

MANAGEMENT OF PATIENTS WITH VASCULAR DISORDERS AND PROBLEMS OF PERIPHERAL CIRCULATION

VASCULAR SYSTEM

- ⇒ Consists of two interdependent systems
 - Right side of the heart pumps blood through the lungs to the pulmonary circulation
 - Left side of the heart pumps blood to all other body tissues through the systemic circulation
- ⇒ Arteries and arterioles
- ⇒ Capillaries
- ⇒ Veins and venules
- ⇒ Lymphatic vessels

Copyright © 2009

Function of the Vascular System

- ⇒ Circulatory needs of tissues
- ⇒ Blood flow
- ⇒ Blood pressure
- ⇒ Capillary filtration and reabsorption
- ⇒ Hemodynamic resistance
- ⇒ Peripheral vascular regulating mechanisms

Pathophysiology of the Vascular System

- ⇒ Pump failure
- ⇒ Alterations in blood and lymphatic vessels
- ⇒ Circulatory insufficiency of the extremities

Systemic and Pulmonary Circulation

Gerontologic Considerations

- ⇒ Aging produces changes in the walls of the blood vessels that affect the transport of oxygen and nutrients to the tissues
- ⇒ Changes cause vessels to stiffen and results in:
 - Increased peripheral resistance
 - Impaired blood flow

- Increased left ventricular workload

Assessment of the Vascular System

- ⇒ Health history
 - Intermittent claudication
 - "Rest pain"
 - Location of the pain
- ⇒ Physical assessment
 - Skin (cool, pale, pallor, rubor, loss of hair, brittle nails, dry or scaling skin, atrophy, and ulcerations)
 - Pulses

One of the earliest symptoms of PAD may be intermittent claudication. This is leg discomfort, pain or numbness that occurs during exercise or when standing and is relieved by rest. The pain is most often noticed in the calf, but could occur in the thigh or the buttocks or the foot.

Diagnostic Evaluation

- ⇒ Doppler ultrasound flow studies
 - Ankle brachial index (ABI)
- ⇒ Exercise testing
- ⇒ Duplex ultrasonography
- ⇒ Computed tomography scanning
- ⇒ Angiography and magnetic resonance angiography
- ⇒ Contrast phlebography (venography)
- ⇒ Lymphoscintigraphy

Continuous-wave Doppler ultrasound detects blood flow; combined with computation of ankle or arm pressures, this diagnostic technique helps characterize the nature of peripheral vascular disease

Peripheral Arterial Occlusive Disease (PAD)

- ⇒ Hallmark symptom is intermittent claudication described as aching, cramping, or inducing fatigue or weakness
- ⇒ Occurs with some degree of exercise or activity
- ⇒ Relieved with rest
- ⇒ Pain is associated with critical ischemia of the distal extremity and is described as persistent, aching, or boring (rest pain)
- ⇒ Ischemic rest pain is usually worse at night and often wakes the patient

Surgical Complications: Diagnosis And Treatment Nadey S Hakim, Vassilios E Papalois, 2007-03-22 As Professor Owen H Wangensteen one of the greatest academic surgeons of the 20th century said You are a true surgeon from the moment you are able to deal with your complications Prompt and accurate diagnosis as well as effective treatment of surgical complications is one of the most important elements of surgical practice This is today more important than at any other time since over the last 20 years we have witnessed the development of new surgical sub specialties the performing of complicated operations in very challenging patients the introduction of new technologies in surgical practice and last but not least an increasing interest in monitoring the quality medico legal implications and ethical dimensions of surgical practice and malpractice As surgical complications have been presented briefly and sporadically in various books and only as a small part of chapters dealing with surgical techniques there is a pressing need for a modern textbook dealing with the diagnosis treatment auditing medico legal implications and ethical problems related to surgical complications Written by internationally known authors the chapters deal with both the general issues regarding the surgical complications and the specific issues related to each surgical specialty Each chapter includes clinical presentation diagnosis clinical laboratory investigations imaging treatment conservative surgical and outcome a

[Complications in Vascular and Endovascular Surgery](#) Jonathan J Earnshaw,, Michael Wyatt, 2012-01-01 The aim of this book is to help clinicians to reduce the risk of

complications after vascular and endovascular surgery Whilst it is a surgical truism that the surgeon who does the most operations has the most complications an acknowledgement of the fact that all vascular and endovascular procedures are potentially hazardous and some extremely so some surgeons seem to have more complications than others This book is for all surgeons and radiologists who accept the challenge continually to improve their results Each chapter is authored by an experienced endo vascular specialist who will have witnessed firsthand the perils and pitfalls of vascular procedures They have seen all the complications and even occasionally made errors of judgement The chapters are full of information to help the reader avoid similar hazards in future We live in a world of high patient expectation where complications are seen as someone's fault Clinicians are familiar with innovations such as outcomes audit and assessment procedural governance and quality improvement programmes There is pressure to show progressive improvement First class surgery is a combination of knowledge and skill and perhaps just a little luck though as is oft quoted the more you practice the luckier you get The information in this book will provide insights protocols and tips and tricks to minimise the risks of procedures in vascular and endovascular surgery It is therefore essential reading for anyone who treats patients with vascular disease
