Receptive Mechanisms Of Sound In The Ear:

Receptive Mechanisms of Sound in the Ear Yasuji Katsuki, 1982 *Neuronal Mechanisms of Hearing* Lindsay Aitkin, 2012-12-06 In contrast to the level of interest which is paid to the organization of meetings about the structure and function of the auditory periphery the central auditory system has received little attention in the last several years However much recent data accumulated during this period has provided auditory physiologists with new ideas about the function of the central auditory system The successful exploration of new anatomical tracing techniques tritiated aminoacids horseradish peroxidase 2 deoxyglucose together with the collection of electrophysiological data obtained with intracellular and extracellular recordings from the receptors and neurones in the auditory pathway have considerably deepened our understanding of central auditory function Particular interest was concentrated upon the development of the auditory system under normal conditions and in conditions of auditory deprivation Although from the methodological point of view the conditions of reversible auditory deprivation are complicated promising new data appeared in this field Similarly the specific ability of the auditory system to encode communication signals and speech sounds has been examined in many laboratories all over the world A very fruitful method based upon the results of electrical stimulation of cochlear nerve fibres in experimental animals is the application of neuroprostheses in deaf patients At the present time the method still does not meet all requirements and many improvements will be necessary Undoubtedly the exploration of the results of recent physiological experiments may help in the further improvement of neuroprostheses The Cerebral Computer Robert J. Baron, 2013-04-15 Viewing the human brain as the most complex and powerful computer known with a memory capacity and computational power exceeding the largest mainframe systems Professor Baron sets the groundwork for understanding the computational structure and organization of the human brain He provides the introductory framework necessary for this new and growing field of investigation and he discusses human vision mental imagery sensory motor functions audition affect and behavior Oto-rhino-laryngology for the Student and Practitioner Georges Laurens, 1919 Landmark Papers in Otolaryngology John S.
