Advances in Integrated Design and Manufacturing in Mechanical Engineering II Serge Tichkiewitch, M. Tollenaere, Pascal Ray, 2010-04-02 The 33 papers presented in this book were selected from amongst the 97 papers presented during the sixth edition of the International Conference on Integrated Design and Manufacturing in Mechanical Engineering during 28 sessions Two keynote papers one presented by Professor Stephen Lu from the IMPACT Research Laboratory University of Southern California USA on Supporting participative joint decisions in integrated design and manufacturing teams and one written by Professor Stefan Rudolph from Stuttgart University about Know How Reuse in the conceptual design phase of complex engineering products or Are you still constructing manually or do you generate already automatically introduce the subject of the Conference and are followed by the different themes highlighted during the conference The design manufacturing interface Integrated design of manufacturing processes Life cycle design and manufacturing approaches Agility in design and manufacture Knowledge in engineering and Management in production systems

Methods and Tools for Co-operative and Integrated Design Serge Tichkiewitch, Daniel Brissaud, 2013-03-14 SMC COLOMBIER FONTAINE is a company in the AFE METAL group which uses a sand casting process to manufacture steel primary parts To reduce the time to market primary part producers need to reduce the time and cost of the industrialisation process These factors in addition to the global goal of improving process performance levels brought SMC to develop numerical technologies and traceability from quotation to part delivery 1 Nowadays these improvements are incorporated into company culture The next step in reducing the time and cost of the production process is to introduce a complete methodology of use and experience feedback of these new models and methods To be able to generalise this approach a CAD methodology is essential and thus becomes a step in the industrialisation process The amount of improvements engendered by the numerical technologies largely justifies the time investment made to obtain a numerical definition of all the different elements in the sand casting process 2 The objective of our approach is to optimise the product

and its production process by generating a complete numerical reference through the integration of quotation CAD simulation new manufacturing technologies and effective production processes **Product Life-Cycle Management** Max Giordano, Luc Mathieu, François Villeneuve, 2012-12-17 This book gives a comprehensive view of the most recent major international research in the field of tolerancing and is an excellent resource for anyone interested in Computer Aided Tolerating It is organized into 4 parts Part 1 focuses on the more general problems of tolerance analysis and synthesis for tolerancing in mechanical design and manufacturing processes Part 2 specifically highlights the simulation of assembly with defects and the influence of tolerances on the quality of the assembly Part 3 deals with measurement aspects and quality control throughout the life cycle Different measurement technologies and methods for estimating uncertainty are considered In Part 4 different aspects of tolerancing and their interactions are explored from the definition of functional requirement to measurement processes in a PLM approach *Biomechanics* Ghias Kharmanda, Abdelkhalak El Hami, 2017-02-13 In this book the authors present in detail several recent methodologies and algorithms that they developed during the last fifteen years The deterministic methods account for uncertainties through empirical safety factors which implies that the actual uncertainties in materials geometry and loading are not truly considered This problem becomes much more complicated when considering biomechanical applications where a number of uncertainties are encountered in the design of prosthesis systems This book implements improved numerical strategies and algorithms that can be applied to biomechanical studies

Structural Synthesis of Parallel Robots Grigore Gogu, 2009-05-01 This is the first book of robotics presenting solutions of uncoupled and fully isotropic parallel robotic manipulators and a method for their structural synthesis Part 1 presents the methodology proposed for structural synthesis Part 2 presents the various topologies of parallel robots generated by this systematic approach Many solutions are presented here for the first time The book will contribute to a widespread implementation of these solutions in industrial products *Handbook of Research on Design and Management of Lean Production Systems* Modrák, Vladimír, Šemančo, Pavol, 2014-01-31 This book explores the recent advancements in the areas of lean production management and the system and layout design for manufacturing environments capturing the building blocks of lean transformation on a shop floor level *Dynamic Failure of Composite and Sandwich Structures* Serge Abrate, Bruno Castanié, Yapa D. S. Rajapakse, 2012-11-02 This book presents a broad view of the current state of the art regarding the dynamic response of composite and sandwich structures subjected to impacts and explosions Each chapter combines a thorough assessment of the literature with original contributions made by the authors The first section deals with fluid structure interactions in marine structures The first chapter focuses on hull slamming and particularly cases in which the deformation of the structure affects the motion of the fluid during the water entry of flexible hulls Chapter 2 presents an extensive series of tests underwater and in the air to determine the effects of explosions on composite and sandwich structures Full scale structures were subjected to significant explosive charges and such results are extremely rare in the

open literature Chapter 3 describes a simple geometrical theory of diffraction for describing the interaction of an underwater blast wave with submerged structures The second section addresses the problem of impact on laminated composite structures with chapters devoted to ballistic impacts on pre stressed composite structures tests developed to simulate dynamic failure in marine structures damage mechanisms and energy absorption in low velocity impacts perforation the numerical simulation of intra and inter ply damage during impact and hail impact on laminated composites Sandwich structures with laminated facings are considered in Section 3 with chapters dealing with the discrete modeling of honeycomb core during the indentation of sandwich structures the behavior of fold core sandwich structures during impact and impact on helicopter blades The fourth section consists of two chapters presenting experimental results and numerical simulation of composite structures subjected to crash This volume is intended for advanced undergraduate and graduate students researchers and engineers interested and involved in analysis and design of composite structures
