Concrete Semantics Tobias Nipkow, Gerwin Klein, 2014-12-03 Part I of this book is a practical introduction to working with the Isabelle proof assistant It teaches you how to write functional programs and inductive definitions and how to prove properties about them in Isabelle's structured proof language Part II is an introduction to the semantics of imperative languages with an emphasis on applications like compilers and program analysers The distinguishing feature is that all the mathematics has been formalised in Isabelle and much of it is executable Part I focusses on the details of proofs in Isabelle Part II can be read even without familiarity with Isabelle's proof language all proofs are described in detail but informally The book teaches the reader the art of precise logical reasoning and the practical use of a proof assistant as a surgical tool for formal proofs about computer science artefacts In this sense it represents a formal approach to computer science not just semantics The Isabelle formalisation including the proofs and accompanying slides are freely available online and the book is suitable for graduate students advanced undergraduate students and researchers in theoretical computer science and logic

Parity games, separations, and the modal μ -calculus Dittmann, Christoph, 2017-03-08

The topics of this thesis are the modal calculus and parity games. The modal calculus is a common logic for model checking in computer science. The model checking problem of the modal calculus is polynomial time equivalent to solving parity games, a 2 player game on labeled directed graphs. We present the first FPT algorithms fixed parameter tractable for the model checking problem of the modal calculus on restricted classes of graphs specifically on classes of bounded Kelly width or bounded DAG width. In this process we also prove a general decomposition theorem for the modal calculus and define a useful notion of type for this logic. Then assuming a class of parity games has a polynomial time algorithm solving it we consider the problem of extending this algorithm to larger classes of parity games. In particular we show that joining games pasting games or adding single vertices preserves polynomial time solvability. It follows that parity games can be solved in polynomial time if their underlying undirected graph is a tournament, a complete bipartite graph or a block graph. In the last chapter we present the first non trivial formal proof about parity games. We explain a formal proof of positional determinacy of parity games in the proof assistant Isabelle HOL.

Die Themen dieser Dissertation sind der modale Kalkül und Paritätsspiele. Der modale Kalkül ist eine häufig eingesetzte Logik im Bereich des Model Checkings in der Informatik. Das Model Checking Problem des modalen Kalküls ist polynomialzeit äquivalent zum Lösen von Paritätsspielen, einem 2 Spielerspiel auf beschrifteten gerichteten Graphen. Wir präsentieren die ersten FPT Algorithmen fixed parameter tractable für das Model Checking Problem des modalen Kalküls auf Klassen von Graphen mit beschränkter Kelly Weite oder beschränkter DAG Weite. Für diesen Zweck beweisen wir einen allgemeineren Zerlegungssatz für den modalen Kalkül und stellen eine nützliche Definition von Typen für diese Logik vor. Angenommen eine Klasse von Paritätsspielen hat einen Polynomialzeit Lösealgorithmus betrachten wir danach das Problem diese Klassen zu erweitern auf eine Weise sodass Polynomialzeit Lösbarkeit erhalten bleibt. Wir zeigen dass dies beim Join von Paritätsspielen beim Pasting und beim Hinzufügen einzelner Knoten der Fall ist. Wir folgern daraus dass das Lösen von Paritätsspielen in Polynomialzeit möglich ist falls der unterliegende ungerichtete Graph ein Tournament, ein vollständiger bipartiter Graph oder ein Blockgraph ist. Im letzten Kapitel präsentieren wir den ersten nicht trivialen formalen Beweis über Paritätsspiele. Wir stellen einen formalen Beweis für die positionale Determiniertheit von Paritätsspielen im Beweis Assistenten Isabelle HOL vor.

Excerpts from his twenty books are framed by editorial retrospect then linked by Stewart's own commentary on the variety and underlying vectors of his interpretive career across aesthetic forms from Victorian narrative to recent American fiction classic celluloid cinema to postfilmic digital effects inert book sculpture and literary wordplay to the soundscape of singing on screen. Accompanied by a glossary of his many influential coinages this cornucopia of analyses is also a chronicle of evolving paradigms in the work of intensive reading.

Daughter of Heaven Leslie Li, 2011-12-03 In this powerful touching memoir of a critically acclaimed Chinese American writer taste becomes the keeper of memory and food the keeper of culture when Nai nai her extraordinary grandmother arrives from mainland China. Leslie Li's paternal grandfather Li Zogren was China's first democratically elected vice president to whom Chiang Kai-shek left control of the country when he fled to Formosa in 1949. Nine years later Li's wife Nai nai comes to live with her son's family in New York City bringing a whole new world of sights smells and tastes as she quickly takes control of the kitchen. Nai nai's tantalizingly exotic cooking opens up the heart and mind of her American granddaughter to her Chinese heritage and to the world. Through her grandmother's traditional cuisine Leslie bridges the cultural divide in an America in which she is a minority as well as the growing gap at home between her rigid traditional Chinese father and her progressive American born mother. Interspersed throughout her intimate and moving memoir are the author's personal recipes most from Nai nai's kitchen that add a delicious dimension to the work. A loving ode to family and food *Daughter of Heaven* is an exquisite blend of memory history and the senses. *Conference Record of the Nineteenth*
