of killer whales the beetles engineered one of the world s greatest forest die offs since the deforestation of Europe by peasants between the eleventh and thirteenth centuries The beetle didn t act alone Misguided science out of control logging bad public policy and a hundred years of fire suppression created a volatile geography that released the world s oldest forest manager from all natural constraints Like most human empires the beetles exploded wildly and then crashed leaving in their wake grieving landowners humbled scientists hungry animals and altered watersheds Although climate change triggered this complex event human arrogance assuredly set the table With little warning an ancient insect pointedly exposed the frailty of seemingly stable manmade landscapes And despite the billions of public dollars spent on control efforts the beetles burn away like a fire that can t be put out Drawing on first hand accounts from entomologists botanists foresters and rural residents award winning journalist Andrew Nikiforuk investigates this unprecedented beetle plague its startling implications and the lessons it holds
