Rational Points Seminar Bonn Wuppertal 1983/84 Aspects Of Mathematics:

Rational Points Gerd Faltings, Gisbert Wüstholz, 2012-12-06 This book consists of the notes from the seminar Bonn Wuppertal 1983/84 on Arithmetic Geometry. It contains a proof for the Mordell conjecture and may be useful as an introduction to Arakelov's point of view in diophantine geometry. The third edition includes an appendix in which a detailed survey on the spectacular recent developments in arithmetic algebraic geometry is given. These beautiful new results have their roots in the material covered by this book.

Rational Points Gerd Faltings, Gisbert Wüstholz, 1986-01-01

Heights in Diophantine Geometry Enrico Bombieri, Walter Gubler, 2006 This monograph is a bridge between the classical theory and modern approach via arithmetic geometry.

Arakelov Geometry and Diophantine Applications Emmanuel Peyre, Gaël Rémond, 2021-03-10 Bridging the gap between novice and expert the aim of this book is to present in a self contained way a number of striking examples of current diophantine problems to which Arakelov geometry has been or may be applied. Arakelov geometry can be seen as a link between algebraic geometry and diophantine geometry. Based on lectures from a summer school for graduate students this volume consists of 12 different chapters each written by a different author. The first chapters provide some background and introduction to the subject. These are followed by a presentation of different applications to arithmetic geometry. The final part describes the recent application of Arakelov geometry to Shimura varieties and the proof of an averaged version of Colmez's conjecture. This book thus blends initiation to fundamental tools of Arakelov geometry with original material corresponding to current research. This book will be particularly useful for graduate students and researchers interested in the connections between algebraic geometry and number theory. The prerequisites are some knowledge of number theory and algebraic geometry.

Effective Results and Methods for Diophantine Equations over Finitely Generated Domains Jan-Hendrik Evertse, Kâalmâan Gyèory, 2022-04-28 Provides exceptional coverage of effective solutions for Diophantine equations over finitely generated domains.

Periods of Hecke Characters Norbert Schappacher, 2006-11-14 The starting point of this Lecture Notes volume is Deligne's theorem about absolute Hodge cycles on abelian varieties. Its applications to the theory of motives with complex multiplication are systematically reviewed. In particular algebraic relations between values of the gamma function the so called formula of Chowla and Selberg and its generalization and Shimura's monomial relations among periods of CM abelian varieties are all presented in a unified way namely as the analytic reflections of arithmetic identities between Hecke characters with gamma values corresponding to Jacobi sums. The last chapter contains a special case in which Deligne's theorem does not apply.

Physics Heinz Dietrich Doebner, Jörg Dieter Hennig, Tchavdar D. Palev, 1988 The aim of this well known annual colloquium on group theoretical and geometrical methods in physics is to give an overview of current research Original contributions along with some review articles cover relevant mathematical developments as well as applications to physical phenomena The volume contains contributions dealing with concepts from classical group theory supergroups superalgebras infinite dimensional groups Kac Moody algebras and related structures Applications to physics include quantization methods nuclear physics crystallography gauge theory and strings in particle physics Most of the articles have an introductory or a review section so the volume will be useful not only for researchers but also for graduate students *Arithmetic Geometry* G. Cornell, J. H. Silverman, 2012-12-06 This volume is the result of a mainly instructional conference on arithmetic geometry held from July 30 through August 10 1984 at the University of Connecticut in Storrs This volume contains expanded versions of almost all the instructional lectures given during the conference In addition to these expository lectures this volume contains a translation into English of Faltings seminal paper which provided the inspiration for the conference We thank Professor Faltings for his permission to publish the translation and Edward Shipz who did the translation We thank all the people who spoke at the Storrs conference both for helping to make it a successful meeting and enabling us to publish this volume We would especially like to thank David Rohrlich who delivered the lectures on height functions Chapter VI when the second editor was unavoidably detained In addition to the editors Michael Artin and John Tate served on the organizing committee for the conference and much of the success of the conference was due to them our thanks go to them for their assistance Finally the conference was only made possible through generous grants from the Vaughn Foundation and the National Science Foundation Diophantine Approximation and Abelian Varieties Bas Edixhoven, Jan-Hendrik Evertse, 2009-02-05 The 13 chapters of this book centre around the proof of Theorem 1 of Faltings paper Diophantine approximation on abelian varieties Ann Math 133 1991 and together give an approach to the proof that is accessible to Ph D level students in number theory and algebraic geometry Each chapter is based on an instructional lecture given by its author at a special conference
