Structured Development for Real-Time Systems

Paul T. Ward, 1986-06-04 Real time and embedded systems are in widespread use in the modern world From the microprocessor controller in a camera through smart traffic lights and production control systems to large defense systems computer technology is increasingly a part of systems that control and respond to their environments in real time As the technology has improved we have come to rely on these systems more and more we have even put our lives in their hands Airplanes biomedical accelerators nuclear power plants and the like all depend on real time control to operate safely A failure in a control system such as not responding correctly to faults in the environment could endanger many lives Unfortunately there is a tendency for developers to focus too heavily on the intricacies of the engineering and computer technology to the detriment of understanding the real world problem at hand At best this wastes time and resources and at worst it is dangerous in light of the life critical nature of today's systems This misplaced focus can result at least partly from the lack of a comprehensive set of modeling tools and techniques fitted to the real time development environment This book provides the tools and techniques needed for visualizing and verifying the operation of a real time system prior to construction and demonstrates their usefulness

WHAT IS THIS BOOK ABOUT? In recent times real time computer systems have become increasingly complex and sophisticated It has now become apparent that to implement such schemes effectively professional rigorous software methods must be used This includes analysis design and implementation Unfortunately few textbooks cover this area well Frequently they are hardware oriented with limited coverage of software or software texts which ignore the issues of real time systems This book aims to fill that gap by describing the total software design and is given development process for real time systems Further special emphasis of microprocessor based real time embedded systems to the needs

WHAT ARE REAL TIME COMPUTER SYSTEMS Real time systems are those which must produce correct responses within a definite time limit Should computer responses exceed these time bounds then performance degradation and or malfunction results

WHAT ARE REAL TIME EMBEDDED COMPUTER SYSTEMS Here the computer is merely one functional element within a real time system it is not a computing machine in its own right

WHO SHOULD READ THIS BOOK Those involved or who intend to get involved in the design of software for real time systems It is written with both software and hardware engineers in mind being suitable for students and professional engineers
