Immunotoxins Arthur E. Frankel, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good indepth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by

asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more **Genetic Approaches to Microbial Pathogenicity** W. Goebel, 2012-12-06 **Monoclonal Antibodies to Receptors** M.F. Greaves, 2012-12-06 **Molecular Biology of Receptors and Transporters: Receptors**, 1993-02-16 This multi volume set within International Review of Cytology encompasses the recent advances in the understanding of structure function relationships at the molecular level of receptors transporters and membrane proteins Several diverse families of membrane receptors proteins are discussed with respect to the molecular and cellular biology of their synthesis assembly turnover and function Included are such receptor superfamilies as G proteins immunoglobulins ligand gated receptors interleukins and tyrosine kinases as well as such transporter protein families as pumps ion channels and bacterial transporters Each section of each volume features a perspectives commentary chapter which includes comments on the recent advances and predictions on new directions Written by acknowledged experts in the field this volume 137B highlights the recent developments in receptors
