Real Submanifolds In Complex Space And Their Mappings:

Real Submanifolds in Complex Space and Their Mappings (PMS-47) M. Salah Baouendi, Peter Ebenfelt, Linda Preiss Rothschild, 2016-06-02 This book presents many of the main developments of the past two decades in the study of real submanifolds in complex space providing crucial background material for researchers and advanced graduate students The techniques in this area borrow from real and complex analysis and partial differential equations as well as from differential algebraic and analytical geometry In turn these latter areas have been enriched over the years by the study of problems in several complex variables addressed here The authors M Salah Baouendi Peter Ebenfelt and Linda Preiss Rothschild include extensive preliminary material to make the book accessible to nonspecialists One of the most important topics that the authors address here is the holomorphic extension of functions and mappings that satisfy the tangential Cauchy Riemann equations on real submanifolds They present the main results in this area with a novel and self contained approach The book also devotes considerable attention to the study of holomorphic mappings between real submanifolds and proves finite determination of such mappings by their jets under some optimal assumptions The authors also give a thorough comparison of the various nondegeneracy conditions for manifolds and mappings and present new geometric interpretations of these conditions Throughout the book Cauchy Riemann vector fields and their orbits play a central role and are presented in a setting that is both general and elementary

Real Methods in Complex and CR Geometry Marco Abate, John Erik Fornaess, Xiaojun Huang, Jean-Pierre Rosay, Alexander Tumanov, 2004-08-30 The geometry of real submanifolds in complex manifolds and the analysis of their mappings belong to the most advanced streams of contemporary Mathematics In this area converge the techniques of various and sophisticated mathematical fields such as P D E s boundary value problems induced equations analytic discs in symplectic spaces complex dynamics For the variety of themes and the surprisingly good interplaying of different research tools these problems attracted the attention of some among the best mathematicians of these latest two decades They also entered as a refined content of an advanced education In this sense the five lectures of this volume provide an excellent cultural background while giving very deep insights of current research activity

Analysis and Geometry in Several Complex Variables Shiferaw Berhanu, Nordine Mir, Emil J. Straube, 2017-01-17 This volume contains the proceedings of the workshop on Analysis and Geometry in Several Complex Variables held from January 4-8 2015 at Texas A M University at Qatar Doha Qatar This volume covers many topics of current interest in several complex variables CR geometry and the related area of overdetermined systems of complex vector fields as well as emerging trends in these areas Papers feature original research on diverse topics such as the rigidity of CR mappings normal forms in CR geometry the $\bar{\partial}$ Neumann operator asymptotic expansion of the Bergman kernel and hypoellipticity of complex vector fields Also included are two survey articles on complex Brunn Minkowski theory and the regularity of systems of complex vector fields and their associated Laplacians

Geometry of Holomorphic Mappings Sergey Pinchuk, Rasul Shafikov, Alexandre

Sukhov,2023-09-14 This monograph explores the problem of boundary regularity and analytic continuation of holomorphic mappings between domains in complex Euclidean spaces Many important methods and techniques in several complex variables have been developed in connection with these questions and the goal of this book is to introduce the reader to some of these approaches and to demonstrate how they can be used in the context of boundary properties of holomorphic maps The authors present substantial results concerning holomorphic mappings in several complex variables with improved and often simplified proofs Emphasis is placed on geometric methods including the Kobayashi metric the Scaling method Segre varieties and the Reflection principle *Geometry of Holomorphic Mappings* will provide a valuable resource for PhD students in complex analysis and complex geometry it will also be of interest to researchers in these areas as a reference

Geometric Analysis of PDE and Several Complex Variables Francois Treves,2005 This volume is dedicated to Francois Treves who made substantial contributions to the geometric side of the theory of partial differential equations PDEs and several complex variables One of his best known contributions reflected in many of the articles here is the study of hypo analytic structures An international group of well known mathematicians contributed to the volume Articles generally reflect the interaction of geometry and analysis that is typical of Treves's work such as the study of the special types of partial differential equations that arise in conjunction with CR manifolds symplectic geometry or special families of vector fields There are many topics in analysis and PDEs covered here unified by their connections to geometry The material is suitable for graduate students and research mathematicians interested in geometric analysis of PDEs and several complex variables

Analysis and Geometry Ali Baklouti,Aziz El Kacimi,Sadok Kallel,Nordine Mir,2015-07-26 This book includes selected papers presented at the MIMS Mediterranean Institute for the Mathematical Sciences GGTM Geometry and Topology Grouping for the Maghreb conference held in memory of Mohammed Salah Baouendi a most renowned figure in the field of several complex variables who passed away in 2011 All research articles were written by leading experts some of whom are prize winners in the fields of complex geometry algebraic geometry and analysis The book offers a valuable resource for all researchers interested in recent developments in analysis and geometry *Geometric Analysis of Several Complex Variables and Related Topics* Y. Barkatou,2011 This volume contains the proceedings of the Workshop on Geometric Analysis of Several Complex Variables and Related Topics which was held from May 10 14 2010 in Marrakesh Morocco The articles in this volume present current research and future trends in the theory of several complex variables and PDE Of note are two survey articles the first presenting recent results on the solvability of complex vector fields with critical points while the second concerns the Lie group structure of the automorphism groups of CR manifolds The other articles feature original research in major topics of analysis dealing with analytic and Gevrey regularity existence of distributional traces the bar partial Neumann operator automorphisms of hypersurfaces holomorphic vector bundles spaces of harmonic forms and Gysin sequences *A Primer on Mapping Class Groups* Benson Farb,Dan Margalit,2012 The study of the mapping class group

$\text{Mod } S$ is a classical topic that is experiencing a renaissance. It lies at the juncture of geometry, topology, and group theory. This book explains as many important theorems, examples, and techniques as possible quickly and directly while at the same time giving full details and keeping the text nearly self-contained. The book is suitable for graduate students.

A Primer on Mapping Class Groups begins by explaining the main group-theoretical properties of $\text{Mod } S$ from finite generation by Dehn twists and low-dimensional homology to the Dehn-Nielsen-Baer theorem. Along the way, central objects and tools are introduced, such as the Birman exact sequence, the complex of curves, the braid group, the symplectic representation, and the Torelli group. The book then introduces Teichmüller space and its geometry and uses the action of $\text{Mod } S$ on it to prove the Nielsen-Thurston classification of surface homeomorphisms. Topics include the topology of the moduli space of Riemann surfaces, the connection with surface bundles, pseudo-Anosov theory, and Thurston's approach to the classification.

Phase Space Analysis of Partial Differential Equations Antonio Bove, Ferruccio Colombini, Daniele Del Santo, 2007-12-28. Covers phase space analysis methods including microlocal analysis and their applications to physics. Treats the linear and nonlinear aspects of the theory of PDEs. Original articles are self-contained with full proofs; survey articles give a quick and direct introduction to selected topics, evolving at a fast pace. Excellent reference and resource for grad students and researchers in PDEs and related fields.

Hermitian Analysis John P. D'Angelo, 2019-05-24. This textbook provides a coherent, integrated look at various topics from undergraduate analysis. It begins with Fourier series, continues with Hilbert spaces, discusses the Fourier transform on the real line, and then turns to the heart of the book: geometric considerations. This chapter includes complex differential forms, geometric inequalities for one and several complex variables, and includes some of the author's original results. The concept of orthogonality weaves the material into a coherent whole. This textbook will be a useful resource for upper undergraduate students who intend to continue with mathematics, graduate students interested in analysis, and researchers interested in some basic aspects of Cauchy-Riemann geometry. The inclusion of several hundred exercises makes this book suitable for a capstone undergraduate Honors class. This second edition contains a significant amount of new material, including a new chapter dedicated to the CR geometry of the unit sphere. This chapter builds upon the first edition by presenting recent results about groups associated with CR sphere maps. From reviews of the first edition: "The present book developed from the teaching experiences of the author in several honors courses. All the topics are motivated very nicely, and there are many exercises which make the book ideal for a first-year graduate course on the subject. The style is concise, always very neat, and proofs are given with full details. Hence I certainly suggest this nice textbook to anyone interested in the subject, even for self-study." Fabio Nicola, Politecnico di Torino. Mathematical Reviews: "D'Angelo has written an eminently readable book, including excellent explanations of pretty nasty stuff, for even the more gifted upper-division players. It certainly succeeds in hooking the present browser. I like this book a great deal." Michael Berg, Loyola Marymount University. Mathematical Association of America.
