Porter, 2016-06-03 Progress in Reaction Kinetics discusses the main themes of chemical kinetics It covers such topics as the reactions of halogen atoms and methylenes mercury photosensitized reactions anionic polymerization cis trans isomerisation and protolytic reactions The book provides a good illustration of the quantitative rate studies in biochemical systems The experiments to determine the relative rate constants are shown and analyzed The process of photosensitization involves absorption of light energy by a strongly absorbing substance The methods to identify the reactions of carbonyl compounds organic acids and esters are presented as well as the reactions of alcohols ethers and epoxides The degree of reaction of some haem compounds is explained A chapter of the book focuses on the kinetic treatment of processes that takes place in a series of steps Such procedures are called consecutive processes A sample of these is the rate determining step approximation The book will provide useful information to chemists chemical engineers students and researchers *Point Sources of Pollution: Local Effects and their Control - Volume II* Qian Yi, 2009-08-17 Point Sources of Pollution Local Effects and their Control is a component of Encyclopedia of Environmental and Ecological Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Point sources of pollution are the major causes of degradation of ecosystems and may have significant effects on human health if they are not properly controlled They can be classified in terms of sources the discharged media and the pollutants themselves Broadly speaking the sources include municipal and industrial sector activities and the media include water air and solids Noise is also an important form of pollution Pollutant compositions from point sources can be vast varied and complex and can vary between different countries and regions The Theme discusses matters of great relevance to our world such as Vehicular Emissions Industrial Pollution Domestic Pollution Environmental Pollutants and Their Control Technologies for Air Pollution Control and Technologies for Water Pollution Control These two volumes are aimed at the following five major target audiences University and College students Educators

Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs *Physical Chemistry of Fast Reactions* B. Levitt, 2012-12-06 The chapters in this book are devoted to the elementary reactions of small molecules in the gas phase with some emphasis on reactions important in combustion The first three chapters cover experimental measurements made at high temperatures mainly using shock waves and flames the final chapter describes discharge flow methods near room temperature The authors all active in the fields they describe were asked to aim at a level intermediate between a textbook and a review designed for readers not already familiar with this branch of chemical kinetics We hope the book will prove especially useful to research workers in related subjects to research students and perhaps as source material for the preparation of lectures The examples have been chosen to illustrate the theoretical basis of the topics rather than attempt a complete coverage Professors Wagner and Troe describe the remarkable progress made in recent years in measuring dissociation rates for small molecules Tests of unimolecular reaction theories are usually made in the fall off region of pressure the kinetics change from first order to second order as the pressure is reduced For large molecules this region lies below atmospheric pressure and is relatively easily accessible For molecules with four or less atoms however the fall off region lies well above atmospheric pressure it has been explored using the high pressure shock tube techniques developed by the authors
