molecule nanosensing The ability to sense single molecules and to precisely monitor and control their motion is crucial to build a microscopic understanding of key processes in nature from protein folding to chemical reactions Recently a range of new techniques have been developed that allow single molecule sensing and control without the use of fluorescent labels This volume provides an overview of recent advances that take advantage of micro and nanoscale sensing technologies and provide the prospect for rapid future progress The book endeavors to provide basic introductions to key techniques recent research highlights and an outlook on big challenges in the field and where it will go in future It is a valuable contribution to the field of single molecule nanosensing and it will be of great interest to graduates and researchers working in this topic

Chromatographic and Membrane Processes in Biotechnology C.A. Costa, Joaquim S. Cabral, 2012-12-06 Separation processes in biotechnology are of increasing industrial importance since they entail the major costs of bioprocessing especially when high purity is required Chromatography and membranes are two of the most important technologies used for direct treatment of fermentation broths as well as for high resolution steps in product purification The theoretical foundations of chromatographic and membrane processes are well understood for the case of small molecules Nevertheless there is a need to adapt and further develop that knowledge to the processing of large biological molecules This is being achieved with the contribution of other areas like molecular biology and materials science The objective of this NATO Advanced Study Institute is to present an updated treatment of the fundamentals of chromatographic and membrane processes with special relevance in bioprocessing This volume collects the lectures presented at this Institute The lectures are arranged in five chapters Chapter 1 deals with chromatographic processes covering topics like equilibrium kinetics and contacting devices Membrane processes and some applications in biotechnology are treated in chapter 2 Chapter 3 is devoted to affinity chromatographic and membrane processes Chapter 4 considers the current developments on chromatographic supports and membranes both from the constitutive materials and from points of view Scale up optimization and reaction separation integration are the topics covered in chapter 5 We are very grateful to all lecturers and participants that made possible this Institute Financial support from NATO Scientific Affairs Division INIC JNICT FLAD University of Aveiro and DRT Aveiro is gratefully acknowledged

Physical Cleaning of Coal Y. A. Liu, 2018-01-18 This book provides a detailed account of recent developments in physical coal cleaning methods including Relative density Electrical conductivity Magnetic susceptibility surface chemistry characteristics *Preconcentration Techniques For Trace Elements* Zeev Alfassi, Chien M. Wai, 1991-12-07 Accurate determination of trace elements is critical in various fields of science and technology Direct measurement of trace elements in samples with complex matrices is often impractical either due to analytical sensitivity limitations or matrix interferences Preconcentration procedures are generally needed to eliminate matrix interferences and or enrich minute amounts of analytes to a level for reliable measurements

Preconcentration Techniques for Trace Elements provides up to date information on various preconcentration techniques and detailed discussions regarding such topics as the dissolution of matrices coprecipitation solvent extraction electrochemical means ion exchange sorption chromatographic methods flotation membranes volatilization polymer foam sorbents fire assay isotachopheresis and filter papers This comprehensive volume featuring contributions from 21 experts from nine countries will provide valuable reference material for all scientists and technicians dealing with trace analysis of real world samples
