Reasoning Necessity And Logic:

Reasoning, Necessity, and Logic Willis F. Overton, 2013-05-13 A presentation of current work that systematically explores and articulates the nature origin and development of reasoning this volume s primary aim is to describe and examine contemporary theory and research findings on the topic of deductive reasoning Many contributors believe concepts such as structure competence and mental logic are necessary features for a complete understanding of reasoning As the book emanates from a Jean Piaget Symposium his theory of intellectual development as the standard contemporary treatment of deductive reasoning is used as the context in which the contributors elaborate on their own perceptions

Rationality and Logic Robert Hanna, 2009-01-23 An argument that logic is intrinsically psychological and human psychology is intrinsically logical and that the connection between human rationality and logic is both constitutive and mutual In *Rationality and Logic* Robert Hanna argues that logic is intrinsically psychological and that human psychology is intrinsically logical He claims that logic is cognitively constructed by rational animals including humans and that rational animals are essentially logical animals In order to do so he defends the broadly Kantian thesis that all and only rational animals possess an innate cognitive logic faculty Hanna s claims challenge the conventional philosophical wisdom that sees logic as a fully formal or topic neutral science irreconcilably separate from the species or individual specific focus of empirical psychology Logic and psychology went their separate ways after attacks by Frege and Husserl on logical psychologism the explanatory reduction of logic to empirical psychology Hanna argues however that despite the fact that logical psychologism is false there is an essential link between logic and psychology Rational human animals constitute the basic class of cognizers or thinkers studied by cognitive psychology given the connection between rationality and logic that Hanna claims it follows that the nature of logic is significantly revealed to us by cognitive psychology Hanna s proposed logical cognitivism has two important consequences the recognition by logically oriented philosophers that psychologists are their colleagues in the metadiscipline of cognitive science and radical changes in cognitive science itself Cognitive science Hanna argues is not at bottom a natural science it is both an objective or truth oriented science and a normative human science as is logic itself

Necessary Knowledge Leslie Smith, 2017-12-06 Originally published in 1993 this monograph addresses a central problem in Piaget s work which is the temporal construction of necessary knowledge The main argument is that both normative and empirical issues are relevant to a minimally adequate account of the development of modal understanding This central argument embodies three main claims One claim is philosophical Although the concepts of knowledge and necessity are problematic there is sufficient agreement about their core elements due to the fundamental difference between truth value and modality Any account of human rationality has to respect this distinction The second claim is that this normative distinction is not always respected in psychological research on the origins of knowledge where emphasis is placed on the procedures and methods used to gain good empirical evidence An account of the initial acquisition of knowledge is not thereby an account of its legitimation in the

human mind The third claim relates to epistemology Intellectual development is a process in which available knowledge is used in the construction of better knowledge The monograph identifies features of a modal model of intellectual construction whereby some form of necessary knowledge is always used Intellectual development occurs as the reduction of modal errors through the differentiation and coordination of available forms of modal understanding Piaget's work continues to provide distinctive and intelligible answers to a substantive and outstanding problem **The Handbook of Life-Span**

Development, Volume 1 Richard M. Lerner, Willis F. Overton, 2010-12-14 In the past fifty years scholars of human development have been moving from studying change in humans within sharply defined periods to seeing many more of these phenomenon as more profitably studied over time and in relation to other processes The Handbook of Life Span Development Volume 1 Cognition Biology and Methods presents the study of human development conducted by the best scholars in the 21st century Social workers counselors and public health workers will receive coverage of of the biological and cognitive aspects of human change across the lifespan *Piaget's Theory* Harry Beilin, Peter B. Pufall, 2013-04-15 This volume marks the 20th Anniversary Symposium of the Jean Piaget Society Some of the American contributors were among the first to introduce Piaget to developmental and educational psychology in the United States while some of the international contributors worked with Piaget to develop his program of genetic epistemology and continue to make significant contributions to it Within this volume the possibility of Piaget's paradigm is reviewed not only as the stuff of normal science yielding fascinating empirical questions that linger within it but also and more importantly as the stuff of revolutionary science with continuing potential to comprehensively structure our thinking about developmental theory The constructive contribution Piaget's theory has for developmental theory emerges as four central themes in the volume understanding the intentional or semantic aspect of mental life without abandoning the Piagetian assumption that is rational and committed to truth testing examining mental life and its development as a dialectical relation of function and structure a relation Piaget introduced in his study of the developmental relation between procedural and operational knowledge exploring new and interdisciplinary perspectives on equilibration as the driving force of constructive adaptive processes understanding social and historical forces in individual and cultural development not necessarily as forces antithetical to Piaget's perspective but as forces that take on new meaning within his framework which avoids erroneous dichotomies such as the distinction between subjective and objective knowledge **Handbook of Child Psychology and Developmental Science, Cognitive Processes**, 2015-03-31 The essential reference for human development theory updated and reconceptualized The Handbook of Child Psychology and Developmental Science a four volume reference is the field defining work to which all others are compared First published in 1946 and now in its Seventh Edition the Handbook has long been considered the definitive guide to the field of developmental science Volume 2 Cognitive Processes describes cognitive development as a relational phenomenon that can be studied only as part of a larger whole of the person and context relational system that sustains it In

this volume specific domains of cognitive development are contextualized with respect to biological processes and sociocultural contexts Furthermore key themes and issues e g the importance of symbolic systems and social understanding are threaded across multiple chapters although every each chapter is focused on a different domain within cognitive development Thus both within and across chapters the complexity and interconnectivity of cognitive development are well illuminated Learn about the inextricable intertwining of perceptual development motor development emotional development and brain development Understand the complexity of cognitive development without misleading simplification reducing cognitive development to its biological substrates or viewing it as a passive socialization process Discover how each portion of the developmental process contributes to subsequent cognitive development Examine the multiple processes such as categorizing reasoning thinking decision making and judgment that comprise cognition The scholarship within this volume and as well across the four volumes of this edition illustrate that developmental science is in the midst of a very exciting period There is a paradigm shift that involves increasingly greater understanding of how to describe explain and optimize the course of human life for diverse individuals living within diverse contexts This Handbook is the definitive reference for educators policy makers researchers students and practitioners in human development psychology sociology anthropology and neuroscience

Thinking of Necessity Jessica Leech, 2023 Jessica Leech sets out a Kant inspired theory of modality i e possibility and necessity She argues that we need logical modal concepts as a condition on our ability to think and metaphysical modal concepts as a condition on our ability to think about the world Necessity has its source in the laws of thought and the conditions of thought

Development of Mental Representation Irving E. Sigel, 2013-06-17 There is a general and extensive literature in the development of representational thought and symbolic processes because of its centrality in human evolution However the umbrella of science and its method does not necessarily lead to a coherent conceptual model or agreements among scholars These basic differences among various disciplines have led to the creation of new and exciting realms of research This book

considers how representational or symbolic thought develops for children's use in a wide array of these circumstances

From Is to Ought: The Place of Normative Models in the Study of Human Thought Shira Elqayam, David E.

Over, 2016-08-12 In the study of human thinking two main research questions can be asked Descriptive Q What is human thinking like Normative Q What ought human thinking be like For decades these two questions have dominated the field and the relationship between them generated many a controversy Empirical normativist approaches regard the answers to these questions as positively correlated in essence human thinking is what it ought to be although what counts as the ought standard is moot In contemporary theories of reasoning and decision making this is often associated with a Panglossian framework an adaptationist approach which regards human thinking as a priori rational In contrast prescriptive normativism sees the answers to these two questions as negatively correlated Normative models are still relevant to human thought but human behaviour deviates from them quite markedly with the invited conclusion that humans are often irrational Prescriptive normativism often results in a Meliorist agenda which sees rationality as amenable to education Both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking Following Hume's strict divide between the is and the ought descriptivism regards the descriptive and normative research questions as uncorrelated or dissociated with only the former question suitable for psychological study of human behaviour This basic division carries over to the relation between normative ought rationality based on conforming to normative standards and instrumental is rationality based on achieving one's goals Descriptivist approaches regard the two as dissociated whereas normativist approaches tend to see them as closely linked with normative arguments defining and justifying instrumental rationality This research topic brings together diverse contributions to the continuing debate Featuring contributions from leading researchers in the field the e book covers a wide range of subjects arranged by six sections The standard picture Normativist perspectives In defence of soft normativism Exploring normative models Descriptivist perspectives Evolutionary and ecological accounts Empirical reports With a total of some 24 articles from 55 authors this comprehensive treatment includes theoretical analyses meta theoretical critiques commentaries and a range of empirical reports The contents of the Research Topic should appeal to psychologists linguists philosophers and cognitive scientists with research interests in a wide range of domains from language through reasoning judgment and decision making and moral judgment to epistemology and theory of mind philosophical logic and meta ethics
