Introduction

- To provide performance for programs written in HLLs: simpler implementation without the use of microcode
- IBM in 1975 : minicomputer known as the 801 (ECL)
- Berkeley in 1980 : VLSI processors RISC I, RISC II
- Stanford in 1981 : MIPS chip

The Effectiveness of a Computer Architecture

- How well it can be used to carry out an application and the performance attainable by implementations of that architecture in various technology
- The performance of an implementation running a particular benchmark

$$Performance = \frac{1}{\text{No of Instructions} \times \text{cycle time} \times \frac{\text{cycles}}{\text{Instruction}}}$$

Reduced Instruction Set Computer Architectures for VLSI M. G. H. Katevenis, 1983 The architectural study and evaluation of RISC II as well as its design layout and testing after fabrication have shown the viability and the advantages of the RISC approach The RISC II single chip processor looks different from other popular commercial processors it has been less total transistors it spends only 10% of the chip area for control rather than one half to two thirds and it required about five times less design and lay out effort to get chips that work correctly and at speed on first silicon And on top of all that RISC II executes integer high level language programs significantly faster than these other processors made in similar technologies

TRON Project 1987 Open-Architecture Computer Systems Ken Sakamura, 2012-12-06 Almost 4 years have elapsed since Dr Ken Sakamura of The University of Tokyo first proposed the TRON the realtime operating system nucleus concept and 18 months since the foundation of the TRON Association on 16 June 1986 Members of the Association from Japan and overseas currently exceed 80 corporations The TRON concept as advocated by Dr Ken Sakamura is concerned with the problem of interaction between man and the computer the man machine inter face which had not previously been given a great deal of attention Dr Sakamura has gone back to basics to create a new and complete cultural environment relative to computers and envisage a role for computers which will truly benefit mankind This concept has indeed caused a stir in the computer field The scope of the research work involved was initially regarded as being so extensive and diverse that the completion of activities was scheduled for the 1990s However I am happy to note that the enthusiasm expressed by individuals and organizations both within and outside Japan has permitted acceleration of the research and development activities It is to be hoped that the presentations of the Third TRON Project Symposium will further the progress toward the creation of a computer environment that will be compatible with the aspirations of mankind
