Reaching For The High Frontier:

To Reach the High Frontier Roger D. Launius, Dennis R. Jenkins, 2014-07-11 Access no single word better describes the primary concern of the exploration and development of space Every participant in space activities civil military scientific or commercial needs affordable reliable frequent and flexible access to space To Reach the High Frontier details the histories of the various space access vehicles developed in the United States since the birth of the space age in 1957 Each case study has been written by a specialist knowledgeable about the vehicle described and places each system in the larger context of the history of spaceflight The technical challenge of reaching space with chemical rockets the high costs associated with space launch the long lead times necessary for scheduling flights and the poor reliability of the rockets themselves show launch vehicles to be the space program s most difficult challenge

The Politics of Space Eligar Sadeh, 2010-11 This title provides a concise guide to the way in which politics and space exploration interact

The Development of Outer Space Thomas Gangale, 2009-07-23 This account of the evolution of outer space law examines key issues that fuel the debates over sovereignty and property rights designed to govern the future colonization and use of heavenly bodies other than our own In the United States lobbies for the commercial development of space have become increasingly antagonistic toward the international legal regime of outer space condemning the 1967 Outer Space Treaty and the unratified 1979 Moon Agreement as anti business The Development of Outer Space Sovereignty and Property Rights in International Space Law argues that the res communis principle enshrined in the Outer Space Treaty was misrepresented here with essential help from corporate lobbyists whose real object was the defeat of the Law of the Sea Convention Thomas Gangale builds the legal case for reviving the moribund Moon Agreement as a prelude to negotiating a second Moon treaty to establish a regulatory regime for the exploitation of extraterrestrial resources The author s account of the inception and evolution of outer space law to date is deeply informed by his appreciation of such terrestrial considerations as the nation state system the contending economic theories of capitalism and communism and the post colonial struggle between the developed space faring nations and the developing earthbound nations

Scramble for the Skies Namrata Goswami, Peter A. Garretson, 2020-10-06 With a focus on China the United States and India this book examines the economic ambitions of the second space race The authors argue that space ambitions are informed by a combination of factors including available resources capability elite preferences and talent pool The authors demonstrate how these influences affect the development of national space programs as well as policy and law

SPACE & AMERN IMAGINATION Howard E. McCurdy, 1997-10-17 Examining popular images that have helped motivate the most ambitious civil space program in the world McCurdy argues that the spacefaring dream tapped into several of America s most deeply rooted cultural ideals He also explains how space advocates playing on the public s Cold War fears convinced politicians that control of space meant control of the earth He also contends that the gaps between expectations and reality led to public policy obligated to entertain as well as inform 43 photos

The Rise of the

Commercial Space Industry Brian C. Odom, 2024-09-13 This collection explores the evolution of the commercial space industry from the beginning of the space age through the early twenty first century Today the space industry is taking on an increased leadership and innovation role in both space access and exploration The growth of commercial space over the past decades offers a potential new paradigm for space exploration one in which industry transitions from supplier to partner However many questions remain This book seeks to bring to light these questions which span from the most seemingly consequential how will humanity explore the Moon and Mars to the most basic what is commercial space To further develop the historical context of commercial space and thereby better inform decision making at NASA in the future this volume examines a broad range of questions related to the history of commercial space operations including but not limited to how has the concept of commercial space evolved in different fields and disciplines What have been the major events and milestones in the emergence and evolution of commercial space activities in the USA and internationally How has the US Government assisted or impeded the emergence and evolution of commercial space activities Providing contributions from a range of different disciplines and backgrounds the authors of this volume offer valuable insights for scholars researching the history of space and space policy as well as decision makers working at NASA or within the wider space industry Limiting Outer Space Alexander C.T. Geppert, 2018-04-18 Limiting Outer Space propels the historicization of outer space by focusing on the Post Apollo period After the moon landings disillusionment set in Outer space no longer considered the inevitable destination of human expansion lost much of its popular appeal cultural significance and political urgency With the rapid waning of the worldwide Apollo frenzy the optimism of the Space Age gave way to an era of space fatigue and planetized limits Bringing together the history of European astroculture and American Soviet spaceflight with scholarship on the 1970s this cutting edge volume examines the reconfiguration of space imaginaries from a multiplicity of disciplinary perspectives Rather than invoking oft repeated narratives of Cold War rivalry and an escalating Space Race Limiting Outer Space breaks new ground by exploring a hitherto underrated and understudied decade the Post Apollo period *The Visioneers* W. Patrick McCray, 2017-06-06 The story of the visionary scientists who invented the future In 1969 Princeton physicist Gerard O'Neill began looking outward to space colonies as the new frontier for humanity's expansion A decade later Eric Drexler an MIT trained engineer turned his attention to the molecular world as the place where society's future needs could be met using self replicating nanoscale machines These modern utopians predicted that their technologies could transform society as humans mastered the ability to create new worlds undertook atomic scale engineering and if truly successful overcame their own biological limits The Visioneers tells the story of how these scientists and the communities they fostered imagined designed and popularized speculative technologies such as space colonies and nanotechnologies Patrick McCray traces how these visioneers blended countercultural ideals with hard science entrepreneurship libertarianism and unbridled optimism about the future He shows how they built networks that communicated their ideas to writers politicians and corporate

leaders But the visioners were not immune to failure or to the lures of profit celebrity and hype O Neill and Drexler faced difficulty funding their work and overcoming colleagues skepticism and saw their ideas co opted and transformed by Timothy Leary the scriptwriters of Star Trek and many others Ultimately both men struggled to overcome stigma and ostracism as they tried to unshackle their visioning from pejorative labels like fringe and pseudoscience The Visioners provides a balanced look at the successes and pitfalls they encountered The book exposes the dangers of promotion oversimplification misuse and misunderstanding that can plague exploratory science But above all it highlights the importance of radical new ideas that inspire us to support cutting edge research into tomorrow s technologies Frontiers for the American Century

James Spiller,2016-04-29 This book compares the cultural politics of the U S space and Antarctic programs during the Cold War It analyzes how culturally salient terms especially the nationalist motif of the frontier were used to garner public support for these strategic initiatives and more generally United States internationalism during this period **Bringing the Future**

Within Reach Robert S. Arrighi,2016 The book documents Glenn s many research specialties over those 75 years Among them are early jet engines and rockets flight safety and fuel efficiency tested in premier icing and wind tunnels liquid hydrogen fuel which despite skeptics like aerospace engineer Wernher von Braun helped the U S win the race to the moon and electric propulsion considered key to future space flight Space enthusiasts aviation personnel aerospace engineers and inventors may be interested in this comprehensive and milestone volume Other related products NASA at 50 Interviews With NASA s Senior Leadership can be found here <https://bookstore.gpo.gov/products/sku/033000013604> Other products published by National Aeronautical and Space Administration NASA can be found here <https://bookstore.gpo.gov/agency/550>

Groovy Science David Kaiser,W. Patrick McCray,2016-05-31 Groovy Science paints a decidedly different picture of the sixties counterculture by uncovering an unabashed embrace of certain kinds of science and technology While many rejected science and technology that struck them as hulking depersonalized or militarized theirs was a rejection of Cold War era missiles and mainframes not science and technology per se We see in these pages the long running annual workshops on quantum physics at the Esalen Institute in Big Sur California aerospace engineers turning their knowledge of high tech materials to the short board revolution in surfing Timothy Leary s championing of space colonization as the ultimate high and midwives redirecting their medical knowledge to launch a home birth movement Groovy Science gathers intriguing examples like these from across the physical biological and social sciences and charts commonalities across these many domains highlighting shared trends and themes during one of the most colorful periods of recent American history The result reveals a much more diverse picture of how Americans sought and found alternative forms of science that resonated with their social and political goals **The Dragon Extends its Reach** Larry M. Wortzel,2013-06-15 China has evolved from a nation with local and regional security interests to a major economic and political power with global interests investments and political commitments It now requires a military that can project itself around the globe albeit on a limited scale to secure its interests

Therefore as Larry M Wortzel explains the Chinese Communist Party leadership has charged the People's Liberation Army PLA with new and challenging missions that require global capabilities. Advances in technology and the development of indigenous weapons platforms in China combined with reactions to modern conflicts have produced a military force very different from that which China has fielded in the past. Wortzel presents a clear and sobering picture of the PLA's modernization effort as it expands into space and cyberspace and as it integrates operations in the traditional domains of war. This book will appeal to the specialist in security and foreign policy issues in Asia as well as to the person interested in arms control, future warfare and global military strategies. The book puts China's military growth into historical context for readers of recent military and diplomatic history. *A History of the Kennedy Space Center* Kenneth Lipartito, Orville R Butler, 2007-08-12 This first comprehensive history of the Kennedy Space Center, NASA's famous launch facility located at Cape Canaveral, Florida, reveals the vital but largely unknown work that takes place before the rocket is lit. Though the famous Vehicle Assembly Building and launch pads dominate the flat Florida landscape at Cape Canaveral and attract 1.5 million people each year to its visitor complex, few members of the public are privy to what goes on there beyond the final outcome of the flaring rocket as it lifts into space. With unprecedented access to a wide variety of sources including the KSC archives, other NASA centers, the National Archives, and individual and group interviews and collections, Lipartito and Butler explore how the methods and technology for preparing, testing, and launching spacecraft have evolved over the last 45 years. Their story includes the Mercury and Gemini missions, the Apollo lunar program, the Space Shuttle scientific missions, and robotic spacecraft and the International Space Station, as well as the tragic accidents of Challenger and Columbia. Throughout, the authors reveal the unique culture of the people who work at KSC and make Kennedy distinct from other parts of NASA. As Lipartito and Butler show, big NASA projects, notably the Space Shuttle and the International Space Station, had much to learn on the ground before they made it to space. Long before a spacecraft started its ascent, crucial work had been done: work that combined the muscular and mundane with the high tech, and applied the vital skills and knowledge of the men and women of KSC to the design of vehicles and missions. The authors challenge notions that successful innovation was simply the result of good design alone and argue that with large technical systems, real-world experience actually made the difference between bold projects that failed and innovations that stayed within budget and produced consistent results. The authors pay particular attention to operational knowledge developed by KSC, the insights that came from using and operating complex technology. This work makes it abundantly clear that the processes performed by ground operations are absolutely vital to success. *Strategic and theater nuclear forces* United States. Congress. Senate. HUMANITY AMONG THE STARS What happens when we reach out into the vastness of space What hope for us amongst the stars Multi award winning editor Jonathan Strahan brings us fourteen new tales of the future from some of the finest science fiction writers in the field The fourteen startling stories in this anthology feature the work of Greg Egan Aliette de Bodard Ian McDonald Karl Schroeder Pat Cadigan Karen Lord Ellen Klages Adam Roberts Linda Nagata Hannu Rajaniemi Kathleen Ann Goonan Ken MacLeod Alastair Reynolds and Peter Watts *Critical Issues in the History of Spaceflight* Stephen J. Dick, Steven J. Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experiences Amazon
