Prostaglandins P. B. Curtis-Prior, 1976 Aliphatic and Related Natural Product Chemistry Frank D

Gunstone, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry, they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles; some have been combined under a new name, whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Prostaglandins and the Kidney Michael Dunn, 2013-11-11. In June 1981 we conducted a two-day international symposium in Rome devoted to original scientific presentations on arachidonic acid metabolism in the kidney. Scientists from 20 countries were represented either in the general scientific program or in the poster presentation. This book does not represent the proceedings of this international gathering but rather the edited manuscripts specifically prepared as summaries of the scientific presentations. We feel that the timeliness and originality of the contributions, as well as the need for a compilation of existing work on prostaglandins, thromboxane and the kidney, warrant this publication. The meetings would have been impossible without the generous and substantial support of the Italian government, the National Institutes of Health, United States Public Health Service and Merck Sharp Dohme. International Supplementary support was also received from Ciba-Geigy S.p.A., Ente Fiuggi Farmitalia, Carlo Erba S.p.A., Glaxo Laboratori S.p.A., Hoechst Italia S.p.A., Leo Pharmaceutical Products, Pfizer Italiana S.p.A., Sigmata S.p.A., Squibb S.p.A., The Upjohn Company, Wellcome Italia S.p.A. and Burroughs Wellcome Company. The efficient organization of the symposium was largely attributable to the superb efforts of Elisabeth Mutschlechner and Miki Scarinci of C.K. International, Rome. Linda Goldberg provided expert and invaluable editorial and secretarial assistance in the organization of this book. The book is divided into four major sections comprising I

Prostaglandins in Cancer Research Enrico Garaci, Rodolfo Paoletti, M. Gabriella Santoro, 2012-12-06 Arachidonic acid metabolites are known to play a regulatory role in a number of biological systems in which they function as microenvironmental hormones and intracellular signal mediators One of the most exciting areas of research of these compounds is the one that studies the relationship between prostaglandins and tumor cell growth and function In the last few years there has been an extraordinary evolution of data on prostaglandins and related compounds and cancer This volume is based on papers presented at the 1986 International Conference on Prostaglandins and Cancer organized by the Italian National Research Council and the II University of Rome and held in Rome Italy in June 1986 This Conference brought together oncologists and

specialists in the areas of prostaglandin chemistry biochemistry pharmacology physiology cellular and molecular biology to overview the actual state of knowledge on the role of eicosanoids in cancer and to focus on the key questions that need to be answered The picture that comes out of this book describes a very complicated network of interactions between arachidonic acid metabolites and different aspects of the complex phenomenon cancer Eicosanoids participate in carcinogenesis initiation and promotion and their relationship with tumor promoters and growth factors is well established During cancer growth different prostaglandins can have different roles in the regulation of cell proliferation and differentiation and in metastasis formation meanwhile evidence is accumulating for a possible use of some of these compounds as antineoplastic agents
