Border-Regional Economics Rongxing Guo, 2013-06-29 This research work is to commemorate all Guos ancestor who guarded the border for his Majesty dutifully and who is the foremost supporter in my academic career For the past decades economists and geographers from both developed and developing countries have studied the economic issues either within individual countries regions or between countries regions Only a relatively small part of these efforts has been focused on the economic affairs of those countries regions peripheral areas and even less attention has been given to the structural analysis of economic mechanisms of the border regions with different political levels and compositions My interest in border regions more or less directly relates to some personal reasons of mine The Chinese family name Guo means a guard for an outer city wall herein it used to be a political and military border in ancient China e g the Chinese Great Wall It is more interesting that Guo is written with a different Chinese character from that used for the like sounding Guo country The Chinese writing of the latter is a square frame inside which lies a Chinese character Wang king in the centre and a point in the corner It might be simply supposed that the point was used by the inventor to necessarily represent the border guard probably because of its vital importance to the country

Regional Analysis and Regional Policy William H. Miernyk, 1982

Regional Economic Problems A. J. Brown, E. M. Burrows, 2017-08-25 Originally published in 1977 This book provides the first concise non technical account of what the main

kinds of regional problems are how they arise and the kinds of policy which have been used to tackle them in the UK USA and Western Europe The book starts with a discussion of why regional problems really are situations which call for special action followed by a short preliminary classification of problem regions including those in the less developed countries then on to a more detailed survey of the origins and experience of selected problem regions in the more developed market economies The authors focus on four broad kinds of problem region agricultural regions coal mining regions old textile regions and so called congested regions They conclude with a selective survey of regional policies in these more advanced economies distinguishing and comparing the main trends and the different national styles The New Regional Economies William R. Barnes, Larry C. Ledebur, 1998 The politics and economics of the United States are wedded in the political economy of the nation state and the nationalist economic policies This nationalist paradigm is however showing the following signs of fatigue the role of the nation state is diminishing as the economy globalizes US national accounting systems are less effective technology forces change trading blocs are emerging there is less control of exchange rates regional economies are restructuring and competitive environments are changing This book proposes that political jurisdictions are not economies but polities and explores the complex and important economic implications of this thesis **The Regional Economics of Technological Transformations** Roberta Capello, Camilla Lenzi, 2021-08-30 The Regional Economics of Technological Transformations provides a comprehensive overview of 4 0 technological transformations in Europe and their socio economic impact with a particular emphasis on the regional dimension of the phenomena The authors employ extensive original data and robust quantitative methods to analyse technological change in all regions of the 27 EU countries plus the UK and shed light on this trend for Europe and beyond Structured in four parts the book first looks at conceptual definitions empirical measurements and expected impacts on both the economic performance GDP and productivity growth and the labour market and then moves on to analyse where 4 0 technological transformation actually takes place in Europe and the reasons for this Next it offers original empirical evidence on the impacts of the different transformations and of their intertwined effects on both the economy and the society Finally the book explores the policy implications of this technological transformation This book will be valuable reading for advanced students researchers and policymakers working across regional economics industrial economics and innovation policy It will be of primary interest to regional scientists interested in the field who may enjoy the conceptual and empirical solutions to the study of a very complex timely and still largely unexplored theme Sociologists engineers and political economists can benefit from the book s analysis noting the urgency of the development of new ethical rules governing the new digital and labour markets Finally the book may appeal to policymakers interested in opportunities to increase regional competitiveness and sustainability goals through the advent of 4 0 technologies *Urban and Regional Economics* M. Jarvin Emerson, F. Charles Lamphear, 1975 Alex s father misses her birthday party and everything is spoiled until the animals on his gift of a tiny carousel come to life **Regional Economics: Fundamental**

Concepts, Policies, And Institutions Iwan Jaya Azis, 2020-01-06 Regional Economics Fundamental Concepts Policies and Institutions is a unique and unconventional economics textbook which emphasizes the role of space in economics and highlights the importance of non economic factors particularly the role of institutions in regional development It also presents the approach on how to evaluate regional development performance based on economic social and environmental considerations which is the organizing principle for meeting people oriented development and sustainable development goals Other essential concepts such as regional science and spatial economics are also explored in this book Why activities tend to be spatially concentrated and can get more intensified despite efforts to disperse them toward other regions Why infrastructure development intended to increase activities and improve the population s welfare can produce the opposite outcome of greater interregional inequality What is the role of regional and national policies in affecting growth incentives and how non economic factors such as institutions and the quality of local leaders can make a difference in welfare achievement Addressing these questions allows readers to better understand the various phenomena in the actual development process
